ADVANCED STONE CARE

POULTICE PASTE

PRODUCT FEATURES

- ✓ The Glaze `N Seal *Poultice Paste* is used to remove stains that are set deep into the stone.
- ✓ Eliminate stains resulting from substances such as wine, coffee, tea, smoke, urine, and some oils.
- ✓ Creamy paste form for easy application.
- ✓ Environmentally responsible formulation. Nor harmful fumes or noxious odors.
- ✓ Appropriate for interior and exterior use.
- ✓ Will not harm adhesives or grouting materials.

PRODUCT DESCRIPTION

Glaze `N Seal *Poultice Paste* is a ready-to-use wet poultice requiring no mixing or measuring. The Poultice Paste consistency allows easy application to both vertical and horizontal surfaces. Poultice Paste may be used for outdoor or indoor application. Poultice Paste may be used on polished or unpolished surfaces without fear of discoloration or etching.

APPLICATION

- Apply 1/8" to 1/4" of *Poultice Paste* poultice in a uniform coat over stained area to encompass an area slightly larger than actual stain.
- Cover the poultice with foil or plastic wrap and tape down borders.
- Allow poultice to remain covered for 12-24 hours.
- After this period, remove covering and poultice (a slightly improved result may be obtained by removing the covering only and allowing the poultice to dry prior to removal).
- Inspect for any remaining stain and repeat procedure if necessary.*
- Clean thoroughly with Glaze `N Seal Stone Cleaner.

Additionally....

- *After removal of poultice, the stone may appear darker due to excess moisture content. When the stone dries, possibly over several days, the darkening will disappear.*
- ** for stronger stain removal action, apply household bleach to the stain area prior to applying the Poultice Paste.*

APPROXIMATE COVERAGE

Poultice Paste will cover 2 square feet per pound
