

Armstrong
CEILING SOLUTIONS

## FASTER. EASIER. BETTER.

FrameAll ${ }^{\text {TM }}$ Drywall Grid offers a worry-free approach to incorporating hills, valleys, undulating waves, vaults, and domes into your design. Combining our faceted main beam with our RC2 clip allows you to:

Create custom radii to suit any design
Have ultimate control of the curve
Expand your design beyond traditional pre-selected or pre-determined radii

## FRAMEALL ${ }^{\text {M }}$ Drywall Grid

Code Compliance You Can Trust

Meets:

- ASTM C635
- ASTM C645
- ASTM C840
- ASTM C754
- City of LA RR 25348
- International Building Code, Continuous Membrane, One Level.

Per Section 25.210 single level drywall ceilings do not require lateral bracing when walls are more than 50 feet apart. When walls are more than 50 feet apart, the ceiling should be examined for bracing requirements

- IBC categories D, E and F single layer drywall
ceilings are exempt from lateral force bracing requirements, regardless of room size.
- Consult local codes for specific requirements.

## Performance

(continued...)

- PeakForm ${ }^{\circledR}$ patented profile increases strength and stability for improved performance during installation
- XL ${ }^{\circledR}$ (staked-on end detail) cross tees provide secure locked connection; fast and easy to install
- SuperLock ${ }^{\text {TM }}$ main beam clip is engineered for a strong secure connection and fast accurate alignment confirmed with an audible click; easy to remove and relocate
- Knurled Ridges on cross tees for speed of screw insertion during board installation

## Performance

(...continued)

- ScrewStop ${ }^{T n}$ reverse hem prevents screw spin off on 1-1/2" wide face
- Faceted main beam - pre-notched main beam to simplify assembly of curved sections; all notched locations along main beam require installation of RC2 clip
HD8906F08 - Prenotched 8" O.C. HD8906F16 - Prenotched 16" 0.C.
- Rotary-stitched - Greater torsional strength and stability
- $1-1 / 2^{11}$ wide face main beams and cross tees - easy installation of screw applied gypsum wallboard
- G40 Hot dipped galvanized coating corrosion resistance
- G90 Hot dipped galvanized coating superior corrosion resistance for exterior applications (HD8906F08 and HD8906F16 not available in G90 coating)
- Cross tee spacing:

24" 0.C. for $5 / 8^{\prime \prime}$ drywall 16" 0.C. for $1 / 2^{\prime \prime}$ drywall 8" 0.C. for tight radius

## COMPONENTS

## FACETED MAIN BEAM

HD8906F08 - Faceted 8" 0.C. Use for radius 15 ' or less

HD8906F16 - Faceted 16" 0.C. Use for radius over 15' (Directional Main Beam)

$\dagger$ Type "F" fixture compatible

* G90 Cross Tees are not manufactured with knurled ridges

## CROSS TEES

† Type "F" fixture compatible

* G90 Cross Tees are not manufactured with knurled ridges

NOTE: All items available in High Recycled Content (HRC) as special order.

CORROSION PREVENTION
Corrosion prevention is an essential factor in the economical utilization of galvanized sheet metal for ceiling grid. Armstrong provides G40 for interior construction per ASTM C645. When conditions include exposure to extreme moisture and salt water, G90 is available per ASTM A653.

NOTE: High Recycled Content (HRC) grid items are available as a special order.

## AXIOM ${ }^{\circledR}$ TRIM

## AXIOM ${ }^{\circledR}$ TRANSITIONS TRIM

Material: Extruded aluminum, alloy 6063
Length/Item
Description

Material: Commercial-quality, hot dipped galvanized steel

## DRYWALL GRID ACCESSORIES

A variety of drywall grid accessories are available to provide problem-solving solutions that save time, labor, and money. For a complete list of accessories, request submittal BPCS-3082.

| Item Number | Quantity |  |
| :--- | :--- | :--- |
| DWACS | 100 | Drywall Attachment Clip facilitates transition from drywall <br> to acoustical ceiling; locks under bulb of grid section to <br> prevent upward movement and provide secure attachment <br> surface on one side of exposed grid. |
| DW30C <br> DW45C <br> DW60C <br> DW90C | 250 | 30-, 45-, 60- and 90-degree Drywall Angle Clips are used <br> to create positive and secure angles for drywall and ceiling <br> installations on either main beams or cross tees. |

## CURVED

MAIN BEAMS

## CREATING CURVES

- Creating curved framing for drywall is easy and offers unlimited possibilities.
- Custom radii to suit any design installation.
- You control the curve.
- Not limited to a pre-selected or pre-determined curved radius.
- Full range of clips and accessories make installation easier than bending stud and track.

Radius and drywall thickness will determine on-center spacing of cuts. Refer to "Establishing An Arc" on page 9 for creating a curved template.

Install RC2 clip using four screws per clips.
RC2 Clip is used to secure the main beam at the desired angle in curved ceiling with rout for installing cross tees. Refer to "Making a Template" on page 9.

> RC2 Clip must be installed at all knockout locations when used to frame a flat or curved ceiling.

## ESTABLISHING AN ARC

How to draw a radius on a template (plywood, gypsum board, etc.)
1 Establish a center line.
2 Mark 2' increments on line perpendicular to center line.

Example: 43' arc using chart on page 16.

1 Cut along the arc and remove section of template
2 Cut main beam as required and position along the cut radius on the template (use the chart on page 20).

3 At 2' marks, identify points of arc below perpendicular line (maintain consistent spacing of point). See radius charts on page 20.
4 Connect points to form a smooth arc.

## COMPLETING THE TEMPLATE - OPTION 1

3 Screw RC2 clips to faceted main beam at all knockout locations.*
4 On the template, mark a rout location reference point to maintain consistent rout location.

## COMPLETING THE TEMPLATE - OPTION 2

1 Draw radius on board.
2 Screw flex track to board along radius line.
3 Cut main beams as required and position along the flex track on the template.
4 Screw RC2 clips to faceted main beam at all knockout locations.

5 On the template, mark a rout location reference point to maintain consistent rout location.

- Contractors' efficiency and understanding of the suspended grid system construction provides performance benefits and cost savings.
- An unlimited range of vaults and valleys can be constructed using faceted main beams made on the job to meet design needs.
- Single and multiple curved ceilings can be framed quickly and easily.

1 Hanger wires must be minimum 12 gauge and spaced along the main beams not more than $4^{\prime} 0 . C$. for gypsum board construction and not more than $3^{\prime} 0 . C$. for plaster work (spaced as required to support load).
2 Add vertical braces as required to stabilize the frame.
3 Thickness of the sheeting material is determined by its plasticity. Refer to table titled "Drywall Bending Radius" on page 19.
4 For vaults, space the main beams 4' 0.C. for gypsum board construction and 3' 0.C. for plaster. Angle or channel molding is used to frame the ends of the structure.

ARCHES AND
BARREL VAULTS

## BARREL VAULT

## WORKING WITH DOMES

Domes, like arches, have many variable characteristics that make each design unique. With a suspended drywall grid system, you can easily create the desired look of domes ranging from simple to complex.

1 Determine the starting point at the top and bottom of the dome.
2 Prepare a sheet metal disk or donut for the top of the dome. The disk should be one to two feet in diameter and should be fabricated from steel with a thickness of at least 25 -gauge thickness. Note that the center of the dome may need to be open to receive an electrical box, pole, or some other architectural detail. Refer to "Options for Top of Dome" on page 17.
3 Prepare a ring for the base of the dome from rolled angle or channel.
4 Attach curved main beams to the disk at the top of the dome and to the ring at the bottom with sharp point pan or wafer head screw (by others).
5 Mains should be spaced no greater than 4' 0.C. (measured at the bottom ring). Install main beams 2' 0.C. for a radius of 15 ' or less. (Refer to Radius Chart on page 22.)
6 Use cross tees cut to the appropriate length and screwed to the flange of the main beams to complete the dome frame structure.
7 Cross tees are not required near the top of the dome when the space between mains becomes less than 16 ".
7 The sheathing must be cut into pie shaped sections and screw attached to the framework.

Folded Plate Dome

## COMPONENTS

## OTHER DOMES

## Saucer Dome Up

Saucer Dome Down

Checker Board Dome
(step down)

Egg or Elliptical Dome

Pole Dome

Step Up Dome

Offset 2 way Radius Dome
Column Ring Made from a Metal Angle

| Material | Minimum Radius (dry) | Drywall Bending Radii |  | Maximum Cross Tee Spacing (wet) | Water Required Per Panel (oz.) |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Maximum Cross Tee Spacing (dry) | Minimum Radius (wet) |  |  |
| 1/4" Hi-flex Gypsum | 32 " | $9{ }^{\prime \prime}$ | 20" concave <br> 14" convex | 8" concave <br> 6" convex | - |
| 1/4" Gypsum | $5^{\prime}$ | 8" | $2^{\prime}$ | $6{ }^{\prime \prime}$ | 30 ounces |
| 3/8" Gypsum | 7-1/2" | - | $3^{\prime}$ | 8" | 35 ounces |
| 1/2" Gypsum | $20^{\prime}$ | $16^{\prime \prime}$ | $4^{\prime}$ | 12 " | 45 ounces |
| 5/8" Gypsum | $28^{\prime}$ | 24 " | - | - | - |

NOTE: Refer to gypsum wallboard manufacturer for additional information.
If required, apply water to the side of the panel that will be in compression. Apply the water uniformly over the surface of the boards.
Stack moistened boards on a flat surface and cover with plastic sheeting. Allow water to soak into the panels for at least 1 hour before application to the frame. Allow installed panels to dry for 24 hours before finishing.

## CONTROL JOINTS

Please refer to ASTM C840 Section 20.3.3-20.4 for control requirements.

## Non-Module Cut and Screw Application, Metal-to-Metal

Ceiling expansion joints are installed to separate the metal suspension system when expansion joints occur in buildings, when span is over 100' or when metal changes direction. Expansion joints are required to separate a system in T -, $\mathrm{H}-, \mathrm{L}$ - and $\mathrm{U}-$ or Circle-shaped buildings to eliminate cracking from expansion. Expansion and control joints look similar but perform different functions.

| :--- | :--- | :--- | :--- | :--- |
| 7858 | $120^{\prime \prime}$ | 20 | 240 | 67 |

DRYWALL ANGLE MOLDING

| HD7801G90 | $120^{\prime \prime}$ | 30 | 300 | 38 |
| :--- | :--- | :--- | :--- | :--- |
| KAM-12 | $144^{\prime \prime}$ | 30 | 360 | 31 |
| KAM-10 | $120^{\prime \prime}$ | 30 | 300 | 49 |
| LAM-12 | $144^{\prime \prime}$ | 30 | 360 | 31 |
| LAM-151220E | $144^{\prime \prime}$ | 10 | 120 | 39 |

SIMPLECURVE ${ }^{\circledR}$

| SC151220EQ | $148^{\prime \prime}$ | 10 | 124 | 40 |
| :--- | :--- | :--- | :--- | :--- |
| SC151225 | $148^{\prime \prime}$ | 10 | 124 | 26 |
| SC21220EQ | $148^{\prime \prime}$ | 10 | 124 | 52 |
| SC21225 | $148^{\prime \prime}$ | 10 | 124 | 34 |

Example calculation based on $5,100 \mathrm{SF}$ ceiling:
Main beam at 48" 0.C.
5,100 SF x $.25=1,275$ LF
$1,275 \mathrm{LF} \div 144 \mathrm{LF} / \mathrm{Ctn}=9$ cartons needed
Cross tee at 16" 0.C.
5,100 SF x . $76=3,876$ LF
$3,876 \mathrm{LF} \div 144 \mathrm{LF} / \mathrm{Ctn}=27$ cartons needed

Estimating Lineal Feet of Grid Based on Square Footage of Ceiling

| Estimating Lineal Feet of Grid Based on Square Footage of Ceiling |  |
| :---: | :---: |
| 0.C. Spacing <br> of Component | Percent of <br> Square Footage |
| $8^{\prime \prime}$ | $108 \%$ |
| $12^{\prime \prime}$ | $100 \%$ |
| $16^{\prime \prime}$ | $76 \%$ |
| $20^{\prime \prime}$ | $60 \%$ |
| $24^{\prime \prime}$ | $50 \%$ |
| $30 "$ | $40 \%$ |
| $36^{\prime \prime}$ | $33 \%$ |
| $48 "$ | $25 \%$ |
| $60 "$ | $20 \%$ |
