

A lush tropical waterfall scene with the Ardex Henry logo carved into the rock face. The logo consists of the word "ARDEX" in a stylized, rounded font inside an oval, with "HENRY" in a bold, blocky font below it. The waterfall is surrounded by dense green foliage, including large ferns and red-leafed plants in the foreground.

**ARDEX  
HENRY**

# **Environmental & LEED® Contributions**

There has been a significant increase in the demand for “green” building products over the past decade. Green building has increased from \$12 billion in 2008 to \$60 billion in 2010 with forecasted continued growth.

ARDEX and HENRY® products are developed to be environmentally friendly with GreenLine® Environmental Technology. Introduced in 2002 for HENRY adhesives, GreenLine Environmental Technology has been adapted to include the ARDEX product line. ARDEX & HENRY GreenLine product standards:

- ◆ Very low to no VOC emissions
- ◆ Low odor
- ◆ Can contribute to USGBC LEED® points
- ◆ South Coast AQMD Rule 1168 compliant
- ◆ Antimicrobial

An environmental innovation leader since 1992, HENRY was the first flooring adhesive company to develop solvent-free adhesives with ultra-low VOC emissions and virtually no odor. HENRY continues to improve formulations to become more environmentally friendly which includes biobased adhesives and certifications by:

- ◆ Carpet & Rug Institute (CRI) GreenLabel Plus™
- ◆ Resilient Floor Covering Institute (RFCI) FloorScore®

ARDEX products also go beyond helping projects qualify for LEED® points, they contribute to environmental sustainability in many other ways.

Third party testing shows that ARDEX powders have ultra-low VOC emissions.

ARDEX underlayments, patches and concrete restoration products allow for the reuse of existing materials. Not having to tear out and replace an existing concrete slab saves on raw materials and energy...not to mention a large cost savings.

ARDEX decorative, polished and other concrete wear surfaces help to save energy and resources by reducing the need for manufactured floor coverings, adhesives, etc. In addition, concrete floors as a wear surface have many other environmental benefits including:

- 
- Energy efficiency
  - Allergen & dust minimization
  - Recycled materials
  - Low maintenance

ARDEX Self-Leveling Underlayments & Toppings are also ideal for use with radiant flooring systems to provide more comfort at lower temperatures reducing energy usage, as well as the amount of forced air particles and allergens in the air.

ARDEX Americas has established a company-wide commitment to being a good environmental neighbor through product development, our manufacturing processes and empowering our employees to be stewards for the environment. Some examples include:

- ◆ Recycling programs at all of our facilities
- ◆ Energy efficient equipment, lighting and water systems
- ◆ Community involvement; Adopt-A-Highway and Habitat for Humanity

At ARDEX Americas being “green” isn’t just a slogan, *it’s part of our culture.*
