BuildSite Launches Green Data, Integrating LEED® and Environmental Product Information with Project Management and Design

Oakland, CA (November 11, 2009) -- BuildSite, a single source of product, technical, and procurement information for construction, is announcing the launch of BuildSite Green Data at the 2009 Greenbuild International Conference and Expo. Green Data offers a searchable database of green building materials combined with online templates for LEED product submittals. Submittal templates are based on the US Green Building Council's LEED Online reporting requirements.

Green Data enhances BuildSite's industry leading database of over 20,000 construction products from over 300 manufacturers. Green Data users are able to sort product information by specific green attributes, such as VOC content, recycled material content, manufacturing location, SRI value, and more. LEED credit browse and advanced parameterized search complete the offering. BuildSite's Distributor Directory helps users find local sources for green materials.

"BuildSite's users, architects, specifiers, consultants, subcontractors, and suppliers, believe in green building," said Ned Trainor, President of BuildSite. "They also find the product search and submittal process time consuming and inefficient. By eliminating painful steps and tying with Building Information Management (BIM) models and project management software, Green Data will make its contribution to making green building part of mainstream construction."

BuildSite would like to acknowledge the help of a special group of LEED experts and consultants, both designers and builders, who helped us to conceptualize and design Green Data. Green Data is available immediately at www.buildsite.com.

About BuildSite
BuildSite provides a single source of product, technical, procurement, and green product information to the construction industry worldwide. The BuildSite database features over 20,000 products from more than 300 manufacturers, along with a Distributor Directory of over 700 locations. BuildSite also offers software tools for construction submittals, allowing data from the supply chain to flow into project management and 3D Building Information Management (BIM) design models. BuildSite Green Data, a next generation database of environmental and LEED® data for construction products, includes online submittal templates tied to the requirements of the US Green Building Council. Visit BuildSite at www.buildsite.com.
