Hear Is What Matters

Acoustics is the scientific study of sound. The majority of architectural acoustic situations consist of a source, a path and a receiver. The source can be the neighbour's home theater system, a patient waiting room or the high school band practice room. The receiver can be a person trying to talk on the phone, sitting in an examination room or conducting a class. The sound transmission paths are those building elements through which noise from the source travels to interfere with our daily activities. SilentFX® QuickCut™ Gypsum Board systems address these paths and through proper design and installation contribute to satisfactory sound isolation and privacy.

Some key performance characteristics of good acoustic design are to provide mass to the system with the ability to dampen vibrations caused by sound energy striking the system. SilentFX® QuickCut™ Gypsum Board is engineered using the mass of two dense gypsum board layers with an inner layer of viscoelastic polymer that acts much like a shock absorber to dampen board vibrations. This type of “Constrained Layer Damping” board product performs well acoustically over an extended range of frequencies, resulting in increased Sound Transmission Class (STC) ratings for the systems.

DECIBEL (dB)
A measurement of sound intensity or loudness. The more intense the sound, the higher the dB level.

AIRBORNE VS. STRUCTUREBORNE SOUND
Airborne: Sound transmitted through air.
Structureborne: Sound transmitted through structure of building.

* Recommended minimum STC
Noise leaks, as the term implies, are the result of situations such as unsealed gaps at wall/wall, wall/floor and wall/ceiling junctures, medicine cabinets installed back to back and electrical outlets on each side of a wall sharing the same stud cavity. Flanking paths are those indirect routes that noise can follow to an adjacent room or dwelling, such as openings under doors, air ducts and floors under a common wall. Reducing or eliminating through-wall penetrations and restricting wall penetrations to one per stud cavity assists in achieving the acoustical performance of the wall system. Such noise problems can be greatly reduced by thoughtful planning in the early stages of the building’s design and close supervision with proper attention to small details during construction.

**SOUND TRANSMISSION CLASS (STC) RATING**

A single number rating system that represents the sound transmission loss performance of a wall.

**AMBIENT NOISE**

All sound in a given environment, including sound from outdoors, building services and utilities.

SilentFX® QuickCut™ Noise-Reducing Gypsum Board

For the best in acoustic management.

CertainTeed’s SilentFX® QuickCut™ is a noise-reducing gypsum board specifically designed for systems requiring high STC ratings.

SilentFX® QuickCut™ Noise-Reducing Gypsum Board is specifically designed to reduce airborne sound transmission between two adjoining spaces when used in wall or floor/ceiling assemblies. SilentFX® QuickCut™ features a viscoelastic polymer that installs and finishes like standard drywall, and dampens sound energy. Application of the viscoelastic polymer between two specially formulated dense gypsum cores results in a combination that significantly improves sound attenuation and is ideal for systems requiring high STC performance. Commercial acoustic systems featuring SilentFX® QuickCut™ provide STC ratings of 50 and up. In addition to providing exceptional acoustic performance, this functionally superior board is engineered to score and snap for faster installation and lower labour costs.

SilentFX® QuickCut™ finishes like standard gypsum board

**ENHANCED ACOUSTICAL PERFORMANCE**
STC ratings of 50 and greater

**ENHANCED FIRE RESISTANCE**
Available in 16 mm (5/8”) Type X, UL/cUL Classified and ULC Listed

**MOULD RESISTANCE**
Best possible score per ASTM D3273

**ABUSE RESISTANCE**
Surface abrasion: 2
Soft body: 1

**LOW-EMITTING MATERIAL**
GREENGUARD Gold Certified

**HIGH-DENSITY CORE**
Provides increased mass
SilentFX® QuickCut™ is an excellent acoustic solution for meeting Sound Transmission Class (STC) specifications without complex techniques such as isolation clips or resilient channels. It can also help reduce material usage versus traditional gypsum systems that require high sound attenuation.

MORE RELIABLE THAN CLIPS AND CHANNELS
Clips and resilient channel can easily be short-circuited during the construction process and even afterwards, during picture hanging or pressing of heavy objects against the wall, negatively affecting acoustic performance. These risks are eliminated when using SilentFX® QuickCut™, thus providing more consistent acoustic performance. When used in systems with resilient channel, SilentFX® QuickCut™, can reduce the negative effect of short circuits.

SPACE SAVINGS
The high acoustic performance of SilentFX® QuickCut™ makes it possible to build effective noise-reducing walls with less material, gaining valuable space and saving both construction time and material cost. Less material used also means a more sustainable structure in keeping with today’s green building practices.

Requires “half” the labour
SilentFX® QuickCut™ single layering versus double layering performance. Single layering is faster to install with less labour, higher STC performance and less chance of a bad install.

DOUBLE LAYER 16 mm (5/8") TYPE X  VS  SINGLE LAYER SILENTFX® QUICKCUT™ 16 mm (5/8") TYPE X

DOUBLE LAYER 16 mm (5/8") TYPE X
Thickness: 156 mm (6-1/8")
Sound test: STC 55

SINGLE LAYER CERTAINEED 16 mm (5/8") TYPE X
Thickness: 124 mm (4-7/8")
Sound test: STC 56
2015 National Building Code of Canada

APPARENT SOUND TRANSMISSION CLASS (ASTC)

In previous editions of the National Building Code of Canada (NBC), sound insulation requirements between dwelling units were presented in terms of Sound Transmission Class (STC).

In the NBC 2015, sound insulation requirements are now also presented in terms of Apparent Sound Transmission Class (ASTC). ASTC includes the contributions from flanking transmission of sound and therefore is a better descriptor of the acoustic performance of the building. The ASTC rating between dwelling units must be 47 or greater for compliance with the NBC 2015.

CertainTeed Gypsum contracted with the National Research Council Canada (NRC) to conduct extensive testing and calculation programs for SilentFX® QuickCut™ Gypsum Board on wood and steel stud wall assemblies with example assemblies provided on the following page. For complete details of the ASTC programs, please refer to NRC-CNRC Reports A1-007750.3 (Wood Stud Walls) and A1-010179.1 (Steel Stud Walls) on the NRC-CNRC website or contact CertainTeed Marketing Technical Services at 1-800-446-5284.

Acoustic System

Combining SilentFX® QuickCut™ with SilentFX® Noiseproofing Sealant and SilentFX® Noiseproofing Putty — creates an excellent acoustic system for meeting sound transmission class (STC) specifications without complex techniques. There is no need for isolation clips or resilient channels. This system also helps reduce material usage versus traditional gypsum systems that require numerous layers of drywall.

SILENTFX® NOISEPROOFING SEALANT

Acoustic caulk used to fill gaps between walls and floors and around electrical outlets, light fixtures, windows, and doors.

SILENTFX® NOISEPROOFING PUTTY

Heavy mastic acoustic putty formulated to completely seal electrical outlet boxes, ducts, cables, etc. that could jeopardize acoustic-rated wall assemblies.

A quiet place to heal.

Healthcare facilities need to provide an oasis of quiet — conducive to healing. They are also under pressure to reduce costs and be more responsive to patients. In hospitals with reduced noise levels, patient satisfaction with caregiving is increased and sleep is improved. This leads to faster healing, which can mean shorter stays and reduced costs for both patients and hospitals.

**BENEFITS FOR HEALTHCARE FACILITIES**

- Improves patients’ sleep and healing time, leading to reduced costs
- Increases staff job satisfaction, which can reduce turnover
- Helps meet HIPAA acoustic privacy regulations

Ref: *Sleep Disruption due to Hospital Noises: A Prospective Evaluation, 2012*

For more information about CertainTeed’s ceilings or insulation products, call 1.800.233.8990 or go to www.certainteed.ca/ceilings or www.certainteed.ca/insulation.
More learning with less distraction.

Learning depends on communication between teachers and students. Excessive noise creates a barrier to learning. Noise such as conversations in hallways, sound systems, students in other classrooms and mechanical equipment can hamper student concentration. Background noise causes teachers to raise their voices, which results in vocal strain over time. SilentFX® QuickCut™ specifically reduces sound transmission from adjacent spaces to make it easier for teachers to be heard and students to learn.

**BENEFITS FOR SCHOOLS**

- Reduces distractions so students can pay closer attention and learn more effectively
- Keeps the lines of communication between students and teachers clear and open
- Reduces teacher voice strain and increases effectiveness

For more information about CertainTeed’s ceilings or insulation products, call 1.800.233.8990 or go to www.certainteed.ca/ceilings or www.certainteed.ca/insulation.
Get away from it all.

A hotel’s most important promise to its guests is privacy and relaxation. Guests who feel relaxed and refreshed are more likely to return and recommend the hotel to others. Yet by nature, hotels are busy, noisy places. People come and go around the clock, vacuums are disruptive, foot traffic and conversations can be heard up and down hallways. SilentFX® QuickCut™ enhances the guest experience by providing a sound-buffered oasis of comfort amid the hustle and bustle of the busiest hotel.

**BENEFITS FOR HOTELS**

- Helps guests feel relaxed and comfortable so they want to return
- Isolates noise from other guest rooms, service corridors and mechanical equipment
- Reduces disruptions and distractions in conference rooms and other meeting spaces

For more information about CertainTeed’s ceilings or insulation products, call 1.800.233.8990 or go to www.certainteed.ca/ceilings or www.certainteed.ca/insulation.
Never hear the neighbours.

In a home, good acoustics are even more important to ensure quality of life. SilentFX® QuickCut™ reduces noise between residential units to increase the sense of separation from neighbours that is necessary for comfort and privacy. SilentFX® QuickCut™ gypsum board systems, with an STC rating of 50 or higher, substantially decrease sound transmitted through walls and improve residents’ satisfaction, which leads to less turnover and fewer expenses associated with filling vacancies.

**BENEFITS FOR MULTI-FAMILY HOMES**

- Minimizes neighbourhood noise
- Increases community harmony
- Improves resident satisfaction and peace of mind

For more information about CertainTeed’s ceilings or insulation products, call 1.800.233.8990 or go to www.certainteed.ca/ceilings or www.certainteed.ca/insulation.
Installation and Finishing

INSTALLATION
SilentFX® QuickCut™ Gypsum Board is installed following traditional methods of application and finishing of interior gypsum board products for both walls and ceilings. 13 mm (1/2”) SilentFX® QuickCut™ is for use on interior walls in residential, commercial and institutional applications. 16 mm (5/8”) SilentFX® QuickCut™ Type X is for use on interior walls and ceilings in residential, commercial and institutional applications.

• Plan SilentFX® QuickCut™ board layout to stagger joints from one side of the wall to the other and stagger between board layers for multi-layered assemblies
• Install batt insulation (CertainTeed’s thermal and acoustical fibreglass insulation or equivalent) in cavities
• Use SilentFX® Noiseproofing Putty Pads (or equivalent) or acoustical sealant to seal electrical outlet boxes
• Install SilentFX® QuickCut™ in accordance with GA-216, “Application and Finishing of Gypsum Panels” (ASTM C840, CAN/CSA-A82.31)
• Allow a 6 mm (1/4”) gap around all wall perimeter edges
• SilentFX® QuickCut™ boards are cut by scoring from the face side and snapping the same as standard gypsum board
• Seal the 6 mm (1/4”) perimeter gaps and wall penetrations per ASTM C919 with SilentFX® Noiseproofing Sealant or equivalent acoustical sealant

FINISHING
SilentFX® QuickCut™ Gypsum Board may be finished, painted or wallpapered using conventional gypsum board finishing techniques. The Gypsum Association GA-214, “Recommended Levels of Gypsum Board Finish” should be referenced when specifying the level of finishing desired.

FIRE-RATED ASSEMBLIES
For the installation of fire-rated assemblies, refer to the appropriate UL/cUL or ULC design in the UL/ULC Fire Resistance Directories for details such as board orientation and fastening schedules.

The UL/ULC Type Designation for 16 mm (5/8”) SilentFX® QuickCut™ Type X is Type SilentFX.
Building Responsibly

CertainTeed respects the environment through the responsible development of sustainable building products and systems.

The building industry continues to look for ways to reduce impact on the environment while meeting customer demand for products that deliver beauty, comfort and performance.

CertainTeed’s commitment to these goals is reflected here, highlighting our ongoing effort to become the preeminent supplier of green building materials.

Awareness of the importance of acoustics in sustainable construction continues to grow, and this is evident with the inclusion of sustainability requirements in many building programs and codes:

- **LEED v4**
  - EQ Prerequisite 3: Schools Minimum Acoustic Performance
  - EQ Credit 9: Acoustic Performance

- **Green Guide for Health Care**
  - EQ Credit 9.1: Acoustic Environment

- **2015 International Green Construction Code (IgCC)**
  - Section 3.3: Acoustical Control

- **National Building Code of Canada (NBCC)**
  - Sections 5.9 and 9.11

Review systems performance information to see how SilentFX® QuickCut™ systems can help contribute to these sustainable programs:

NOTES
SilentFX® QuickCut™ can be used as either the base or face layer in a multi-layer system without affecting the STC rating. Equivalent fibreglass insulations may be substituted for CertainTeed Insulation products.
CertainTeed has the unique advantage of offering some of the most comprehensive interior building solutions in the industry.

SilentFX® QuickCut™ noise-reducing acoustical gypsum board with M2Tech® for added moisture and mould resistance.

AirRenew® M2Tech® formaldehyde-absorbing indoor air quality gypsum board with M2Tech® for added moisture and mould resistance.

Extreme Abuse and Extreme Impact provide added durability, with M2Tech® for added moisture and mould resistance.

M2Tech® gypsum board is made with technology specially formulated for enhanced moisture and mould resistance.

The GlasRoc® reinforced glass mat family of products includes Diamondback® Tile Backer for use in moisture-prone spaces.

GlasRoc® Sheathing, Shaftliner and Roof Board provide added moisture and mould resistance, fire resistance and durability. CertainTeed Type X and Type C gypsum boards are standard fire-resistant paper-faced products.

Easi-Lite® lightweight interior gypsum board, as well as other CertainTeed paper-faced gypsum boards, are made of up to 99% recycled paper and are easily recycled after use.
The No-Coat® Structural Laminate Drywall Corner System

Specify NO-COAT®, and guarantee the highest performing drywall corner trim available. The NO-COAT® Structural Laminate (SLAM®) Drywall Corner System represents a revolutionary drywall finishing solution that outperforms all other corners in the market.

NO-COAT® DELIVERS:
• Superior strength and durability
• Faster drywall corner installation
• Bottom line savings in labour and mud compared to traditional corner bead design
• Elimination of costly callbacks and drywall repairs

Whether finishing off-angles, archways, inside or outside corners, NO-COAT® offers a complete drywall corner trim system for every job.

SLAM® Technology
SLAM® Technology integrates three key components providing the durability, flexibility, and strength that won’t crack under pressure:
1. Tapered copolymer core that will not rust, requires less mud and is capable of withstanding severe impacts
2. Joint tape that permanently bonds the corner to drywall with all-purpose joint compound
3. Formulated surface paper that eliminates cracks, chips and peels, accepts any finish and resists abrasion

A RADICAL DEPARTURE FROM CORNER BEAD
For the past 60 years, drywall contractors have reached for corner bead because it has been the only option available—not because it’s the best product.

Recent improvements such as plastic or paper faced metal are still based on a flawed bead design that creates more problems than it solves. Beads are notorious in the industry for causing costly callbacks from denting, chipping, rusting, cracking and peeling. In addition, beads require excessive mud application that costs contractors time and money.
SilentFX® QuickCut™ Noise-Reducing Gypsum Board is manufactured in nominal 13 mm (1/2”) and 16 mm (5/8”) Type X, 1220 mm (4’) width by 2440 mm (8’), 2745 mm (9’), 3050 mm (10’) and 3660 mm (12’) lengths.

The performance of SilentFX® QuickCut™ Noise-Reducing Gypsum Board in actual use may not accurately reproduce these ASTM laboratory test results. Good design and construction practices that prevent exposure of building products to water and moisture are the most effective strategy to avoid mould growth.

* Special lengths or edges may be available as a special order. Please contact your CertainTeed Representative. Standard lengths may differ by region, please contact your sales rep for more information.

** No mould growth detected. Note: 10 is the best possible rating for ASTM D3273.
