

Bamboo Hardwoods' LOFT line of bamboo flooring is the perfect solution for any interior space. The boards of our LOFT line are cross-laminated for added stability and are precision milled with square edges so there are no "v-grooves" to trap dirt. The tight, positive fit of the boards provides a modern feel to an already eco-friendly floor.

Our LOFT line is known as a floating floor, which allows for installation over in-floor radiant heating systems, as well as over concrete slab and in basements. A floating installation will also allow the use of acoustical underlayment, which will reduce noise transmission within the room, and to surrounding rooms. Finally, this floor is also compatible with the traditional nail-down installation method.

Pre-finished with a durable, long-lasting finish, our LOFT line will save you the hassle of having to finish the floor yourself, now or in the future. Every pre-finished floor comes with a 25-year warranty that guarantees the finish will not fail within 25 years (under normal use, see Warranty for complete details).

Our Solid (Pre-finished) Bamboo Flooring offers a distinctive, traditional plank look combined with the smart choice of rapidly renewable bamboo. The micro-beveled edge milled into the boards of our Solid (Pre-finished) Bamboo Flooring offers the visual distinction of a traditional hardwood plank that has been loved for interior spaces for decades.

This floor is available in several color and grain combinations including: horizontal grain or vertical grain, and blonde or carbonized colors. Blonde is the natural color of the bamboo and offers lighter toned floors that will darken slightly over time. Carbonized is an amber color that adds warmth to any room, and will lighten over time.

Pre-finished with a durable, long-lasting finish, our Solid (Pre-finished) Bamboo Flooring will save you the hassle of having to finish the floor yourself, now or in the future. Every pre-finished floor comes with a 25-year warranty that guarantees the finish will not fail within 25 years (under normal use, see Warranty for complete details).

Warranty

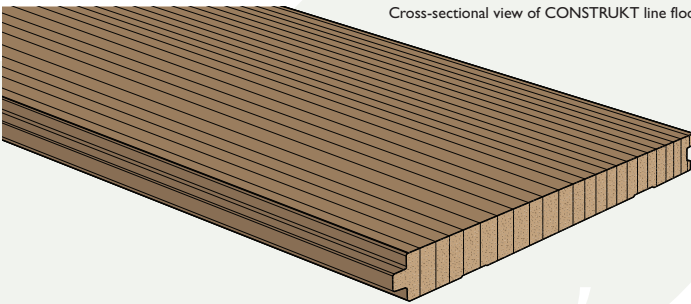

25yr residential warranty against finish wear-through (5yr commercial). Lifetime warranty against manufacturer defects.

HYBRID line bamboo flooring is one of the the hardest wood floors on the market today. An extremely hard floor that is difficult to dent, Bamboo Hardwoods' HYBRID line has a Janka hardness rating of over 3000. It is Ideal for high-traffic residential and commercial applications.

Our HYBRID line is known as a floating floor, which allows for installation over in-floor radiant heating systems, as well as over concrete slab and in basements. A floating installation will also allow the use of acoustical underlayment, which will reduce noise transmission within the room, and to surrounding rooms. Finally, this floor is also compatible with the traditional nail-down installation method.

Pre-finished with a durable, long-lasting finish, our HYBRID line will save you the hassle of having to finish the floor yourself, now or in the future. Every pre-finished floor comes with a 25-year warranty that guarantees the finish will not fail within 25 years (under normal use, see Warranty for complete details).

Our CONSTRUKT line floors are ideal for the type of person who wants the look of a traditional hardwood floor that has been finished on-site. These floors are crafted with solid strips of bamboo, and have straight edge milling to offer a sleek, modern look. Once installed, they offer a smooth, continuous surface which can be customized with a stain, or finished as is.

This floor is available in two colors: blonde or carbonized. Blonde is the natural color of the bamboo and offers lighter toned floors that will darken slightly over time. Carbonized is an amber color that adds warmth to any room, and will lighten over time.

Our hardest ARCADE line made with compressed bamboo on a Uniclic HDF core. Our ARCADE line of bamboo flooring is the hardest wood floor on the market today. It is created by combining strands of bamboo into a unique, organic pattern then compressed under tons of pressure. This results in an extremely dense floor and hard floor that is difficult to dent. It's Janka Hardness Rating is over 3000 (Oak is about 1300 on the same scale). ARCADE line bamboo flooring is ideal for high-traffic residential and commercial applications.

The ARCADE line of bamboo floors are created using an easy-to-install Uniclic system that makes installation, literally, a snap. Few tools are required when installing this floor as the self-locking edges hold the floor together. Our ARCADE line is milled with micro-beveled edges that offer a traditional plank appearance.
