

# ERAMEAL® DRYWALLGRID STUCCOOPLASTER Armstrong® World Industries

# FASTER. EASIER. BETTER.

FrameAll<sup>™</sup> Drywall Grid installs faster than traditional methods, which helps you complete jobs under cost and ahead of schedule.

FrameAll Drywall Systems are manufactured to meet or exceed ASTM standards and code requirements and are engineered to provide economical alternatives to stud and track construction.

We provide pre-engineered solutions for direct-todeck installations, vertical drops, and short spans.

# **CODE COMPLIANCE YOU CAN TRUST**

#### Meets:

- ASTM C645
- ASTM C840
- ASTM C841
- ASTM C842
- ASTM C926
- ASTM C1063
- ASTM C754

- ICC Evaluation Report Number ESR-1289
- City of LA RR 25348
- Miami/Dade wind uplift NOA #15-0127.04 – 03/17/15
- Miami/Dade Impact NOA #14-1204.05 –
- 10/07/14
- Consult local codes for specific requirements

# **PERFORMANCE (cont...)**

- PeakForm<sup>®</sup> patented profile increases strength and stability for improved performance during installation
- XL<sup>®</sup> (staked-on end detail) cross tees provide secure locked connection; fast and easy to install
- SuperLock<sup>™</sup> main beam clip is engineered for a strong secure connection and fast accurate alignment confirmed with an audible click; easy to remove and relocate

# (...cont.) PERFORMANCE

- Knurled Ridges on cross tees for speed of screw insertion during board installation
- ScrewStop<sup>™</sup> reverse hem prevents screw spin-off on 1-1/2<sup>"</sup> wide face
- Rotary-stitched Greater torsional strength and stability
- 1-1/2" wide face main beams and cross tees – Easy installation of screw applied gypsum wallboard
- G90 hot dipped galvanized coating Superior corrosion resistance for exterior applications

- FrameAll Drywall Grid System
- Heavy-duty load rating Minimum 16 lbs./LF on main beams and cross tees
- Wind Load construction available, including Miami Dade/Broward County, Florida
- Pre-engineered stucco products space tees to match lath dimensions

## **TABLE OF CONTENTS**

- 2 Code Compliance
- 2-3 Performance
  - 4 Components
- 5-6 Moldings/Transition Moldings
- 7-8 Axiom<sup>®</sup> Trim
  - 9 Axiom Building Perimeter System
- 10-11 Rout Locations
- 12-13 Accessories
  - 14 System Framing
  - 15 Type F Fixtures
- 16-18 Suspended Drywall Grid System
  - 19 Wire Loading
  - 20 Trapeze Supported Solutions
  - 21 Multi-Layer Ceilings
- 22 Exterior Wind Load Data
- 23-26 UL® Fire Resistive
  - 27 Seismic Installations
  - 28 Load Data
  - 29 Basic Products
  - 30 Sound Control
- 31-32 Assemblies
  - 33 Estimating

# **CORROSION PREVENTION**

Corrosion prevention is an essential factor in the economical utilization of galvanized sheet metal for ceiling grid. Armstrong provides G40 for standard construction per ASTM C645. When conditions include exposure to extreme moisture and salt water, G90 is available per ASTM A653.

# **MAIN BEAMS**

7914	120" F Vertical Transition Molding	15/16" horizontal	15/16"	1-1/2"	

\* 7904PF and 7905PF feature protective film on the acoustical wall angle flange for faster, easier finishing.

# **WIRE LOAD DETAILS**

#### STUCCO/PLASTER INSTALLATION AND DETAILS

- Install the main beams with 9-gauge wires. Space main beams 36" O.C. Hanger wire and compression post spacing as required for specific wind load and plenum depth.
- 2 Install 36" cross tee to required O.C. spacing.
- 3 Isolation at perimeters is mandatory when installing any stucco system. Install perimeter channel molding at wall/ceiling junctures to support tees independent of walls. Use main beam at cut cross tee perimeters and galvanized track on main beam perimeters.
- 4 Install 3.4 Lb. 3/8" galvanized diamond mesh lath with wafer head sharp point screw to cross tees (use cadmium coated screws on exterior applications). Lath options:
  - a. 3/8", 3.4# flat rib diamond mesh lath 27" × 8'-0"
  - b. 3/8", 3.4# rib diamond mesh lath 27" × 8'-0"
  - c. 3/8", 3.4# high back rib diamond mesh lath 27" × 8'-0"
  - d. 3/8", 3.4# paper back diamond mesh lath 27" × 8'-0"

#### **STUCCO/PLASTER GRID SUSPENSION INSTALLATION**

- 5 Expansion Joints Installed in accordance with Metal Lath/Steel Framing Association Specifications/Standards.
- 6 Control Joints Installed in accordance with Metal Lath/Steel Framing Association Specifications Standards.
- 7 Plaster stops, grounds, and corner pieces are attached to system with wafer head screws and/or 18 gauge tie wire.
- 8 Plaster or stucco mixture and thickness to be in accordance with manufacturer's recommendations and applied: ASTM C842 – For Gypsum Plaster ASTM C926 – For Portland Cement-based Plaster.
- 9 For exterior application use steel studs for vertical bracing (see page 10 for wind load).

For further information, contact your local representative or TechLine at 877 276 7876.

#### **CONTROL JOINTS / EXPANSION JOINTS**

**Reference section** 7.11.4.1-7.11.4.3 for location and spacing of control joints.

Ceiling expansion joints are installed to separate the metal suspension system when expansion joints occur in buildings,

or when metal changes direction. Expansion joints are required to separate a system in T-, H-, I-, and U- or circle-shaped buildings to eliminate cracking from expansion.

#### MEMBRANE LOAD VALUES

- 2 Positive Attachment top and bottom.
- 3 18-Gauge 3-5/8" studs 2' O.C.
- 4 Main Beams 3' O.C. / Cross Tees 16" O.C 3' long.
- 5 #9 Hanger Wire

# **EXTERIOR WIND LOAD BRACING TO METAL BAR JOISTS**

For maximum wind speed of 172 MPH.

- 1 #16-Gauge CRC Channel Bracing required at 1/3 Point at 20' vertical drop.
- 2 Positive Attachment top and bottom.
- 3 16-Gauge 3-1/2" studs 2' 0.C.
- 4 Main Beams 3' O.C. / Cross Tees 16" O.C 3' long.

# **ESTABLISHING AN ARC**

Draw radius on template (plywood, gypsum board, etc.)

- 1 Establish a center line.
- 2 Mark 2' increments on line perpendicular to center line.

#### Example: 43' arc using chart on page 19

- 3 At 2' marks, identify points of arc below perpendicular line (maintain consistent spacing of point) See radius charts on page 17.
- 4 Connect points to form a smooth arc.

# **COMPLETING THE TEMPLATE - OPTION 1**

- 1 Cut along the arc and remove section of template.
- 2 Cut main beam as required and position along the cut radius on the template (use chart on page 19).
- 3 Screw RC2 clips to faceted main beam at all knockout locations. \*
- 4 On the template, mark a rout location reference point to maintain consistent rout location.

# **COMPLETING THE TEMPLATE - OPTION 2**

- 2 Screw flex track to board along radius line.
- 3 Cut main beams as required and position along the flex track on the template.
- 4 Screw RC2\* clips to faceted main beam at all knockout locations.
- 5 On the template, mark a rout location reference point to maintain consistent rout location. Contractors' efficiency and understanding of the suspended grid system construction provides performance benefits and cost savings.
- An unlimited range of vaults and valleys can be constructed using faceted main beams made on the job to meet design needs.
- Single and multiple curved ceilings can be framed quickly and easily.

\*Screw RC2 on cavity side of web
