Access Products Inc. www.accessproducts.com

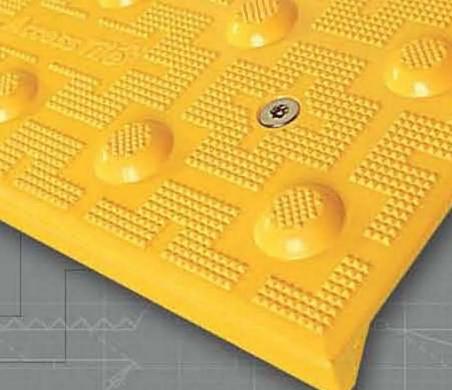

# Introducing the ultimate solution<sup>™</sup> in detectable warning systems.

With 20 years of leading research insights and progressive product development experience,
Access Products Inc. has combined proven polymer processing and material technologies with innovative and intelligent design features to create the ultimate in detectable warning tiles.

Maximized efficiencies in manufacturing, materials sourcing and product specifications deliver the most costeffective solution in the industry.

the power of intelligent design and precision engineering™

# intelligent design™

the genesis of 20 years of innovation

Tamper-proof, counter-sunk, stainless steel fastener sets flush with tile surface and provides for future replaceability.

High density, diamond grip<sup>m</sup> pyramid micro texture designed for exceptional slip resistance in wet and dry conditions.

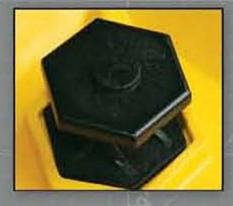

Nylon <u>composite</u>, <u>corrosion</u> resistant anchor and stainless steel fastener <u>provide</u> unlimited re-'installation due to

self-threading design.

Tile geometry allows for consistent dome spacing to be rnaintained between adjoining Cast in Place Replaceable and Surface Applied tiles.

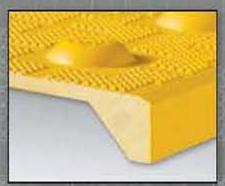

Hexagonal molded forms for permanent interface between tileand anchor system.
Fastener/anchor system comes pre-assembled.

Strategically placed reinforcing internal ribs determined by Finite Element Analysis (FEA) generates enhanced stiffness and structural support.

Pre-formed fastener
locations enable
error-free installation,
Color-matched
Tek™Anchor with stainless steel fastener is supplied with tile.

Reinforced top and bottom flange determined by Finite Element Analysis (FEA) generates enhanced stiffness and structural support.

Perimeter of tile is bevelled to meet ADA requirements for surface height transition.

Open end design eliminates all entrapment during installation to ensure full interface with concrete substructure.

# proven performance

0.39"

# the rigor of unparalleled testing procedures

Accelerated Aging, Freeze: Thaw Chamber

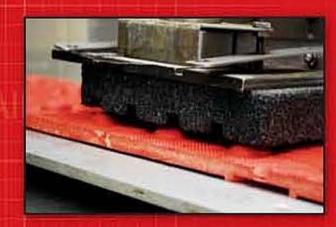

Extreme heat and freezing cycles test structural integrity in all climates while integral toadingreymoders are stille throughout temperature cycles to validate curability.

Tensite Strength: ASTMD 638
Engineering analysis calculates required strengths when exposed to externally applied forces, such as foot-trafficanid moving vehicles.

Taber Abrasilian ASTMCSOI
Weasures the wear resistance of the service
ensure years of maintenance free service

Gardner Abrasion AstMo2486 Additional wear test standard to ensure durability in high foot traffic areas

Slip Resistance ASTM C1028

Measures all presistance to meet

AD A and CHS A standards in both

wet and dry conditions

Compressive Strength AstMoles Measures compressive strength to meet AASHTO standards developed to determine resistance of vehicular loading

Flexural Strength Astmosos
Measures flexural properties of
material required to analyze the
strength necessary to resist repet(ive applied forces

Appredication plaboration as and standards have been used in the development of our state of the last tiles.

ASTM International Underwriters Laboratories Inc., Intertels, O-Lab, Bodycota Testing Scoup.

Access Tile is designed, tested, and manufactured in the **U.S.A**.

# Engineered for Performance. Designed for the Environment.

Our product has en designed and developed with the Earth in mind. The ingenuity of its unique features and the power of its simple installation means tess harms to the environment.

- recyclable and replaceable material
- lighter weight title construction reduces
- uigh efficiency manufacturing operation
- no concrete demolition recessary for replacements again cantly reducing tramful emissions
- highest industry durability extends product life and reduces the number of future replacements

As a member of the U.S. Green Building Council; we take responsibility for developing products that help our customers work towards LEEDS certification.

# YOUR ANSWER TO ACCESSIBILITY STANDARDS

Access Tile is the result of responding to a market demand for a better solution to detectable warning tiles at a cost-effective price. With over 20 years of proven manufacturing experience in detectable warnings, Access Tile's improved design features will exceed industry expectations from specifier to installer.

# ADA, ADAAG, USDOT, FHWA, CALTRANS TITLE 24 COMPLIANT

# intelligent design™ cast in place replaceable

Twenty years of tactile design, testing and manufacturing insights have gone into Access Tile's superior engineered detectable warning product. Access Tile boasts the easiest and fastest installation in the industry requiring no concrete demolition and needing only a single fastening device. The replaceability feature of the tile is industry leading due to its simplicity and speed.

# ADA COMPLIANCE

### www.accesstile.com/ada-compliance

- 2.35" center-to-center, in-line dome spacing meets ADA Federal and State requirements
- Truncated dome size and spacing compliant with ADA Federal and State requirements, 0.9" base and 0.45" top diameter
- Fully complies with all ADA and OHSA requirements for surface height transitions to eliminate trip hazards
- Consistent dome spacing when tiles are adjoined (side-by-side or end-to-end)
- Wide in-line dome configuration facilitates a smooth rolling transition for strollers, wheelchairs and walkers

# ASTM & UL TESTING

### www.accesstile.com/specifications

- Accelerated Aging [freeze thaw] D1037
- Linear Thermal Expansion ASTM D696-03
- Accelerated Weathering ASTM G 155 Tile Bond Strength ASTM C 1583

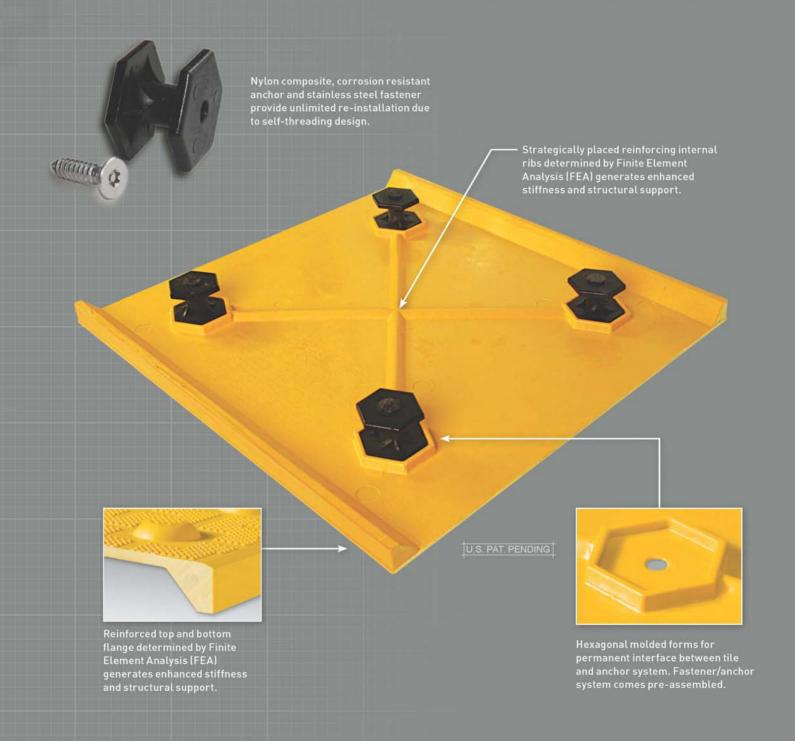

### INTELLIGENT DESIGN FEATURES

- Installs in minutes during concrete finishing stage
- The replaceability feature of the tile is industry leading due to its simplicity and spéed
- Tamper-proof, stainless steel fastener maintains flush interface with walking surface
- Corrosion resistant hexagonal anchors designed to entrap concrete for optimal anchoring
- Anchor and fastener material compositions allow for reliable and secure installations when multiple replacements are necessary
- Large interface between tile and anchor seat area maximizes support at each fastener location
- Multiple fastener locations to ensure full anchoring of tactile surface
- Integral structural spine ensures stiffness and strength
- Tiles shipped with removable protective plastic film to provide a clean surface after installation
- Interactive sizes all tiles maintain pattern repeat when mounted side-to-side or top-to-bottom

# intelligent design™ cast in place replaceable

ADA compliant dome geometry

# easy to install, easy to replace

designed for more environmentally-conscious installation and replacement

www.accesstile.com

888-679-4023

# INSTALLATION

- Maintaining a 4-7 slump range, pour and float the concrete.
- Without removing any concrete, place the tile on the curb ramp 6"-8" from the curb line [face of curb].
- Tamp the tile in grid pattern across the top face, embedding the tile into the concrete using a non-marring rubber mallet.
- Create an 1/4" concrete free edge around the perimeter of the tite using a 3/8" radius edging tool then float the concrete around the tile's perimeter using a steel trowel.
- 5 Apply a broom-finish to the curb ramp.
- After the concrete has substantially cured, remove the protective plastic wrap by cutting the plastic with a sharp knife tight to the concrete/tile interface.

# REPLACEMENT

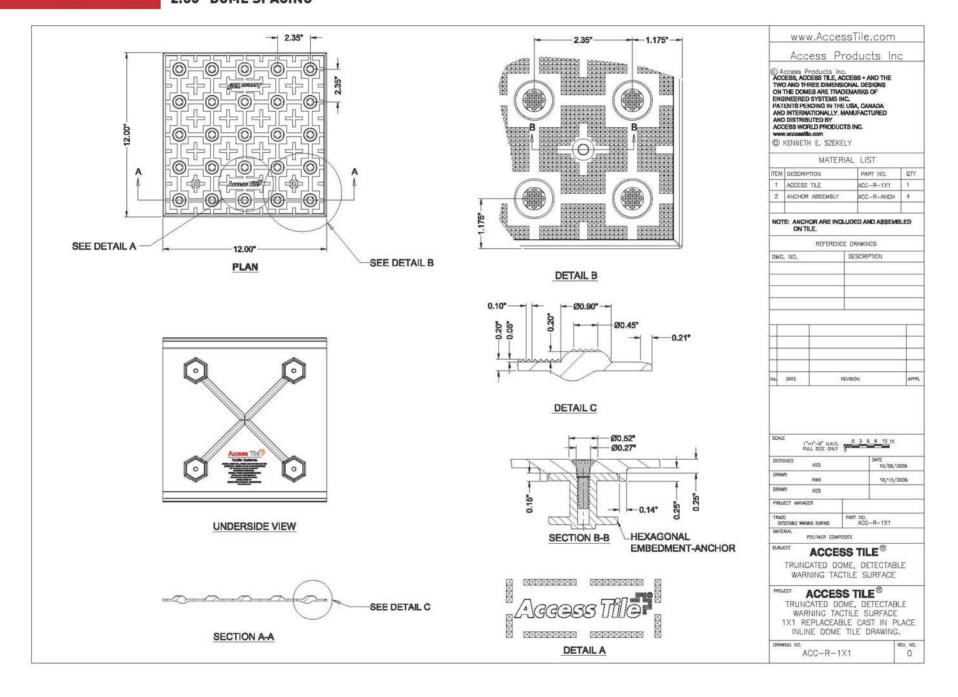

- M Unscrew T27 tamper-proof fasteners.
- Tap perimeter of tile with a rubber mallet to remove bond of tile to concrete.
- Use a pry bar to pry up edge. Remove all debris from vacant cavity mold. Vacuum/ sween all crevices
- pressure to seat tile in recess. Reinsert tamper-proof fasteners in hex shape concrete anchors.

# **Federal**

The Americans with Disabilities Act (ADA) recognizes and protects the civil rights of people with disabilities. To ensure that buildings and facilities are accessible to and usable by people with disabilities, the ADA establishes accessibility requirements. One of those requirements is for the installation of detectable warning surfaces as indicated by the following sections of the ADA Accessibility Guidelines (ADAAG):

R304.1 General. Detectable warnings shall consist of a surface of truncated domes aligned in a square or radial grid pattern and shall comply with R304.

R304.1.1 Dome Size. Truncated domes in a detectable warning surface shall have a base diameter of 23 mm [0.9 in] minimum to 36 mm [1.4 in] maximum, a top diameter of 50 percent of the base diameter minimum to 65 percent of the base diameter maximum, and a height of 5 mm [0.2 in].

R304.1.2 Dome Spacing. Truncated domes in a detectable warning surface shall have a center-to-center spacing of 41 mm [1.6 in] minimum and 61 mm [2.4 in] maximum, and a base-to-base spacing of 17 mm [0.65 in] minimum, measured between the most adjacent domes.

R304.1.3 Contrast. Detectable warning surfaces shall contrast visually with adjacent gutter, street or highway, or walkway surface, either lighton-dark or dark-on-light.

R304.1.4 Size. Detectable warning surfaces shall extend 610 mm (24 in) minimum in the direction of travel and the full width of the curb ramp (exclusive of flares), the landing, or the blended transition.

### R304.2 Location and Alignment

R304.2.1 Perpendicular Curb Ramps. Where both ends of the bottom grade break complying with R303.3.4 are 1.5 m [5.0 ft] or less from the back of curb, the detectable warning shall be located on the ramp surface at the bottom grade break. Where either end of the bottom grade break is more than 1.5 m [5.0 ft] from the back of curb, the detectable warning shall be located on the lower landing.

# KNOWING THE LAW

R304.2.2 Landings and Blended Transitions. The detectable warning shall be located on the landing or blended transition at the back of curb.

R304.2.3 Alignment. The rows of truncated domes in a detectable warning surface shall be aligned to be perpendicular or radial to the grade break between the ramp, landing, or blended transition and the street.

# California (CALTRANS)

Excerpts from the 2001 California Building Code, California Code of Regulations, Title 24, Part 2, Volume 1, California Building Standards Commission

1102A.3-C Detectable warning. Only approved DSA/AC detectable warning products and directional surfaces shall be installed as provided in the California Code of Regulations (CCR), Title 24, Part 1, Articles 2,3, and 4.

1117A.4.7 Detectable warnings. A curb ramp shall have a detectable warning that extends the full width and depth of the curb ramp when the ramp slope is less than 1 unit vertical in 15 units horizontal (6.7% slope).

1133B.8.3 Detectable warnings at transit boarding platforms. Transit boarding platforms shall have a detectable warning texture extending the full length of the loading area.

113B.8.4 Detectable directional texture at boarding platforms. At transit boarding platforms, the pedestrian access shall be identified with a detectable directional texture.

# UNDERSTANDING COMPLIANCE

# R304.1.4 Curb Ramp and Size of Detectable Warning Area

- Full width of ramp excluding flares
- 24" minimum in the direction of trave

R304.2.1 Perpendicular Curb Ramps

s and a

# R305.4 Media Pedestrian R Shall have that compand bland

### R305.4 Medians and Pedestrian Refuge Islands

- Shall have detectable warnings that comply with R304 at ramps and blended transitions
- At cut through islands at curb line in-line with face of curb and shall be separated by a 2 foot minimum length of walkway without detectable warnings

### R304.2.2 Landings and Blended Transitions

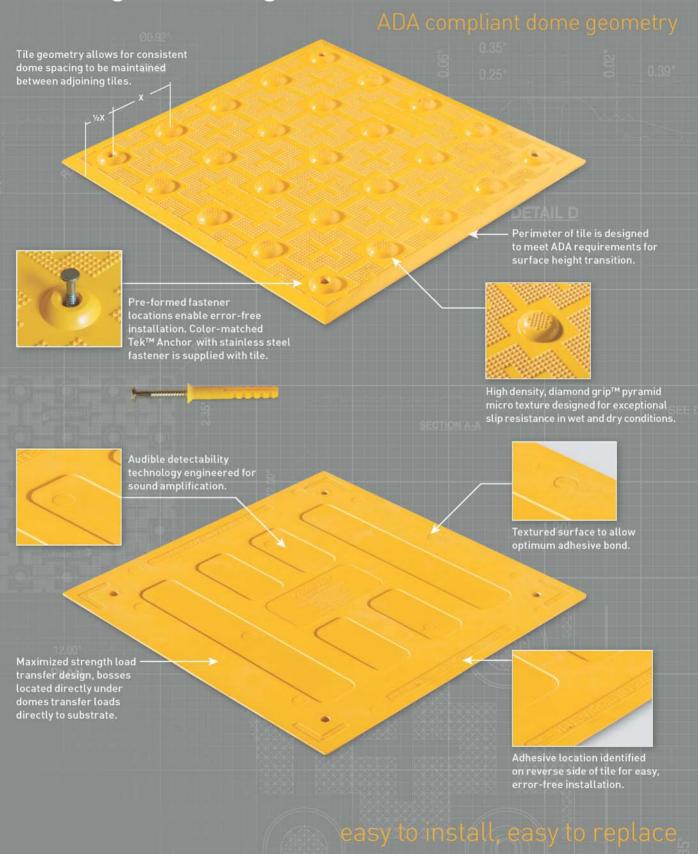

- Located on landing or blended transition at back of curb
- 36" in the direction of travel

### R304.2.3 Rail Crossing

- Edge nearest rail crossing is 6 feet minimum and 15 feet maximum from center line of the nearest rail
- Truncated domes shall be aligned to be parallel with the direction of wheelchair travel

# intelligent design™ surface applied

installation and replacement

Access Tile

# INSTALLATION

- Place the tile on the designated location and trace the perimeter with a thin permanent marker.
- 2 Set the tile aside and using a 4" diamond cup grinder, scour the concrete within the marked location and in correspondence with the location requiring adhesive as indicated in backside of tile.
- 3 Clear away the dust with a leaf blower then clean the back of the tile and the concrete with rag soaked in acetone.
- Apply adhesive to back of tile (as indicated on tile). The first bead should be applied thin, ½" from the perimeter edge and a second thicker bead applied 1" inside of the first.
- s Set the tile true and square to the curb ramp and press down firmly.
- 6 While stepping down on either side of preformed hole, drill down 3" into concrete slab using a hammer drill and the recommended 1/4" diameter carbide drill bit.
- 7 While still applying pressure, remove the dust and any adhesive that surfaces and carefully set the supplied color-matched Tek™ Anchor with a plastic-tipped hammer. Repeat steps 6 & 7 while working across the tile from one end until all pre-formed fastener locations are completed.
- © Clean the perimeter of the tile and the immediately surrounding concrete with acetone making sure to remove any adhesive that has escaped from beneath the tile. Apply and smooth sealant around perimeter of tile.
