- Notes:**
1. *Indicates maximum span controlled by deflection.
 2. All loads are applied perpendicular to surface of panel.
 3. No increase for wind loading has been assumed.
 4. Shaded area denotes loads at which deflection of the panel in the transverse direction due to static gravity load may cause permanent deformations.

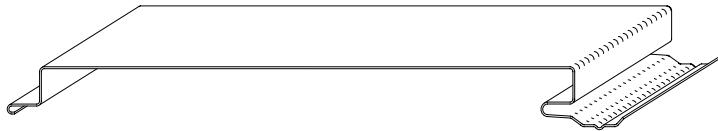

5. Since allowable loads and spans can be affected by actual conditions of use, information in these tables is intended for use only by those qualified to assess these effects.

- Notes:**
1. Minimum 1.5" bearing assumed.
 2. Connection of panel to supporting structure not investigated.
 3. Minimum delivered thickness assumed to be 95% of design thickness.
 4. Span lengths with * are controlled by deflection.
 5. These load tables conform to the 2007 edition of the AISI "North American Specification for the Design of Cold Formed Steel Structural Members."
 6. Since allowable loads and spans can be affected by actual conditions of use, information in these tables is intended for use only by those qualified to assess these effects.
 7. Load tables are based upon section property analysis. Other factors such as fastener adequacy may apply to allowable span conditions per project.
