Sure-Grip High Performance Grout is a non-shrink, non-corrosive, non-metallic cementitious grout designed to provide a controlled, positive expansion and to ensure an excellent bearing area. Sure-Grip High Performance Grout can be mixed in a fluid or flowable consistency.

**USE**
Sure-Grip High Performance Grout is an ideal product for interior or exterior grouting of architectural and structural precast concrete components, structural column base plates, machinery bases, anchoring bolts, cable anchorages, dowels, bearing pads, keyway joints, crane rails or anywhere a high quality engineered grout is required.

**FEATURES**
- High compressive strength quickly – 34.5 MPa in one day
- Less downtime for machines/finish projects sooner
- High ultimate compressive strength – 68.9 MPa in 28 days
- Non-metallic/non corrosive
- High density
- Low water requirements
- High fluidity/pourable/pumpable
- Interior/exterior applications
- Approved by numerous state DOTs

**PROPERTIES**
Corps of Engineers Specification for non-shrink grout: CRD-C 621, Grades A, B and C
ASTM C-1107: Specification for non-shrink grout Grades A, B and C
ASTM C-827: Sure-Grip Grout yielded a controlled positive expansion Expansion (ASTM C-1090):
- 1 day-0-0.3
- 3 days-0.3
- 14 days-0.3
- 28 days-0.3

**STORAGE**
Store in a cool, dry area free from direct sunlight. Shelf life of unopened bags, when stored in a dry facility is 12 months. Excessive temperature differential and/or high humidity can shorten the shelf life expectancy.

**APPLICATION**
**Surface Preparation:**
Thoroughly clean all contact surfaces. Existing concrete should be strong and sound. Surface should be roughened to insure bond. Metal base plates should be clean and free of oil and other contaminants. Maintain contact areas between 7°C and F 32°C before grouting and during curing period. Thoroughly wet concrete contact area 24 hours prior to grouting. Keep wet and remove all surface water just prior to placement. If 24 hours is not possible, then saturate with water for at least 4 hours. Seal forms to prevent water or grout loss. On the placement side, provide an angle in the form high enough to assist in grouting and to maintain head pressure on the grout during the entire grouting process. Forms should be at least 2.5 cm higher than the bottom of the base plate.

**Water Requirements:**
- Water per 20 kg Bag
  - Flowable 2.73 L
  - Fluid 3.35 L

**Mixing:**
A mechanical mixer with rotating blades like a mortar mixer is best. Small quantities can be mixed with a drill and paddle. When mixing less than a full bag, always first agitate the bag thoroughly so that a representative sample is obtained. Place approximately 3/4 of the anticipated mix water into the mixer and add the grout mix, adding the minimum additional water necessary to achieve desired consistency. Mix for a total of five minutes to ensure uniform consistency. For placements greater than 7.6 cm, up to 10 kg of washed 1 cm pea gravel must be added to each 20 kg bag of grout. The approximate working time (pot life) is 30 minutes but will vary with ambient conditions.
For hot weather conditions (greater than 29°C) mix with cold water (approximately 4°C). For cold weather conditions (less than 10°C) mix with warm water (approximately 29°C). For additional hot and cold weather applications, contact Dayton Superior.

Placement:
Grout should be placed preferably from one side using a grout box to avoid entrapped air pockets. Grout should not be over worked which causes segregation. Provide vent holes where necessary. Forms must be sealed to prevent water or grout loss. When possible, grout bolt holes first. Placement and consolidation should be continuous for any one section of the grout. When nearby equipment causes vibration of the grout, such equipment should be shut down for a period of 24 hours (@ 23°C). Forms may be removed when grout is completely selfsupporting. Cut away areas where grout excessively restricts movement of steel, i.e., edges of base plates, etc. For best results, grout should extend downward at a 45° angle from the lower edge of the steel base plates or similar structures.

CLEAN UP
Use clean water. Hardened material will require mechanical removal methods.

CURING
Exposed grout surfaces must be cured. Dayton Superior recommends using a water based curing compound, cure & seal or a wet cure for 3 days. Maintain the temperature of the grout and contact area at 7°C to 32°C for a minimum of 24 hours

LIMITATIONS
FOR PROFESSIONAL USE ONLY
Do not re-temper after initial mixing. Do not add other cements or additives. Setting time for the Sure-Grip High Performance Grout will slow during cooler weather, less than 10°C and speed up during hot weather, greater than 27°C. Prepackaged material segregates while in the bag, thus when mixing less than a full bag it is recommended to first agitate the bag to assure it is blended prior to sampling.

PRECAUTIONS
READ SDS PRIOR TO USING PRODUCT
- Product contains Crystalline Silica and Portland Cement – Avoid breathing dust – Silica may cause serious lung problems
- Use with adequate ventilation
- Wear protective clothing, gloves and eye protection (goggles, safety glasses and/or face shield)
- Keep out of the reach of children
- Do not take internally
- In case of ingestion, seek medical help immediately

- May cause skin irritation upon contact, especially prolonged or repeated. If skin contact occurs, wash immediately with soap and water and seek medical help as needed.
- If eye contact occurs, flush immediately with clean water and seek medical help as needed
- Dispose of waste material in accordance with federal, state and local requirements

WARRANTY
Dayton Superior Corporation ("Dayton") warrants for 12 months from the date of manufacture or for the duration of the published product shelf life, whichever is less, that at the time of shipment by Dayton, the product is free of manufacturing defects and conforms to Dayton’s product properties in force on the date of acceptance by Dayton of the order. Dayton shall not be liable in contract or in tort (including, without limitation, negligence, strict liability or otherwise) for loss of sales, revenues or profits; cost of capital or funds; business interruption or cost of downtime, loss of use, damage to or loss of use of other property (real or personal); failure to realize expected savings; frustration of economic or business expectations; claims by third parties (other than for bodily injury), or economic losses of any kind; or for any special, incidental, indirect, consequential, punitive or exemplary damages arising in any way out of the performance of, or failure to perform, its obligations under any contract for sale of product, even if Dayton could foresee or has been advised of the possibility of such damages. The Parties expressly agree that these limitations on damages are allocations of risk constituting, in part, the consideration for this contract, and also that such limitations shall survive the determination of any court of competent jurisdiction that any remedy provided in these terms or available at law fails of its essential purpose.
