

# **HP Fastener**

## **Overview**

Carlisle's HP Fastener is used with various Carlisle fastening plates to secure membrane, insulation, and Pressure-Sensitive (PS) RUSS strips to a variety of substrates. Specially designed for securement of membrane on Carlisle's Sure-Tough<sup>™</sup> mechanically fastened systems, Carlisle's HP Fasteners are compatible with 22-gauge and heavier steel, CDX plywood, and wood plank deck types. The HP Fasteners are designed to offer a good combination of pull-out, back-out, and corrosion resistance with excellent driving performance.

#### **Features and Benefits**

- » Buttress thread design and wide surface contact provide increased pull-out and back-out resistance
- » Can be used on wood (minimum <sup>15</sup>/<sub>32</sub>" [12 mm] CDX plywood) and steel decks (22-gauge [0.76 mm] or heavier)
- » Mini drill-point is designed to maximize installation efficiency
- » Excellent corrosion resistance, surpassing the FM 4470 corrosion test

#### Installation

No pre-drilling is necessary for wood and steel decks. Simply insert the HP Fastener through an approved Carlisle plate and install with a standard clutch drive electric screw gun (0–2,500 rpm). Optimum fastener performance is achieved when the fastener is installed perpendicular to the deck and into the top flutes of a steel deck.

*Review Carlisle specifications and details for complete installation information.* 

### **Precautions**

- » Eye protection is recommended during drilling and installation of fasteners.
- » Use care to avoid over-driving the fastener.
