Handling

Before commencing with any grid cleaning activity, first remove the ceiling panels in order to prevent their contact with the cleaning solution. Clean cotton gloves should be worn at all times. When panels are removed, they should be stored on a flat surface. Panels should be laid face to face in order to limit unnecessary soiling and damage during their temporary displacement.

Cleaning

Perform the cleaning, as required, with a soft cloth and a mild household cleaning solution (similar in performance to Fantastik® Oxy Power®)

If any portion of this information provokes a question, please do not hesitate to contact CertainTeed Technical Services.
