

STEEL STRONG-WALL®: 1st Story Wood Floor Systems

Steel Strong-Wall panels designed for use on concrete foundations can be used with wood floor systems by extending the anchor bolts and installing compression nuts and solid blocking below the wall.

MATERIAL & FINISH: See page 10.

! Load tables list values based upon results from the most recent testing and/or calculations and may not match those in current code reports. Where code jurisdictions apply, consult the current reports for applicable load values.

For product data and naming scheme information, see pages 10 and 11.

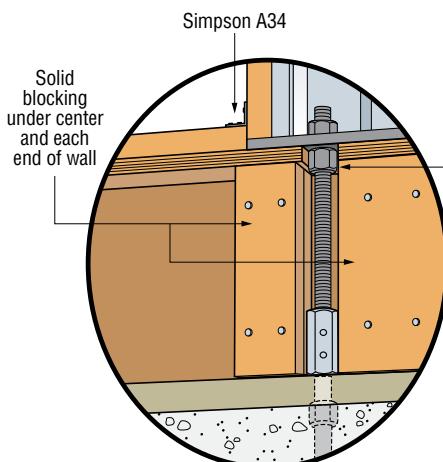

For a complete set of wall profile drawings, see page 10.

WOOD FIRST-FLOOR WALL CONNECTION KIT

Wall Width (in)	Model No.	Contents
12	SSW12-1KT	(1) Shear Transfer Plate (with #14 self-drilling screws)
15	SSW15-1KT	(2) 1"x18" Threaded Rods (A36)
18	SSW18-1KT	(2) Coupler Nuts
21	SSW21-1KT	(2) Heavy Hex Nuts
24	SSW24-1KT	Installation Instructions

1. Two heavy hex nuts included with each wall.

BLOCKING/CONNECTION DETAIL

(See detail 10/SSW2 on page 91 for perpendicular blocking where required)

Solid blocking under center and each end of wall
Drill/notch subfloor to allow nut to sit flush with underside of wall. (Notching of rim joist may also be required)

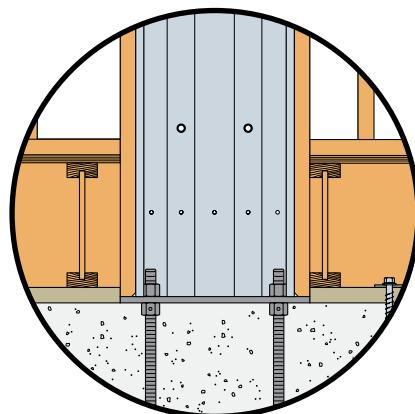

Place Steel Strong-Wall panel over the anchor bolts and secure with heavy hex nuts (provided). Snug tight fit required. Do not use an impact wrench.

- 1 1/4" wrench/socket required for 3/4" nut.
- 1 5/8" wrench/socket required for 1" nut.

CNW Nuts and Threaded Rods (Included with SSW-1KT)

Drill 1 3/4" hole to allow for CNW

SSWAB

ALTERNATE 1ST FLOOR INSTALLATION

Installation for 1st floor wood floor system. Specify taller wall model to allow for floor framing.

Attach to top plates or header with SDS 1/4"x3 1/2" screws (provided)

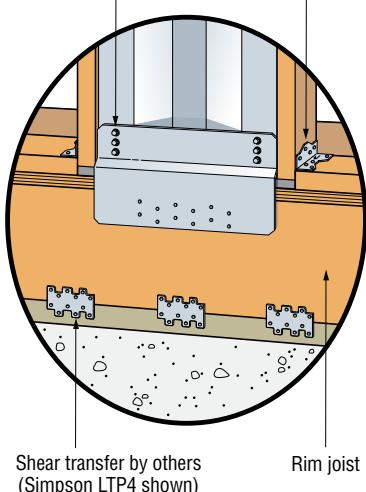

Shim as necessary for tight fit

DO NOT cut wall or enlarge existing holes

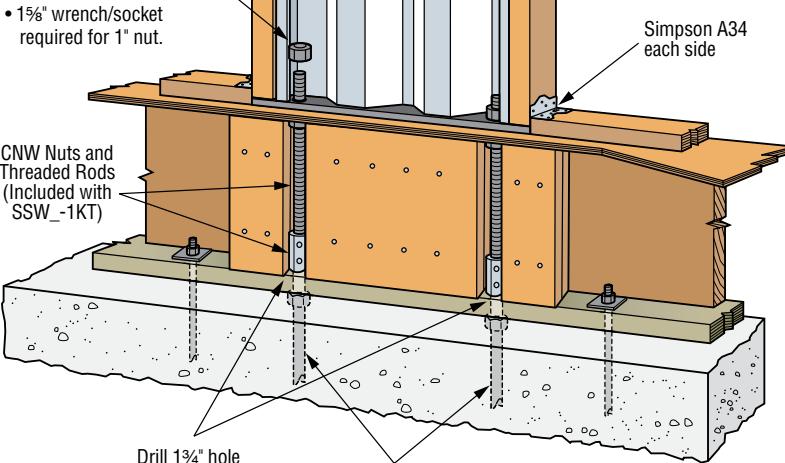

SSW Shear Transfer Plate installs with 10d nails into the rim joist and #14 self-drilling screws into the Strong-Wall (Sold separately with SSW-1KT)

Framing anchor each side by others (Simpson A34 shown)

Rim joist
Shear transfer by others (Simpson LTP4 shown)

EXTERIOR VIEW OF SHEAR TRANSFER PLATE

Foundation Design (size and reinforcement) by others

1. For seismic design using R = 5.5 per 1997 UBC or R = 6.0 for 2000 IBC.

2. May also be used for seismic design using R = 4.4 per 1997 UBC.

3. Loads applicable to designs using the ASD alternate basic load combinations of the 1997 UBC and 2000 IBC.

For designs per the ASD basic load combinations, use the 2003/2006 IBC Load Tables.

4. Minimum ASTM A36 anchor bolts required 1st Story Wood Floor installations.

See pages 38-41 for SSWAB anchor bolt information and anchorage solutions.

5. Loads are applicable to 1st Story Wood Floor installations supported on minimum 2500-psi concrete.

6. Anchor rod tension at design shear load can be determined using the following formula:

$$T = \frac{V \times h}{B} - P/2, \text{ where: } T = \text{Anchor rod tension force (lbs.)}$$

V = Design shear load (lbs.)

h = Strong-Wall height per page 11 (in.)

P = Applied axial load (lbs)

B = Anchor bolt centerline dimension per page 41 (in.)

7. Allowable shear loads assume a maximum first floor joist depth of 12". For allowable shear load with 14"-16" joists, multiply table values by 0.91 for SSW12 models, and 0.93 for all other SSW widths.

8. Loads based on a 1000 lbs. total axial load acting on the entire panel in combination with the shear load.

For shear loads at 2000 lbs. axial load, multiply table values by 0.93 for SSW12 models, and 0.96 for all other SSW widths.

1. For seismic design using R = 6.5.

2. Loads applicable to designs using the ASD basic (Section 1605.3.1) or alternate basic (Section 1605.3.2) load combinations.

3. Minimum ASTM A36 anchor bolts required 1st Story Wood Floor installations.

See pages 38-41 for SSWAB anchor bolt information and anchorage solutions.

4. Loads are applicable to 1st Story Wood Floor installations supported on minimum 2500-psi concrete.

5. Anchor rod tension at design shear load can be determined using the following formula:

$$T = \frac{V \times h}{B} - P/2, \text{ where: } T = \text{Anchor rod tension force (lbs.)}$$

V = Design shear load (lbs.)

h = Strong-Wall height per page 11 (in.)

P = Applied axial load (lbs.)

B = Anchor bolt centerline dimension per page 41 (in.)

6. Allowable shear loads assume a maximum first floor joist depth of 12". For allowable shear load with 14"-16" joists, multiply table values by 0.91 for SSW12 models, and 0.95 for all other SSW widths.

7. Loads based on a 1000 lbs. total axial load acting on the entire panel in combination with the shear load.

For shear loads at 2000 lbs. axial load, multiply table values by 0.92 for SSW12 and SSW15 models, 0.97 for all other SSW widths.
