

Energy efficiency...Looks...Longevity...Dryvit!

Today's high performance building exterior demands continuous insulation, engineered, all weather performance, and an attractive life cycle cost. Dryvit Outsulation systems provide all three.

A high performance insulated exterior cladding system requires a 21st century appearance – and Dryvit has developed a variety of finish options that offer the look of stucco, limestone, granite, metal, and brick.

If you can design it, it is highly likely that Dryvit can meet your performance AND aesthetic requirements.

Dryvit Outsulation systems with a specialty finish... demonstrably superior...

Energy efficiency – Outsulation systems meet the continuous insulation requirements of the 2009 IECC, ASHRAE 189.1, California Title 24, and can contribute significantly to LEED 3.0 certification.

Cost effective – An Outsulation system weighs a fraction of other heavier claddings allowing for savings in concrete, structural steel, and transportation.

Visual appeal – A wide range of textures, finishes, colors and techniques are available for maximum curb appeal.

Availability – Five North American manufacturing locations and over 150 distribution outlets ensure all material on the job within days. Custom samples are never a problem.

Cost effective – Entire cladding and various finishes all installed by a single contractor, with single source manufacturer warrantu!

Quality – All Dryvit manufacturing facilities are ISO 9001:2008 and 14001:2004 certified.

Environmental sustainability – NIST LCA shows Outsulation systems have a smaller environmental impact than other common claddings*

After 2000 years ... a better brick!

Custom

Manufacturing and transporting clay brick is energy intensive. On the jobsite, it has to be combined (by several contractors) with substrate protection and insulation (supplied by others) and there is no 'single source' responsibility or warranty for the performance of the wall. A Dryvit Outsulation system with Custom Brick finish provides an environmentally superior, simpler, cost effective alternative, from a single source. Now that's a better brick!

Private Residence Chicago, IL

University Dormitory Complex Reno, NV

Used Wall Brick

Dryvit Custom Brick comes in a variety of standard 'templates' -

but we can also match an existing building or locally preferred pattern or brick size. Combine this design flexibility with an infinite selection of colors, textures and shading techniques, your building exterior can look EXACTLY the way you want!

Elegant and Distinctive

LYMESTONE

Similar to brick, limestone is another heavy material from a bygone era that is energy intensive to harvest, shape and transport.

Lymestone finish by Dryvit, however, is not.

Lymestone finish is comprised of natural minerals, blended with 100% acrylic polymers and long lasting pigments, and is readily available in an infinite color selection.

Lymestone

On larger wall surfaces, EPS shapes and aesthetic reveals are commonly used to yield a realistic limestone effect

Custom Brick & Lymestone

The smooth Lymestone finish complements Dryvit Custom Brick – the better brick.

Tuscan Glaze over Lymestone Finish

Lymestone is the perfect finish on which to apply Dryvit Tuscan Glaze – resulting in an old world plaster appearance.

TERRANEO°

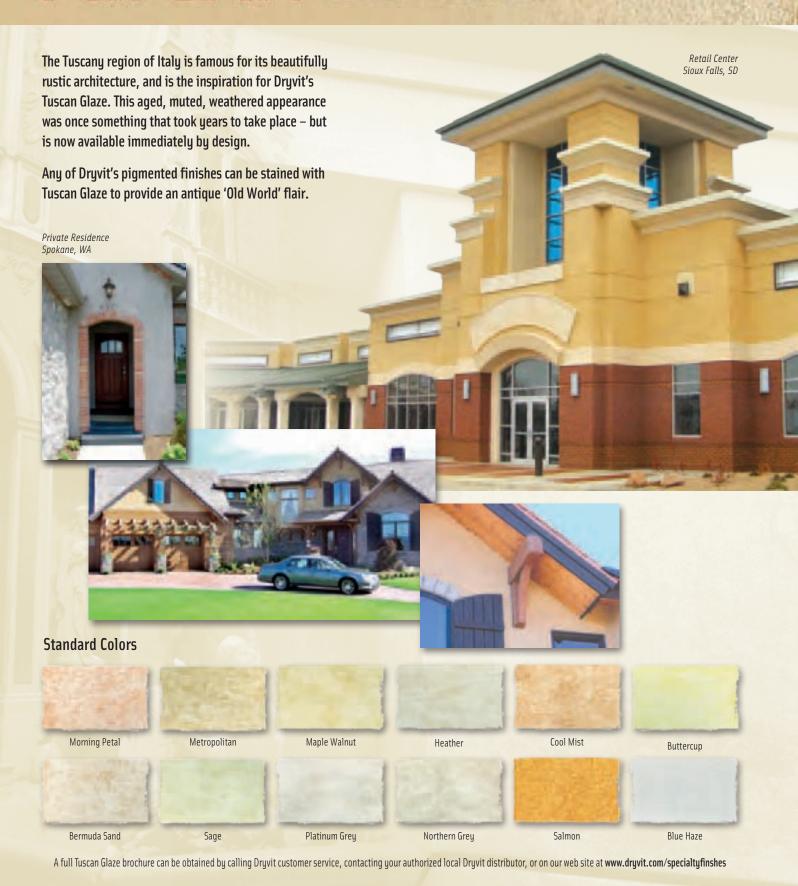

'Solid'...'Stately'...'Monumental' all describe buildings made of granite. Granite, like brick and limestone, is heavy and energy intensive to find, produce, and transport. To accommodate its weight, a building also requires more concrete and steel structural support – adding to the cost and environmental footprint of the project.

Mica Colors: Available in silver/white, gold and black.

Add Mediterranean Subtlety and Distinction to Your Building

TUSCAN GLAZE"

Make your next project shine!

Reflectit

A shiny, reflective look can add sophistication to any façade. Metal is a great complement to other finishes, and until now there have been limited and expensive options for achieving this appearance. Dryvit's Reflectit coating, used as the finish for any Outsulation system, results in a lightweight, cost effective, energy efficient, engineered cladding.

An array of textures, including smooth, is available and color options are nearly limitless.

Dryvit Specialty Finishes: Design Flexibility and Performance Value

Lightweight, flexible, durable and highly energy efficient, Dryvit specialty finishes over an Outsulation system provides the greatest performance value available.

An Outsulation System with a Specialty Architectural Finish from Dryvit might be your solution! Incorporating an air barrier and continuous insulation, Outsulation system can be installed on the exterior of almost any building without structural modification and interruption to the commerce and activity

inside. This can help restore the building to 'as new' condition – or give it a totally new look – while upgrading its performance and energy efficiency to 'high performing' standards.
