Data Center Design: STRENGTH

Where you need it most

Data Centers come with their own set of design challenges. See how we've made it easier to get the high-strength solutions you need for your unique project.

Grid ►

DynaMax[®], DynaMax[®] LT & DynaMax[®] Plus Suspension Systems

Provides an attachment platform for cable trays, equipment partitions, and hot and cold containment barriers from the structure to below the ceiling plane while eliminating penetrations through the ceiling.

KEY SELECTION ATTRIBUTES	DynaMax Structural Grid	DynaMax LT Structural Grid	DynaMax Plus Structural Grid
Ideal combination of a finished ceiling system with a structural solution	•		•
Easy integration into a conventional grid system using AXTBC clip and DynaMax [®] boss channels	•		•
Integrate seamlessly with select Armstrong [®] ceiling panels for a complete ceiling system solution	•	•	•
Supports up to a 1,200 lb. point load rating using 3/8"-16 threaded rod at 48" x 48" connection points	•		•
Factory-cut notches on main beams for faster and easier installation	•	•	•
Factory gasketing available	•	•	•
Suspension system has continuous threaded boss channel, allowing 3/8"-16 threaded rod to be installed to the suspension system at any location	•	•	•
X-Brackets attachment points for 48" x 48" suspension from building structure	•	•	•
Available in 24" x 24", 24" x 48", and 48" x 48" suspension system layouts	•	•	•
Fully accessible system allows for future expansion and upgrade	•	•	•
Non-progressive installation gives the ability to remove or replace a section of the system without the need to dismantle those components around it	•	•	•
Cross tees not bearing any load are removable for plenum access without compromising the structural integrity of the system	•	•	•
10-Year Limited Suspension System Warranty; 30-Year Limited Ceiling System Warranty	•	•	•
Allows for longer spans (6' and 8') while also providing greater load-carrying capacity			•
6' spacing allows for direct attachment to steel joists or pre-cast concrete tees			•
Eliminate 1/3 or 1/2 of threaded rods/accessories utilized today for typical 48" hanging spans			•
Supports point loads of up to 1,090 lbs. at the mid-point of 4' spans (up to 1,850 lbs. for static point loads)			•
DATA CENTER-SPECIFIC ATTRIBUTES			
Provides a suspension platform or attachment for data center cable trays, equipment, partitions and hot and cold aisle containment barriers from building structure to below the ceiling plane	•	•	•
Finished ceiling system offers a containment barrier to protect servers from debris	•	•	•
Controls airflow by eliminating ceiling penetrations	•	•	•
Grid provides increased temperature and pressure management, reduced leakage, and enables the best hot and cold air containment at the ceiling plane when compared to other ceiling types	•	•	•
Available with Ultima [®] AirAssure [®] panels with factory-gasketed edges to provide even greater temperature and pressure management	•	•	•
Lighting, diffuser, and containment options are available from our Data Center lighting and MEP partners	•	•	•

DynaMax[®], DynaMax[®] LT & DynaMax[®] Plus Suspension Systems

How It Works

NOTE: Although the installation layout above is shown with DynaMax Plus grid system details, the same layout and brackets are used with the standard DynaMax system. DynaMax LT uses the Main Beam Splice (DMMBS) in place of the DynaMax I-Bracket

DynaMax[®], DynaMax[®] LT & DynaMax[®] Plus Suspension Systems

Installation & Layout Overview

NOTE: DynaMax Plus threaded rod drops can be spaced at increased spans of 6' or 8' due to the system's greater load-carrying capability.

* DynaMax LT uses the Main Beam Splice (DMMBS) in place of the DynaMax I-Bracket.

NOTE: Ceiling panels are specially sized and engineered for the DynaMax and DynaMax Plus suspension systems and must be used with the systems. These panels do not fit in other suspension systems. For additional info, please contact your local Armstrong rep.

* NRC achieved with acoustical infill (Item 8200T10).

Continuous Load Path (CLP)

NOTE: The load is completely supported by the threaded rod to the deck and is not transferred to the suspension system. The CLP with coordinating 7'-6" and 9'-6" main beams creates typical 8' and 10' layouts.

The CLP 6" main beam component integrates with the Prelude® XL® suspension system, creating a pathway for the threaded rod to pass through the ceiling plane without unwarranted air penetration.

- Allows a threaded rod to connect to the deck without interrupting the ceiling plane
- Designed to accommodate 1/2" and 3/8" threaded rods with point loads of up to 1,800 lbs. per 3/8" threaded rod and up to 3,300 lbs per 1/2" rod with no weight transferred to the ceiling system
- Provides flexibility to design data halls that require heavier loads by using standard Prelude XL ceiling system in main or high load trunk lines
- Helps to manage air flow without unwarranted air penetrations in the ceiling grid or panels
- Reduces number of hanger wires

Load Path (CLP)

How It Works

Prelude[®] XL Max[®]

The Prelude[®] XL Max[®] suspension system supports single point loads up to 300 lbs. for cable trays, busbars, hot aisle containment, and more.

Load connector clips attach to the face of the suspension system to eliminate unsightly threaded rod penetrations through the ceiling plane minimizing unwanted air infiltration while improving access, cable tray layout options, and aesthetics.

Integrated hanging clips allow connection to 3/8" threaded rod for flexible and reconfigurable overhead cable tray and electrical distribution without a separate strut channel system.
