

STYROFOAM Extruded Rigid Foam Insulation

From the lofty J. Paul Getty Museum in Los Angeles and the Tate Gallery of Modern Art in London, to the "simple, decent homes" built around the world by Habitat for Humanity International, STYROFOAM* Brand Insulation is the preferred insulation.

Invented by Dow more than 50 years ago and identified worldwide by its distinctive Blue* color, STYROFOAM Brand Insulation is the most widely recognized brand name in insulation today. An exclusive manufacturing process delivers an unsurpassed, long-term resistance to conductive heat loss.

Our extensive product line covers almost any application, from basements and foundations to cathedral ceilings and rooftops. There is one place you won't find STYROFOAM Brand Insulation, and that's in coffee cups, coolers, meat trays and other generic foam products. These disposable products are made of either molded expanded polystyrene beads or thin extruded polystyrene sheet, neither of which is manufactured by Dow in the United States. STYROFOAM is a registered trademark of Dow for its insulation materials and floral and craft foam.

Whether your priceless treasures are Monets or your mom, you can count on STYROFOAM Brand Insulation for comfort and energy savings.
