

ROOF GARDEN

Sedum Cuttings

Description

CCW sedum cuttings are the most cost-effective method of vegetating your Garden Roof. Available in many different varieties, they are shipped in bulk bins and are sold by the pound. CCW sedum cuttings must be planted with CCW Moisture Retention Gel to ensure that cuttings have adequate moisture to root successfully in a rooftop environment. CCW sedum cuttings are available in insulated boxes containing 25 lbs. of single-variety or mixed cuttings.

Features and Benefits

- Many varieties available
- Easy, low-cost installation
- Rapid vegetative growth
- Require minimum soil depth of only 2.5 inches
- Available as mixture with other varieties

Installation

Once CCW Moisture Retention Gel is distributed across the entire surface of the growth media at a rate of 1 pound per 200 square feet, cuttings should be applied manually or by hand broadcasting. Required rate of cuttings application is 1 pound per 5 square feet for rapid vegetative coverage. After cuttings are applied, the Green Roof must be immediately irrigated to the point of runoff and the Moisture Retention Gel becomes expanded and saturated. It is mandatory that an irrigation system be used during the remainder of the establishment period. The frequency and duration of these irrigation events varies depending on installation time. To determine your project's specific irrigation requirements, please refer to the CCW Green Roof specification.

Note: Product availability dependent on region and installation season.

Warning: Sedum cuttings must be installed within 24 hours of delivery.

Sedum acre 'Gold Moss'

Sedum album 'Coral Carpet'

Sedum hispanicum 'Purple Form'

Sedum kamtschaticum

Sedum kamtschaticum
'Weihenstephaner Gold'

Sedum kamtschaticum
k. variegatum

ROOF GARDEN

Sedum Cuttings

Sedum reflexum 'Blue Spruce'

Sedum rupestre 'Angelina'
