## 15 Regulatory information

- **Safety, health and environmental regulations/legislation specific for the substance or mixture**

**Dust Emission Study:** CertainTeed Gypsum contracted with an independent third-party test laboratory to conduct industrial hygiene tests on the release of respirable Crystalline silica during the application and sanding of our joint compound products. Initially a bulk analysis was conducted on the majority of joint compounds to identify three products representative of the complete joint compound product line to be used in the application and sanding phase of the test program. The effects of three different grit abrasive papers (fine, medium and coarse) were evaluated with a manual hand pole method during the sanding operation. Air samples were collected within the breathing zone of the worker and within the test chamber during each sanding operation on multiple samples of each joint compound. These tests have shown that none of the air samples collected exceeded the OSHA PEL (Permissible Exposure Limit) or ACGIH®

TLV® (Threshold Limit Value) for total or respirable dust. Respirable Crystalline silica was either not detected, or if detected, the concentration was below the OSHA Action Level of 25 µg/m<sup>3</sup> for all of the air samples collected. Testing has also shown that CertainTeed Dust Away technology offers the lowest levels of both nuisance and respirable dust air concentrations of all the compounds tested.
