Control Joints versus Expansion Joints

Control Joints (CJ) are 1-piece joints designed to relieve stress and minimize cracking; they accommodate initial stucco shrinkage and minor thermal movement. The Control Joints are required to form membrane panels no larger than 100 sq.ft for ceilings and 144 sq. ft. for walls. **Expansion Joints (EJ)** are 2-piece joints designed to accommodate a full break through the structure across dissimilar surfaces or to deal with some minor structural movement.

AMICO Control Joint (#15 Joint or M-Type) is designed to provide for movement to accommodate expansion and contraction caused by initial stucco shrinkage and minor thermal movement. Produced in galvanized steel and zinc alloy in 10' lengths. Comes pre-taped to ensure a clean joint.

Griplock J Control Joint (#XJ15 Joint) is similar to the M Control Joint except the J design provides locking of the stucco to the edge of the joint. This design helps reduce stucco separation at the edge of the joint when stucco is forced under the J flange. Produced in 10' lengths. Griplock J comes pre-taped to ensure a clean joint.

3/4"	24	Galvanized Zinc	77 lbs. 64 lbs.	20	1540 lbs. 1280 lbs.
7/8"	24	Galvanized Zinc	80 lbs. 66 lbs.	20	1600 lbs. 1320 lbs.

Zinc Control Joint has a solid flange with large holes that aid in the attachment of adjoining metal lath. The improved shoulder design allows for easier stucco embedment and increases holding capacity at the joint to minimize cracking. CJ comes pre-taped to ensure a clean joint. Produced in 10' lengths.
