

# Chamfered / Bull Nose Reveals

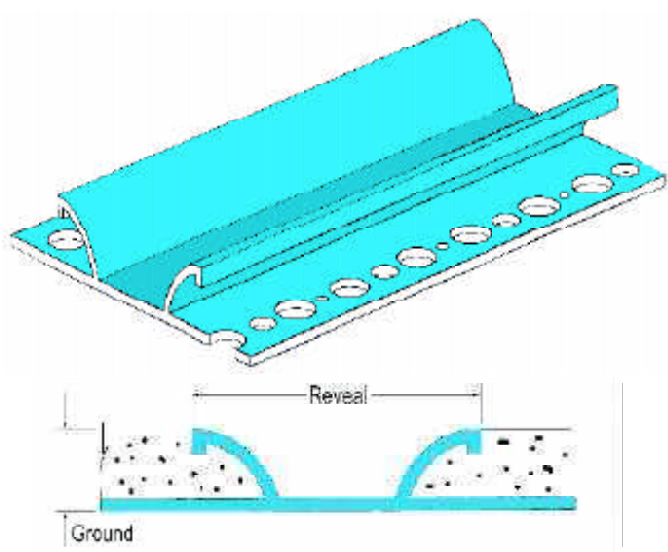

## AMICO Vinyl Stucco Chamfered and Bull Nose Reveals

are used to provide an architecturally pleasing break in the surface area of a stucco wall. Chamfered and Bull Nose reveals are an improvement over standard stucco reveals in that they offer a new more appealing look to the design and an improved mechanism for stucco embedment. This will improve the bond between the stucco and the joint to help reduce separation at these locations. To function properly the stucco should be forced under the lip of the bead.

These **patent pending** products were designed to satisfy the demand for innovative and creative stucco accessories. When used with casing beads of the same design and our Bull Nose Corner Beads, the entire look of the stucco assembly is enhanced. Reveals are not to be considered or used as expansion joints. All joints should be imbedded in caulk and caulked after installation if necessary.
