

## Precast Concrete Info

This is concrete that is mixed and formed in a factory to make large cladding panels for buildings or structural supports for bridges and parking decks. The precast industry also includes products like: concrete pipe, manholes, utility vaults and specialties like statues, benches, furniture, balustrades, wall-caps, fountains and planters.

We work behind the scenes with Precast companies to provide them with the technical services, color additives and handling systems they need to deliver integrally colored concrete that meets your design requirements.

To Locate a Precast Manufacturer that uses Davis Colors, call us at one of the numbers listed below.
