

Seismic and Hurricane Ties (H2.5)

Attaches and Secures Trusses and Rafters to Building Structure

ClarkDietrich Seismic and Hurricane Ties are designed to provide wind and seismic resistance for trusses and rafters. Quick and efficient, these versatile connectors can also be used for general tie-down purposes, strong back attachments and as all-purpose ties where one member crosses another.

The H2.5 is a twisted strap tie that is used to attach a rafter to the side of the top plate. All connections are shipped in equal quantities of separate rights and lefts.
