

ARDEX TECHNICAL UPDATE

Update 157
November 15, 2023
From: ARDEX Technical Department

ARDEX WA Product Update and Availability

ARDEX WA™ Brilliant White, Polar White, Fresh Lily, Sugar Cookie, Antique Ivory, Natural Almond, and Natural Bone have been suspended as a grout due to raw material concerns that may affect their formulas. This decision aligns with our commitment to provide only those materials that meet the highest quality standards. The suspension of these colors only affects ARDEX WA.

For future installations where an epoxy grout is required, please note that ARDEX WA remains available in 29 colors. In addition, ARDEX WA Polar White is the only suspended color to be used as an adhesive. Where an epoxy grout is not required, please consider using ARDEX DG 1, our latest one component grout which provides excellent color consistency and stain resistance. Also, ARDEX grouts ARDEX FL, ARDEX FG-C, ARDEX FH are still available.

The technical details for these products can be found on the website referenced below. Our decision to suspend these colors in ARDEX WA in no way affects the warranty coverage or technical support provided for any previously completed installation of this material. Should you have any questions, please contact. They will be happy to answer any questions and provide any additional information.

Should you have any questions on this information, please contact your [local Sales Professional](#).
