

THE ATAS DIFFERENCE

TOPIC: *Opaline™* PROFILES

Did You Know?

The Opaline Series is a structural panel with concealed fasteners that can be installed on open framing (subject to design considerations). It can also be applied to a solid substrate. Its tongue and groove installation system (positive fastening, without clips) saves time and money, while providing a variety of designs and looks.

The panels are available with smooth or stucco embossed texture, in aluminum, steel, and copper. Ideal applications for Opaline are vertical fascia, soffit, ceiling and in lieu of wide face flashing details.

Features:

- Concealed fasteners
- Available in aluminum, steel, and copper
- Easy to install: positive fastening (no clips)
- Louver venting and perforation available
- Versatile: Mix and match the 10 panel profiles for endless design flexibility
- May be installed horizontally and vertically
