

KlassikDrain

General Purpose Trench Drains

KlassikDrain is the market's most widely used modular trench drain system. Developed to offer edge protection to the channels and provide a discreet look that highlights the grate style only. KlassikDrain offers a wide range of grates in many styles, materials, finishes and load categories to provide the ultimate plug and play trench drain system.

Features & Benefits

Wide Choice of Grates

In various materials and styles (including ADA compliant) for applications from Load Class A to Load Class E. See page 13.

DrainLok & QuickLok®

Patented, boltless locking systems provide quick fitting and removal of grates. Helps reduce installation/maintenance time and cost.

Integral Steel Edge Rail

Provides additional strength and protects channel body from damage. Stainless steel edge rail also available.

Polymer Concrete

A durable, yet lightweight material made from polyester (a resin binder) reinforced by mineral aggregates and fillers. It provides up to four times the compressive strength of cement concrete.

See page 170 for material properties.

Interconnecting End Profiles

Allow easy and effective joining of channels. Appropriate sealant can be used to create a sealed joint.

K300 12" INTERNAL WIDTH

Knockouts

Included on every 5th channel to allow vertical evacuation of the system along the run. See product pages for sizes for each system.

K200 8" INTERNAL WIDTH

Brickslot 100 & 200

A discreet drainage solution for use with brick or stone pavers. Available as standard, Heel-resistant and Twinslot versions. See pages 39 and 57.

Anti-Shunt Lugs

Protrusions in grate fit into recesses on the edge rail to prevent longitudinal movement.

Profiled Side Walls

Strengthening pillars and frost keys provide channel body strength and mechanical keying to surrounding concrete.

Channel Identification

Channels feature numbering on sidewalls and base of channel (to allow easy identification after concrete encasement).

Shipping Gipple/Groove

Side interlocking feature ensures safer stacking of channels on pallets for shipping and minimizes breakage.

K100 4" INTERNAL WIDTH

K50 2" INTERNAL WIDTH

Directional Arrows

Cast on side of channel indicate flow direction and ensure channels are installed correctly.

Sloped (0.5%) Channel Units

Meter long units provide 131'-3" continuous slope - equates to 1/17" fall per linear foot. Constant depth units can be used to extend run lengths.

System Numbering

Each end of the channel indicates the number of the channel that will connect to it.

KlassikDrain K100/KS100

4" Internal Width General Purpose System

K100 is a 4" internal width, general purpose system with galvanized steel edge rail and the widest choice of grates in different materials and slot styles up to Load Class E (134,885 lbs) featuring either patented DrainLok or QuickLok® boltless locking systems.

KS100 is the same system, but the edge rail is grade 304 stainless steel. KS100 should be used where increased aesthetics are required or where increased corrosion resistance is required.

Typical Applications:

- Parking lots & garages
- Shopping malls
- Pedestrian areas
- Light industrial areas
- Commercial areas
- Internal applications

KLASSIKDRAIN K100/KS100 SELECTION CRITERIA

Light to industrial duty loads

Product can be used towards LEED & EPA requirements

Resistant to many everyday chemicals

Multiple grate options to meet legal requirements

Multiple grate options to meet design requirements

General, everyday hydraulic capacity

Constant depth and/or sloped depth channels

K100/KS100 System Layout

K1 Meter Channels - Sloping & Constant Depth

0.5% sloped channels in meter lengths and 40 depths which connect to create 40 meter (131'-2") continuously sloping run. Available with either galvanized or stainless steel edge rail.

Constant depth channels available in 5 depths. Can be used to create non-sloped runs, or inserted in sloped runs to increase length.

Bottom knockouts on all constant depths and 5, 10, 15, 20, 25, 30, 35, 40 channels.

K1 Half-Meter Channels

Constant depth channels in 4 depths supplement meter channels. Side knockout and profiling enable side junction to be created. Bottom knockouts on all half meter channels. Available with either galvanized or stainless steel edge rail.

K1 6" SCH 40 Inlet/Outlet End Cap

6" SCH 40 plain end plastic pipe; oval to round adapter cast into polymer concrete end cap and available in two heights. Solvent weld to coupler.

Note: These end caps cannot be cut to height, and fit only at positions shown in layout diagram.

Outlet Adapter - 4" Oval to 6" Round

Oval to round plastic adapter for bottom drill-out on 4" polymer concrete channels. SCH 40 6" plain end can be solvent welded to underground pipe system. Seal to channel using appropriate flexible sealant.

K1 Universal Inlet/Outlet/End Cap

Fits all channels and manufactured from ABS plastic to complement edge rail. Guides aid cutting to correct height. Wings clip cap onto end of channel. 4" bell end connection to SCH 40 pipe. Seal using PVC-ABS cement.

Note: ACO recommends removal of unused sections of bell end to ensure adequate pavement material coverage.

K1 Installation Device

Fits molded recesses on body of channel. Provides height and joint alignment - a sliding clamp locks the two channels together. Bolt to rebar on either side of channel to hold channels in place during concrete pour. Not reusable; it is encased within concrete pour.

K1 Series 900 In-Line Catch Basins

Two-part in-line catch basin with either a plastic base with 4", 6" and 8" drill-outs for pipe connection or a polymer concrete base. Supplied with plastic trash bucket. Options include an in-line or side foul air trap. Available with either galvanized or stainless steel edge rail.

Any channel can be connected into the catch basin by removing the end wall to the correct height with a box cutter. Cut-out guides provided for connection to channels 00, 010, 020, 030 and 040. All cut-outs to receive male channel ends. One blanking end plate supplied with each in-line catch basin.

K1 Series 600 Catch Basins

Two-part catch basin; bases have either a plastic base with 4", 6" and 8" drill-outs for pipe connection or a polymer concrete base. Supplied with plastic trash bucket. Optional riser available for increased depth. Available with either galvanized or stainless steel edge rail.

Any channel can be connected to catch basin by removing end/side wall to correct height. Drill-outs guide connection to channels 00, 010, 020, 030 and 040. All cut-outs to receive male channel ends.

Notes:

1. K100 has a galvanized steel edge rail for general use. KS100 has a grade 304 stainless steel edge rail for use where increased aesthetics or corrosion resistance is required.

2. KlassikDrain is sold as channel only. Choose appropriate grate from pages 35–38.

3. Debris strainer details for 4" dia. outlet on page 138.

4. See Catch Basin Parts List on page 29.

*This channel features 4" & 6" bottom knockouts.

Catch Basin Assemblies & Part Details

Polymer concrete catch basins can be used as standalone area drains or as the outlet to a trench run. They provide the highest hydraulic output and allow access to the pipe system for maintenance.

Series 900 catch basins are **in-line catch basins** (same width and visually indistinguishable from the trench run) while Series 600 catch basins are 12" wide, providing greater hydraulic output.

CATCH BASIN LOAD STRENGTH

Catch basins with plastic risers/bases should be used in load classes A–D. For heavy duty applications, ACO recommends using polymer concrete risers and catch basins for load class E/F applications.

K100/KS100 Catch Basin Parts

	Part No.		Volume*	Weight
	K100	KS100		
K1-901 In-Line Catch Basin w/ Plastic Base	94608	94609	12.3	52.6
K1-906 In-Line Catch Basin w/ Polymer Concrete Base	97934	97935	11.1	113.4
K1-621 Catch Basin w/ Plastic Base	94617	94618	24.9	55.8
K1-622 Catch Basin w/ Polymer Concrete Base	97915	97916	25.1	137.5
K1-631 Catch Basin w/ Plastic Riser & Base	94631	94632	34.7	65.8
K1-632 Catch Basin w/ Polymer Concrete Riser & Base	97925	97926	34.0	183.0
Series 600 Plastic Riser	99902		9.8	10.0
Series 611 Polymer Concrete Riser	91110		8.9	45.0
Foul Air Trap (fits all plastic basins)	90854		-	1.2

*Volume is up to grate seat and without trash bucket.

BLANKING END PLATES

Blanking plates are supplied with catch basin tops to stop concrete ingress at end of drain run. The plate is fitted by pushing it over the polymer concrete end bar to fit flush with side rails.

FOUL AIR TRAP

A plastic foul air trap that fits into the front or side of plastic in-line catch basins. A coupler is required to connect SCH 40 4" plain end pipe to underground pipe system.

CATCH BASIN CHANNEL CONNECTION

Channels can be connected to catch basin on all four sides in a variety of configurations.

Series 900

Series 600

K1 SERIES 900 4" WIDE IN-LINE CATCH BASINS

K1 SERIES 600 12" WIDE CATCH BASINS

Series 600 Grates - choice of grates to match/complement channel with DrainLok or QuickLok® boltless locking. See page 77–78. All catch basin assemblies will include one QuickLok® Locking Bar.

Series 900 Grates - choice of grates to match channel grates with DrainLok or QuickLok® boltless locking. See page 35–38. QuickLok® grates are often paired with removable QuickLok® locking bars for easy access to trash bucket and pipework. One is included in each catch basin assembly.

Top Section - polymer concrete with integrally cast-in galvanized or stainless steel frame. Guides aid connection of male channel ends at #10, 20, 30 and 40 depths. Other channels can be connected by removing wall to required height. Blanking kit supplied with in-line catch basins.

Trash Bucket - plastic trash bucket designed to collect debris washed from trench run. Supported in catch basin top to avoid creation of a vacuum and reduction in outflow. K1-631 and K1-632 use a deeper bucket with riser.

Riser - a plastic or polymer concrete riser supplied with K1-631 and K1-632, designed to provide additional catch basin depth and hydraulic output. Guides on the plastic version enable cutting to size at 2" (50 mm) intervals - minimum 2" and maximum 12" height. Additional units can be used (a maximum of 2 is recommended to ensure snake access is maintained and for structural stability).

Multiple risers can be used with series 600 catch basins.

Base - Plastic or polymer concrete bases available. Plastic bases have a wide range of SCH 40 4", 6" and 8" cut-outs for easy pipe connection. Cut-outs on end and side allow connection of ACO foul air trap. Polymer concrete bases have drill-outs cast on the sides for pipe connections.

Catch Basin Dimensions & Outlet Flow Rates

K1-901G/S In-Line Catch Basin

MADAME TUSSAUDS

Hollywood, CA
United States

Madame Tussauds Hollywood is a wax museum and tourist attraction located on Hollywood Boulevard in Hollywood, California. It is the ninth location for the Tussauds franchise, which was set up by sculptor Marie Tussaud. KlassikDrain KS100 and Type 447 stainless steel longitudinal grates were used to stop stormwater from running into both Madame Tussauds and onto the Walk of Fame where over 10 million tourists visit each year.

PORTFOLIO

K100/KS100 Grates - DrainLok

KEY

ADA Compliant

Compliant with Americans with Disabilities Act of 2010, Section 302.3 (page 174)

Heel-Resistant

ASME A12.6.3 - 2001 Heel-resistant slot width less than 0.31" (8 mm) (page 174)

Heel-Safe

Heel-safe slot width equal or less than 0.25" (6.5 mm) (page 174)

Slip-Resistant Grates

BPN over 24 (page 174)

Bicycle-Safe

Compliant to Australian Standard AS 3996 - 2006 (page 174)

Non-Metallic

No metallic/magnetic parts included (page 170)

For details on how psi is determined, see pages 161-166.

DRAINLOK - BOLTLESS & BARLESS LOCKING SYSTEM

Factory-fitted locking device removes need for bolts and bars and improves channel hydraulic capacity. The DrainLok mechanism clips into channel edge rail for rapid installation. DrainLok grates are fit with an anti-shunt mechanism that restricts unwanted grate movement when installed, improving durability and longevity of the system.

Fit grate

Position grate onto channel and align anti-shunt detail with recess in rail.

Push down or stand on grate until it clicks into position.

Grate removal

To remove first grate, insert grate removal tool into slots at end of grate, pull up sharply. Remaining grates can be removed by hand.

K100/KS100 Grates - QuickLok®

KEY

ADA Compliant

Compliant with Americans with Disabilities Act of 2010, Section 302.3 (page 174)

Heel-Resistant

QUICKLOK® - BOLTLESS LOCKING SYSTEM

1

Fit locking bar

Locate locking bar in channel wall recesses by rotating clockwise.

2

Use hammer to tap bar into place, so that serrated ends grip in recess.

3

To install grate, align QuickLok® stud directly over locking bar.

4

Push down or stand on grate until it clicks into position.

5

To remove first grate, insert grate removal tool into hole at end of grate, pull up sharply. Remaining grates can be removed by hand.

6

Remove grate

To remove bar, insert screwdriver into hole at end of bar and lever back serrated end, rotate bar free.

Brickslot 100

Discreet Slot & 4" Internal Width Drainage Channel

Brickslot is a discreet, galvanized steel drainage solution for use with 3.125" or less brick or stone pavers. The slots blend in with the paving joints giving an aesthetic solution.

Brickslot 100 offers a single offset slot, or a twin heel-resistant slot option.

Stainless steel Brickslot is the same system, but is manufactured entirely in grade 304 stainless steel. Stainless steel Brickslot should be used where increased aesthetics are desired, or where increased corrosion resistance is required.

Typical Applications:

- Pedestrian plazas
- Aesthetic areas
- Paved areas
- Sidewalks

BRICKSLOT 100 SELECTION CRITERIA

	Light to medium duty loads
	Product can be used towards LEED & EPA requirements
	Resistant to many everyday chemicals
	Multiple grate options to meet legal requirements
	General, everyday hydraulic capacity
	Constant depth and/or sloped depth channels

Brickslot 100 Features

Brick Pavers

Fit directly against slot. For light duty pedestrian applications, pavers can be set on sand; for heavier duty projects, pavers should be set on concrete. Maximum paver depth (allowing for 0.25" (6 mm) bedding material): 3.125" (80 mm).

0.5" (12 mm) Slot

Easy-to-clean, smooth slots allow continuous water flow into the channel. Offset, heel-resistant, double 0.31" (8 mm) flared slot opening to 1" (25 mm) throat for increased drainage capacity.

End Caps and Accessories

Available from the K100 range.
See page 28 for details.

Used with K100 Channel

Brickslot fits directly into K100 channel grate recess. Half meter sections are available. Half meter access units provide access to channel or catch basin for maintenance.
See page 28 for details.

Notes

1. For K100 channels and K1-900 catch basin information [pages 28-29](#).
2. Brickslot can also be used with SlabDrain HK channels - [see page 135](#).
3. Access unit can be used on channels or catch basins - for details please refer to separate Spec Info sheets.
4. Only access cover can be removed once Brickslot has been installed.
5. For custom slot widths, heights or materials (e.g. 316L stainless steel), ask us about our Aquaduct product line.

KlassikDrain K200/KS200

8" Internal Width General Purpose System

K200 is an 8" wide system with galvanized steel edge rail and wide choice of grates in different materials and slot styles up to Load Class E (60 ton) featuring either patented DrainLok or QuickLok® boltless locking systems.

KS200 is the same system, but the edge rail is grade 304 stainless steel. KS200 should be used where increased aesthetics are required, or where increased corrosion resistance is required.

Typical Applications:

- Parking lots & garages
- Shopping malls
- Pedestrian areas
- Light industrial areas
- Commercial areas
- Internal applications

KLASSIKDRAIN K200/KS200 SELECTION CRITERIA

	Light to industrial duty loads
	Product can be used towards LEED & EPA requirements
	Resistant to many everyday chemicals
	Multiple grate options to meet legal requirements
	Multiple grate options to meet design requirements
	Increased hydraulic capacity
	Constant depth and/or sloped depth channels

K200/KS200 System Layout

K2 Meter Channels - Sloping & Constant Depth

0.5% sloped channels in meter lengths and 40 depths which connect to create 40 meter (131'-2") continuously sloping run. Available with either galvanized or stainless steel edge rail.

Constant depth channels available in 5 depths. Can be used to create non-sloped runs, or inserted in sloped runs to increase length.

Bottom knockouts on all constant depths and 5, 10, 15, 20, 25, 30, 35, 40 channels.

K2 Half-meter Channels

Constant depth channels in 4 depths supplement meter channels. Side knockout and profiling enable side junction to be created. Bottom knockouts on all half meter channels. Available with either galvanized or stainless steel edge rail.

K2 Universal Inlet/Outlet/End Cap

Fits all channels and manufactured from ABS plastic to complement edge rail. Guides aid cutting to correct height. Wings clip cap onto end of channel. 4" and 6" bell end connection to SCH 40 pipe. Seal using PVC-ABS cement.

Note: ACO recommends removal of unused sections of bell end to ensure adequate pavement material coverage.

K2 Installation Device

Fits molded recesses on body of channel. Provides height and joint alignment - a sliding clamp locks the two channels together. Bolt to rebar on either side of channel to hold channels in place during concrete pour. Not reusable; it is encased within concrete pour.

K2 Series 900 In-Line Catch Basins

Two-part in-line catch basin with either a plastic base with 4", 6" and 8" drill-outs for pipe connection or a polymer concrete base. Supplied with plastic trash bucket. Options include an in-line or side foul air trap. Available with either galvanized or stainless steel edge rail.

Any channel can be connected into the catch basin by removing the end wall to the correct height with a box cutter. Cut-out guides provided for connection to channels 00, 010, 020, 030 and 040. All cut-outs to receive male channel ends. One blanking end plate supplied with in-line catch basin.

K2 Series 600 Catch Basins

Two-part in-line catch basin with either a plastic base with 4", 6" and 8" drill-outs for pipe connection or a polymer concrete base. Supplied with plastic trash bucket. Available with either galvanized or stainless steel edge rail.

Any channel can be connected to catch basin by removing end/side wall to correct height. Drill-outs guide connection to channels 00, 010, 020, 030 and 040. All cut-outs to receive male channel ends. Blanking kits included to stop concrete ingress during final pour.

Notes:

1. K200 has a galvanized steel edge rail for general use. KS200 has a grade 304 stainless steel edge rail for use where increased aesthetics or corrosion resistance is required.
 2. KlassikDrain is sold as channel only. Choose appropriate grate from pages 55-56.
 3. Debris strainer details for 4" dia. outlet on page 138.
 4. See Catch Basin Parts List on page 49.
- *This channel features 4" & 6" bottom knockouts.

Catch Basin Assemblies & Part Details

Polymer concrete catch basins can be used as standalone area drains or as the outlet to a trench run. They provide the highest hydraulic output and allow access to the pipe system for maintenance.

Series 900 catch basins are **in-line catch basins** (same width and visually indistinguishable from the trench run) while Series 600 catch basins are 12" wide, providing greater hydraulic output.

CATCH BASIN LOAD STRENGTH

Catch basins with plastic risers/bases should be used in load classes A–D. For heavy duty applications, ACO recommends using polymer concrete risers and catch basins for load class E/F applications.

K200/KS200 Catch Basin Parts

	Part No.		Volume*	Weight
	K200	KS200	gal	lbs
K2-902 In-Line Catch Basin w/ Plastic Base	94611	94612	18.1	68.0
K2-906 In-Line Catch Basin w/ Polymer Concrete Base	97937	97938	17.5	137.1
K2-621 Catch Basin w/ Plastic Base	94620	94621	24.9	91.0
K2-622 Catch Basin w/ Polymer Concrete Base	97917	97918	25.1	169.7

K2-632 Catch Basin w/ Polymer Concrete Riser & Base	97927	97928	34.0	215.2
Series 600 Plastic Riser	99902		9.8	10.0
Series 611 Polymer Concrete Riser	91110		8.9	45.0
Foul Air Trap (fits all plastic basins)	90854		-	1.2

*Volume is up to grate seat and without trash bucket.

BLANKING END PLATES

Blanking plates are supplied with catch basin tops to stop concrete ingress at end of drain run. The plate is fitted by pushing it over the polymer concrete end bar to fit flush with side rails.

FOUL AIR TRAP

A plastic foul air trap that fits into the front or side of plastic in-line catch basins. A coupler is required to connect SCH 40 4" plain end pipe to underground pipe system.

CATCH BASIN CHANNEL CONNECTION

Channels can be connected to catch basin on all four sides in a variety of configurations.

Series 900

Series 600

K2 SERIES 900 8" WIDE IN-LINE CATCH BASINS

K2 SERIES 600 12" WIDE CATCH BASINS

Series 600 Grates - choice of grates to match/complement channel with DrainLok or QuickLok® boltless locking. See page 77–78. All catch basin assemblies will include one QuickLok® Locking Bar.

Series 900 Grates - choice of grates to match channel grates with DrainLok or QuickLok® boltless locking. See page 55–56. QuickLok® grates are often paired with removable QuickLok® locking bars for easy access to trash bucket and pipework. One is included in each catch basin assembly.

Top Section - polymer concrete with integrally cast-in galvanized or stainless steel frame. Guides aid connection of male channel ends at #10, 20, 30 and 40 depths. Other channels can be connected by removing wall to required height. Blanking kit supplied with all catch basins.

Trash Bucket - plastic trash bucket designed to collect debris washed from trench run. Supported in catch basin top to avoid creation of a vacuum and reduction in outflow. K2-631 and K2-632 use a deeper bucket with riser.

Riser - a plastic or polymer concrete riser, supplied with K2-631 and K2-632, designed to provide additional catch basin depth and hydraulic output. Guides on the plastic version enable cutting to size at 2" (50 mm) intervals - minimum 2" and maximum 12" height. Additional units can be used (a maximum of 2 is recommended to ensure snake access is maintained and for structural stability).

Multiple risers can be used with series 600 catch basins.

Base - Plastic or polymer concrete base available. Plastic bases have a wide range of SCH 40 4", 6" and 8" cut-outs for easy pipe connection. Cut outs on end and side allow connection of ACO foul air trap. Polymer concrete bases have drill-outs cast on sides for pipe connections.

UNIVERSITY OF TENNESSEE

Chattanooga, TN
United States

In order to extend the accessible walkway through the heart of the UTC campus, from Heritage Plaza to Oak Street, through the area nicknamed "Cardiac Hill," a series of sloped sidewalks and steps with handrails were required.

A series of trench drain runs were required at the base of each run of steps to prevent heavy rains spilling across the sloped ramps.

K200 provided increased hydraulic capacity with the ADA compliant, pedestrian friendly grate that was also architecturally pleasing, to ensure the projects aesthetic requirements were met.

PORTFOLIO

K200/KS200 Grates - DrainLok

KEY

ADA Compliant

Compliant with Americans with Disabilities Act of 2010, Section 302.3 (page 174)

Slip-Resistant Grates

BPN over 24 (page 174)

Heel-Resistant

ASME A12.6.3 - 2001 Heel-resistant slot width less than 0.31" (8 mm) (page 174)

Bicycle-Safe

Compliant to Australian Standard AS 3996 - 2006 (page 174)

Heel-Safe

Heel-safe slot width equal or less than 0.25" (6.5 mm) (page 174)

Non-Metallic

No metallic/magnetic parts included (page 170)

For details on how psi is determined, see pages 161-166.

DRAINLOK - BOLTLESS & BARLESS LOCKING SYSTEM

Factory-fitted locking device removes need for bolts and bars and improves channel hydraulic capacity. The DrainLok mechanism clips into channel edge rail for rapid installation. DrainLok grates are fit with an anti-shunt mechanism that restricts unwanted grate movement when installed, improving durability and longevity of the system.

Fit grate

Position grate onto channel and align anti-shunt detail with recess in rail.

Push down or stand on grate until it clicks into position.

Remove grate

To remove first grate, insert grate removal tool into slots at end of grate, pull up sharply. Remaining grates can be removed by hand.

QUICKLOK® - BOLTLESS LOCKING SYSTEM

1	2	3	4	5	6
Fit locking bar		Fit grate		Remove grate	
Locate locking bar in channel wall recesses by rotating clockwise.	Use hammer to tap bar into place, so that serrated ends grip in recess.	To install grate, align QuickLok® stud directly over locking bar.	Push down or stand on grate until it clicks into position.	To remove first grate, insert grate removal tool into slots at end of grate, pull up sharply. Remaining grates can be removed by hand.	To remove bar, remove clips then insert screwdriver into hole at end of bar and lever back serrated end, rotate bar free.

Brickslot 200

Discreet Slot & 8" Internal Width Drainage Channel

Brickslot is a discreet, galvanized steel drainage solution for use with 3.125" or less brick or stone pavers. The slot(s) blend in with the paving joints giving an aesthetic solution.

Brickslot 200 offers increased capacity via a double spaced Twinslot, or a central twin Heel-resistant slot.

Stainless steel Brickslot is the same system, but is manufactured entirely in grade 304 stainless steel. Stainless steel Brickslot should be used where increased aesthetics are desired, or where increased corrosion resistance is required.

Typical Applications:

- Pedestrian plazas
- Aesthetic areas
- Paved areas
- Sidewalks

BRICKSLOT 200 SELECTION CRITERIA

	Light to industrial duty loads
	Product can be used towards LEED & EPA requirements
	Resistant to many everyday chemicals
	Multiple grate options to meet legal requirements
	Increased hydraulic capacity
	Constant depth and/or sloped depth channels

Brickslot 200 Features

Two 6" Parallel 0.5" (12 mm) Slots

Easy-to-clean, smooth slots allow continuous water flow into the channel.

Brick Pavers

Fit directly against slot. For light duty pedestrian applications, pavers can be set on sand; for heavier duty projects, pavers should be set on concrete. Maximum paver depth (allowing for 0.25" (6 mm) bedding material): 3.125" (80 mm).

End Caps and Accessories

Available from the K200 range.
See page 48 for details.

Used with K200 Channel

Brickslot fits directly into K200 channel grate recess. Half meter sections are available. Half meter access units provide access to channel or catch basin for maintenance. See page 48 for details.

Heel-Resistant Option

Heel-Resistant Brickslot offers a double, 0.375" (8 mm) flared-opening slot to a 0.875" (22 mm) throat for increased drainage capacity.

Notes

1. For K200 channels and K2-900 catch basin information [see page 48-49](#).
2. Brickslot can also be used with SlabDrain H200K/S channels - [see page 135](#).
3. Access unit can be used on channels or catch basins - for details please refer to separate Spec Info sheets.
4. Only access cover can be removed once Brickslot has been installed.
5. For custom slot widths, heights or materials (eg. 316L stainless steel), ask us about our Aquaduct product line.

Heel-Resistant Brickslot 200 Access Unit

EcoPanel

Permeable Paver Cover & 8" Internal Width Drainage Channel

EcoPanel is a stormwater trench drain cover constructed from permeable UV stable resin-bonded aggregate in a galvanized steel frame. The unique combination of a durable load bearing surface enclosed in an engineered frame allows for water infiltration under medium duty traffic.

EcoPanel linear permeable paver covers are installed into ACO's KlassikDrain K200 or SlabDrain H200 (8" internal width) channels.

EcoPanel is a unique and decorative drainage solution that can be used as a design element to create distinctive urban landscapes.

Typical Applications:

- Shopping Centers/Malls
- Pedestrian Plazas
- Bicycle Paths
- Playgrounds
- Parking Lots
- Parks

ECOPANEL SELECTION CRITERIA

		Pedestrian to light duty loads	
		Product can be used towards LEED & EPA requirements	
		Resistant to many everyday chemicals	
			Multiple grate options to meet legal requirements
			Multiple grate options to meet design requirements
			Increased hydraulic capacity
			Constant depth and/or sloped depth channels

EcoPanel Connection Options

KlassikDrain K300/KS300

12" Internal Width General Purpose System

K300 is a 12" wide system with galvanized steel edge rail and wide choice of grates in different materials and slot styles up to Load Class E (60 ton) featuring either patented DrainLok or QuickLok® boltless locking systems.

KS300 is the same system, but the edge rail is grade 304 stainless steel. KS300 should be used where increased aesthetics are required, or where increased corrosion resistance is required.

Typical Applications:

- Parking lots & garages
- Shopping malls
- Pedestrian areas
- Light industrial areas
- Commercial areas
- Internal applications

KLASSIKDRAIN K300/KS300 SELECTION CRITERIA

Light to industrial duty loads

Product can be used towards LEED & EPA requirements

Resistant to many everyday chemicals

Multiple grate options to meet legal requirements

Multiple grate options to meet design requirements

Maximum hydraulic capacity

Constant depth and/or sloped depth channels

K300/KS300 System Layout

K3 Meter Channels - Sloping & Constant Depth

0.5% sloped channels in meter lengths and 40 depths which connect to create 40 meter (131'-2") continuously sloping run. Available with either galvanized or stainless steel edge rail.

Constant depth channels available in 5 depths. Can be used to create non-sloped runs, or inserted in sloped runs to increase length.

Bottom knockouts on all constant depths and 5, 10, 15, 20, 25, 30, 35, 40 channels.

K3 Half-Meter Channels

Constant depth channels in 4 depths supplement meter channels. Side knockout and profiling enable side junction to be created. Bottom knockouts on all half meter channels. Available with either galvanized or stainless steel edge rail.

K3 Universal Inlet/Outlet/End Cap

Fits all channels and manufactured from ABS plastic to complement edge rail. Guides aid cutting to correct height. Wings clip cap onto end of channel. 6", 8" and 10" bell end connection to SCH 40 pipe. Seal using PVC-ABS cement.

K3 Installation Device

Fits molded recesses on body of channel. Provides height and joint alignment - a sliding clamp locks the two channels together. Bolt to rebar on either side of channel to hold channels in place during concrete pour. Not reusable; it is encased within concrete pour.

K3 Series 900 In-Line Catch Basins

Two-part in-line catch basin with either a plastic base with 4", 6" and 8" drill-outs for pipe connection or a polymer concrete base. Supplied with plastic trash bucket. Options include an in-line or side foul air trap. Available with either galvanized or stainless steel edge rail.

Any channel can be connected into the catch basin by removing the end wall to the correct height with a box cutter. Cut-out guides provided for connection to channels 00, 010, 020, 030 and 040. All cut-outs to receive male channel ends. One blanking end plate supplied with in-line catch basin.

Notes:

1. K300 has a galvanized steel edge rail for general use. KS300 has a grade 304 stainless steel edge rail for use where increased aesthetics or corrosion resistance is required.
2. KlassikDrain is sold as channel only. Choose appropriate grate from pages 77-78.
3. See Catch Basin Parts List on page 71.

*This channel features 6" & 8" bottom knockouts.

Catch Basin Assemblies & Part Details

Polymer concrete catch basins can be used as standalone area drains or as the outlet to a trench run. They provide the highest hydraulic output and allow access to the pipe system for maintenance.

Series 900 catch basins are **in-line catch basins** (same width and visually indistinguishable from the trench run).

CATCH BASIN LOAD STRENGTH

Catch basins with plastic risers/bases should be used in load classes A–D. For heavy duty applications, ACO recommends using polymer concrete risers and catch basins for load class E/F applications.

K300/KS300 Catch Basin Parts

	Part No.		Volume*	Weight
	K300	KS300	gal	lbs
K3-903 In-Line Catch Basin w/ Plastic Base	94614	94615	30.4	88.0
K3-907 In-Line Catch Basin w/ Polymer Concrete Base	97919	97920	32.7	147.3
K3-904 In-Line Catch Basin w/ Plastic Riser & Base	94635	94636	40.2	98.0
K3-908 In-Line Catch Basin w/ Polymer Concrete Riser & Base	97929	97930	41.6	192.3
Series 600 Plastic Riser	99902		9.8	10.0
Series 611 Polymer Concrete Riser	91110		8.9	45.0
Foul Air Trap (fits all plastic basins)	90854		-	1.2

*Volume is up to grate seat and without trash bucket.

BLANKING END PLATES

Blanking plates are supplied with catch basin tops to stop concrete ingress at end of drain run. The plate is fitted by pushing it over the polymer concrete end bar to fit flush with side rails.

FOUL AIR TRAP

A plastic foul air trap that fits into the front or side of plastic in-line catch basins. A coupler is required to connect SCH 40 4" plain end pipe to underground pipe system.

CATCH BASIN CHANNEL CONNECTION

Channels can be connected to catch basin on all four sides in a variety of configurations.

Series 900 Grates - choice of grates to match channel grates with DrainLok or QuickLok® boltless locking. See page 77–78. QuickLok® grates are often paired with removable QuickLok® locking bars for easy access to trash bucket and pipework. One is included in each catch basin assembly.

Top Section - polymer concrete with integrally cast-in galvanized or stainless steel frame. Guides aid connection of male channel ends at #10, 20, 30 and 40 depths. Other channels can be connected by removing wall to required height. Blanking kit supplied with all catch basin options.

Trash Bucket - plastic trash bucket designed to collect debris washed from trench run. Supported in catch basin top to avoid creation of a vacuum and reduction in outflow. K3-904 and K3-908 use a deeper bucket with riser.

Riser - a plastic or polymer concrete riser, supplied with K3-904 and K3-908, designed to provide additional catch basin depth and hydraulic output. Guides on the plastic version enable cutting to size at 2" (50 mm) intervals - minimum 2" and maximum 12" height. Additional units can be used (a maximum of 2 is recommended to ensure snake access is maintained and for structural stability).

Multiple risers can be used.

Base - Plastic or polymer concrete base available. Plastic bases have a range of SCH 40 4", 6" and 8" cut-outs for easy pipe connection. Cut-outs on end and side allow connection of ACO foul air trap. Polymer concrete bases have drill-outs cast on sides for pipe connections.

ST. JOHN NEUMAN CHURCH

Franklin Park, PA
United States

The church was having issues with its stormwater runoff and the city of Franklin Park required a certain amount to be kept on property... but not too much! The old, narrow slot drain was allowing too much water to bypass, therefore it was plain to see that a wider drain was needed, and ACO stepped in!

K300 with Type 860D Slotted Ductile Iron grates were installed, as well as a small StormBrixx tank to detain more of that excess stormwater that the church was struggling with. Way to go by solving their problems with not only one ACO product, but two!

PORTFOLIO

K300/KS300 Grates - DrainLok

KEY

ADA Compliant

Compliant with Americans with Disabilities Act of 2010, Section 302.3 (page 174)

Heel-Resistant

ASME A12.6.3 - 2001 Heel-resistant slot width less than 0.31" (8 mm) (page 174)

Heel-Safe

Heel-safe slot width equal or less than 0.25" (6.5 mm) (page 174)

Slip-Resistant Grates

BNP over 24 (page 174)

Bicycle-Safe

Compliant to Australian Standard AS 3996 - 2006 (page 174)

Non-Metallic

No metallic/magnetic parts included (page 170)

For details on how psi is determined, see pages 161-166.

DRAINLOK - BOLTLESS & BARLESS LOCKING SYSTEM

Factory-fitted locking device removes need for bolts and bars and improves channel hydraulic capacity. The DrainLok mechanism clips into channel edge rail for rapid installation. DrainLok grates are fit with an anti-shunt mechanism that restricts unwanted grate movement when installed, improving durability and longevity of the system.

Fit grate

Position grate onto channel and align anti-shunt detail with recess in rail.

Push down or stand on grate until it clicks into position.

Remove grate

To remove first grate, insert grate removal tool into slots at end of grate, pull up sharply. Remaining grates can be removed by hand.

K300/KS300 Grates - QuickLok®

	Part No.	Length in (m)	Slot Size in	Intake Area in²	Weight lbs						
LOAD CLASS C (EN 1433 - 250 KN) - 56,202 LBS - 967 PSI (COMMERCIAL VEHICLE TRAFFIC)											
PERFORATED STEEL											
	Type 811Q - Galvanized	98967	39.37 (1.0)		63.8	30.9	✗				
	Type 813Q - Galvanized	98966	19.69 (0.5)		31.9	15.0	✗				
				Ø 0.25				✓	✓	✓	✓
	Type 865Q - Stainless¹	98968	39.37 (1.0)		63.8	30.9	✓				
	Type 866Q - Stainless¹	98969	19.69 (0.5)		31.9	15.0	✓				
LOAD CLASS E (EN 1433 - 600 KN) - 134,885 LBS - 2,321 PSI (INDUSTRIAL TRAFFIC)											
LONGITUDINAL IRON⁴											
	Type 878Q - Iron	138130	19.69 (0.5)	1.0 x 0.31	61.8	52.0	✓	✓	✓	✓	✓
SLOTTED IRON⁴

QUICKLOK® - BOLTLESS LOCKING SYSTEM

1

Fit locking bar

Locate locking bar in channel wall recesses by rotating clockwise.

2

Use hammer to tap bar into place, so that serrated ends grip in recess.

3

Fit grate

To install grate, align QuickLok® stud directly over locking bar.

4

Push down or stand on grate until it clicks into position.

5

Remove grate

To remove first grate, insert grate removal tool into slots at end of grate, pull up sharply. Remaining grates can be removed by hand.

6

To remove bar, remove clips then insert screwdriver into hole at end of bar and lever back serrated end, rotate bar free.

MiniKlassik K50/KS50

2" Internal Width General Purpose System

K50 is a 2" internal width system with galvanized steel edge rail for high profile, aesthetic applications where a barrier is required to separate wet and dry areas.

KS50 is the same system, but the edge rail is grade 304 stainless steel. KS50 should be used where increased aesthetics are required, or where increased corrosion resistance is required.

EN 1433 does not cover grates for 2" (50 mm) internal width trench drains, but grates have been load tested in accordance with EN 1433 guidelines. Grates feature patented DrainLok boltless locking systems. Loading is determined by grate up to Load Class C (25 ton).

Typical Applications:

- Pedestrian plazas
- Aesthetic areas
- Paved areas
- Sidewalks

MINIKLASSIK K50/KS50 SELECTION CRITERIA

Light to medium duty loads

Product can be used towards LEED & EPA requirements

Resistant to many everyday chemicals

Multiple grate options to meet legal requirements

Multiple grate options to meet design requirements

Limited hydraulic capacity

Constant depth channels

MiniKlassik Features

K50/KS50 Parts

Part No.		Invert Depth	Overall Depth	Volume	Weight
K50	KS50	in (mm)	in (mm)	gal	lbs
04071	06750	2.90 (74)	3.50 (89)	0.64	18.0
95395	95403	-	3.50 (89)	-	0.3

Constant Depth Channel - 39.37" (1 m)

Steel Closing Cap

Notes

1. Preformed 1.5" dia. drill-out outlet on underside of channel provides a flow rate of 12.7 GPM - 0.03 CFS.
2. MiniKlassik does not fit with any ACO catch basin - discharge through vertical outlet only or contact ACO for additional advice.

Meter Channel

Closing Cap

KEY

ADA Compliant

Compliant with Americans with Disabilities Act of 2010, Section 302.3 (page 174)

Heel-Resistant

ASME A112.6.3 - 2001 Heel-resistant slot width less than 0.31" (8 mm) (page 174)

Heel-Safe

Heel-safe slot width equal or less than 0.25" (6.5 mm) (page 174)

Slip-Resistant Grates

BPN over 24 (page 174)

Bicycle-Safe

Compliant to Australian Standard AS 3996 - 2006 (page 174)

Non-Metallic

No metallic/magnetic parts included (page 170)

For details on how psi is determined, see pages 161-166.
