

Sure-Seal® EPDM

Dusted Non-Reinforced Membranes

Overview

Carlisle's Sure-Seal EPDM Dusted Non-Reinforced membranes are available in thicknesses of 45-mil (1.14 mm) and 60-mil (1.52 mm), widths of up to 50' (15 m), and lengths of up to 200' (60 m). Ideal for new construction and re-roofing applications, this membrane is available in a Fire Retardant (FR) version that is specially formulated to inhibit the spread of flame and meet or exceed code body testing criteria for fire-retardant roofing membranes.

Features and Benefits

- » Carlisle EPDM has 50 years of proven performance and industry-leading resistance to weathering, with 41,580 kJ/m² total radiant exposure without cracking or crazing
- » Factory-Applied Tape™ seam technology and a full line of Pressure-Sensitive flashing accessories enhance workmanship quality
- » Dark-colored EPDM is the smart choice in colder climates:
 - Reduces heating costs, which are generally 3–5 times greater than air conditioning costs
 - Reduces carbon footprint by lowering heating costs
 - Reduces safety hazards from snow and ice accumulation
 - Reduces hazardous conditions caused by frost, dew, and ice
 - Reduces the potential for condensation problems
- » Life Cycle Assessment using EPA's TRACI model analyzed EPDM, TPO, PVC and Modified Bitumen:
 - EPDM had the lowest global warming potential
 - EPDM had the lowest acid rain impact
 - EPDM had the lowest contribution to smog

- » Numerous studies and real-world experience confirm that Sure-Seal EPDM's 465% elongation and weathering resistance result in superior hail damage resistance (UL 2218 Class 4 Rating)
- » EPDM is the most dimensionally stable, heat-resistant membrane, and stays flexible even in extremely cold conditions down to -40°F (-40°C): see flexibility/torsion DMA data
- » Wide array of design choices that are UL Classified and FM Approved
- » Industry-leading 15-, 20-, and 25-year warranties are available
- » Carlisle manufactures all the major components of a typical roofing system, including membrane, flashings, tapes, adhesives, sealants, insulations, and insulating cover boards

Carlisle's Factory-Applied Tape Seam Technology

The Factory-Applied Tape process results in a reliable seam with greater peel and shear strengths and no entrapped air bubbles. Consistent placement of the Factory-Applied Tape also maximizes the splice area and results in a high-quality seam. Factory-Applied Tape has a shelf life of one year.

Productivity Boosting Features and Benefits:

- » With Carlisle's Factory-Applied Tape, most of the labor to create seams between membrane panels is completed in a quality-controlled, state-of-the-art environment
- » Factory-Applied Tape is available on all Sure-Seal membranes up to 30' (9 m) in width, providing the fastest way to complete a seam in today's roofing market
- » Wider sheets like 16.5', 20', and 25' reduce the frequency of seams compared to 10'-wide sheets

Installation

Sure-Seal 45-mil (1.14 mm) and 60-mil (1.52 mm) membranes are typically utilized in Design A: Fully Adhered (60-mil only), Design B: Ballasted, and Design C: Loose-Laid Protected roofing systems.

For Design A: Fully Adhered Roofing System

Insulation is mechanically attached or adhered to the roof deck. The substrate and membrane are coated with the appropriate Carlisle bonding adhesive. The membrane is then rolled into place and broomed down. To complete seams between two adjoining membrane panels, apply primer to the splice area in conjunction with Carlisle's Factory-Applied Tape. As an alternative, Carlisle's hand-applied SecurTAPE™ may be used.

Sure-Seal EPDM

Dusted Non-Reinforced Membranes

For Design B: Ballasted Roofing System

Insulation is loose-laid over the roof deck. Membrane is loose-laid over the insulation and secured with a minimum 10 lbs (4.5 kg) of ballast per square foot. Design C is a similar system with the insulation installed on top of the membrane. To complete seams between two adjoining membrane panels, apply primer to the splice area in conjunction with Carlisle's Factory-Applied Tape. As an alternative, Carlisle's hand-applied SecurTAPE may be used.

Follow these steps for splicing in temperatures below 40°F (5°C):

1. Heat the primed area of the bottom membrane with a hot-air gun as the top sheet with Factory-Applied Tape is applied and pressed into place.
2. Prior to rolling the splice area with a 2"-wide steel hand roller, apply heat to the top side of the membrane with a hot-air gun. The heated surface should be hot to the touch. Be careful not to burn or blister the membrane.

Review Carlisle specifications and details for complete installation information.

Precautions

- » Use proper stacking procedures to ensure sufficient stability of the materials.
- » Exercise caution when walking on wet membrane. Membranes are slippery when wet.
- » Membranes with Factory-Applied Tape should not be exposed to prolonged jobsite storage temperatures in excess of 90°F (32°C), otherwise the shelf life of the tape may be affected.
- » When membranes with Factory-Applied Tape are used in warm, sunny weather, shade the tape end of the rolls until ready to use.
- » Carlisle Factory-Applied Tape has a shelf life of one year.

Resistance to Outdoor (Ultraviolet) Weathering* Xenon-Arc, total radiant exposure at 0.70 W/m ² irradiance, 80°C black panel temperature	ASTM G155	No Cracks No Cracking 7,560 kJ/m ² 3,000 hrs	No Cracks No Cracking 41,580 kJ/m ² 16,500 hrs	No Cracks No Cracking 41,580 kJ/m ² 16,500 hrs
At 0.35 W/m ² irradiance, 80°C black panel temperature		6,000 hrs	33,000 hrs	33,000 hrs

*Not a quality control test due to the time required for the test or the complexity of the test. However, all tests are run on a statistical basis to ensure overall long-term performance of the sheeting.

Typical properties and characteristics are based on samples tested and are not guaranteed for all samples of this product. This data and information is intended as a guide and does not reflect the specification range for any particular property of this product.

Note: Sure-Seal Dusted Non-Reinforced EPDM membrane meets or exceeds the minimum requirements set forth by ASTM D4637 for Type I non-reinforced EPDM single-ply roofing membranes.
