

Chemical Compatibility

The following information is based on full immersion laboratory tests and manufacturer's data. In some environments, splashing may lead to further corrosion than indicated due to the evaporation of water. Regular washdown is recommended in these situations. All data represents the best available information, is believed to be correct, and is not a warranty of product performance. User tests are recommended to determine actual suitability of service, for which AMICO-Seasafe® will gladly supply grating samples. AMICO-Seasafe® does not take responsibility for design or suitability of materials for service intended, nor will AMICO-Seasafe® be held liable for consequential or special damages due to defective material or workmanship including, without limitation, labor charge and/or other expense of damage to properties resulting from loss of materials or profits, or increased expenses of operation.
