BRICKFORM
A Division of Solomon Colors, Inc.

Brickform® resurfacing products quickly rejuvenate concrete surfaces inexpensively and without significant disruption. Instead of removing old concrete to re-pour a new slab, a layer of overlay can be applied to the surface and then enhanced with stains, coatings, integral color or our line of textured stamps. Rejuvenating surfaces with Brickform® Overlays reduces the need for virgin materials and the amount of waste produced simultaneously. In addition, our overlays contain fly ash, a post-industrial recycled material that reduces the environmental impacts of producing traditional cement and strengthens the final product. In this document find details about these attributes and more.

Brickform Resurfacing Products:

- Micro-Topping
- SM Professional Grade ®
- Stampable Overlay
