

### NOTE ON BEAD SIZE

Required bead size is dependent on several factors.

- Intended use (for rough concrete, pipe penetration, pre-cast segments, sheet pile, cold joints, etc.)
- Hydrostatic head
- Concrete coverage
- Rebar placement

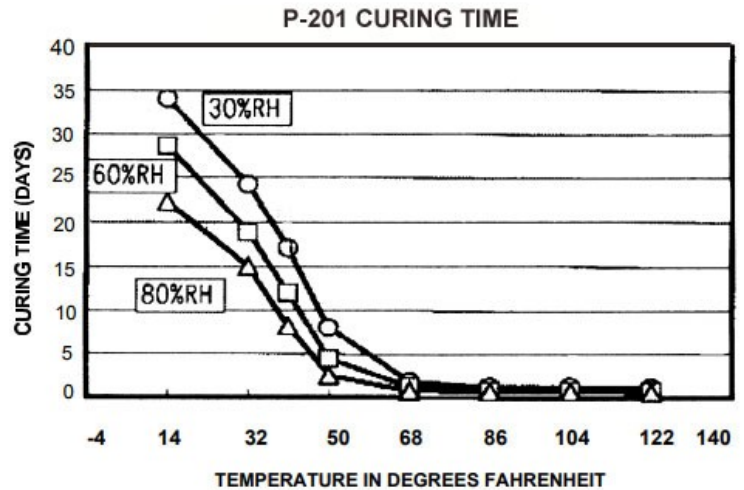

### NOTE ON CURING INFORMATION

Curing time listed below is based on a 10mm x 10mm bead size and a complete cure (polymerization).

Curing and expansion are two different functions. Curing does not effect expansion. In some cases (depending on use), a complete cure is not necessary.

Curing time is also dependent on bead size. A smaller bead size will cure more quickly.
