

Beautiful, Durable,
Renewable Bamboo®

FINE BAMBOO FLOORING, PANELS & VENEER

CREATE with versatile Teragren bamboo

With its quiet coloration and subtle, unusual grain, bamboo is often thought of as a serene element in a spare, contemporary interior or Asian-inspired retreat. Yet the variety of choices in the Teragren flooring line offers many more opportunities to use beautiful bamboo to great effect. Stain colors complement a room layered with rich chenille or tapestries. The striated colors of strand bamboo work as a focal point or complement other patterns in a room. Wide, caramelized planks warm a large area whether it be a family room or an urban loft. For many, an expanse of natural bamboo is an innovative first step in personal expression, one that can also include a custom order you dream up just for your project.

Best of all, you'll live with the peace of mind that your floor is FloorScore®-certified, which means it has been tested for 78 VOCs under the most stringent standards worldwide. Your floor is recognized as contributing to good indoor air quality and your higher quality of life.

Subtle grains infused with nuanced stain colors suit contemporary, traditional and eclectic styles.

Espresso

Walnut

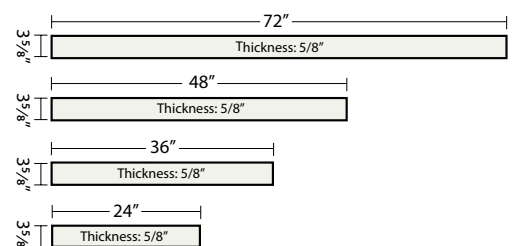

Cherry

Charcoal

Micro-bevel edges and ends.
Each box contains all four lengths.

*Site-finished also available (square edges and ends)

RELAX, it's Teragren bamboo

What's the difference between generic bamboo and Teragren bamboo? We stand behind our products. We give them performance standards and consistent beauty. We do this by manufacturing all of our fine bamboo flooring, panels, and veneer ourselves. That way we can be sure that our products are made with the most durable species of bamboo and environmentally-friendly materials with advanced techniques in ISO-certified factories. We support our claims with independent U.S. testing by companies like SCS, whose FloorScore® certification ensures healthier indoor air quality for your peace of mind. We guarantee our product with a lifetime-structural, 25-year residential/10-year heavy-use commercial finish warranties.

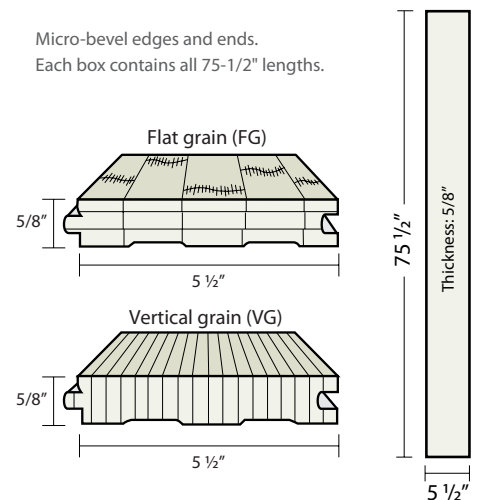

Classically scaled, wider, longer planks anchor grand spaces with traditional flair.

Micro-bevel edges and ends.
Each box contains all 75-1/2" lengths.

The bamboo from your company is fabulous! You really have a fine product. I would prefer it to the hundreds of oak floors that I have been installing.

J. Koruga, West Tier Development

RELY on Teragren

Teragren bamboo flooring is made to last. We use only Optimum 5.5[®] Moso bamboo harvested at maturity when fiber density peaks. That's why Teragren traditional bamboo averages 25 percent harder than red oak. SYNERGY™ strand bamboo flooring with our proprietary Xcora™ technology is actually 154% harder than oak. Teragren floors are protected by a 7-coat German finish with abrasion-resistant aluminum oxide and two polyurethane topcoats. Our finish carries a 25-year residential/10-year heavy-use commercial warranty. Floors may be installed over radiant floor heating systems, too. And caring for your Teragren bamboo floor is easy; simply keep it dirt and grit-free, and clean it with a recommended cleaner—just as any hardwood floor.

SYNERGY™ Strand, with Xcora™ technology, prefinished, solid-strip*, 3-3/4" x 1/2" x 24", 36", 48" and 72"

SYNERGY™ Chestnut

Our SYNERGY™ strand flooring now offers unparalleled durability that is perfect for high-traffic residential and commercial use. Our exclusive Xcora™ technology makes Synergy 154% harder than red oak, and more stable.

I wish I had installed these floors years ago! Best home improvement we have ever done.

L. Hammill, Hesperia, CA

Tools of the trade

Teragren has become a favorite of architects and interior designers because our complete line of fine bamboo products provides so much to work with. Choose from vertical, flat or strand grains; natural, caramelized, stain or strand colors; and narrow, wide or random length planks to complement traditional to contemporary styles. You can even install Teragren bamboo flooring over radiant heat. Visit our website www.teragren.com for details.

If you are one of the growing number of consumers, design professionals and builders seeking ways to incorporate "green" products into your home and projects, you will find Teragren an experienced partner and valuable resource. Since 1994, Teragren has upheld a mission to help reduce dependence on dwindling timber resources by manufacturing competitively priced, sustainably harvested bamboo flooring, panels/veneer, countertops and table tops.

Bamboo is a fast-growing grass. Moso regrows in just six years and can be harvested multiple times. By comparison, hardwood trees take 60 to 80 years to mature and are harvested only once.

SUSTAINABLY HARVESTED OPTIMUM 5.5® MOSO BAMBOO

For all Teragren products, we use only Optimum 5.5 Moso bamboo known for its dense fibers. The bamboo is harvested sustainably at maturity, 5-1/2 to 6 years, for optimal density. These specifications help our products avoid the cupping and warping problems associated with less-expensive, younger bamboo.

CARBON SEQUESTRATION: CLEANER AIR, CARBON OFFSETS

The leafy canopy of bamboo plants helps reduce global warming by releasing 35 percent more oxygen than a comparable hardwood forest. Over a plant's lifespan, rapid regrowth produces multiple canopies that restore oxygen to the air.

Bamboo plants and products made from them remove atmospheric carbon dioxide (CO₂) from the environment at much greater levels than carbon is emitted in shipping products to market. Teragren's recent carbon audit revealed that no more than 25 percent of the CO₂ sequestered in Teragren products is emitted during the transportation of those products to market. The remaining 75 percent of sequestered carbon is permanently locked up within the products themselves.

ENVIRONMENTALLY CONSCIOUS SPECIFICATIONS

Teragren specifications protect the environment around the world and in your home. Our durable, 7-coat factory finish is water based, solvent free and carries a 25-year residential/10-year heavy-use commercial finish warranty. Our proprietary manufacturing adhesive emits less formaldehyde than allowed by U.S. OSHA, European E0, CARB Phase 1 and CARB Phase 2, and Japanese JIS/JAS (F****) standards.

Teragren bamboo flooring products earn LEED®v3 MR credit 6 (Rapidly Renewable Materials) under the U.S. Green Building Council's LEED® Rating System™. They are also FloorScore®-certified, which means they have been tested for 78 VOCs and have passed the most stringent air quality standard in the world, qualifying them to earn LEED v3 credit IEQ 4.3 (Indoor Environmental Quality/Low-Emitting Materials: Flooring Systems). This higher indoor air quality contributes to your peace of mind and a higher quality of life. See our Material + Sustainability Report at www.teragren.com for more information.

POSITIONED TO DO THINGS RIGHT

As a manufacturer, not simply an importer, we control our production process from harvest to distribution. Our factories are ISO 9001- and 14001-certified. We use eleven manufacturing and quality assurance checkpoints and advanced state-of-the-art equipment. Our products are independently tested in the U.S.

MEASURING OUR ENVIRONMENTAL FOOTPRINT

A core component of the Teragren mission is to measure, mitigate and ultimately neutralize our company's environmental footprint. Currently, our Bainbridge Island office is carbon neutral, and measurement is underway at our factories in China and throughout our product transport system.
