

GENERAL INFORMATION

DOUBLETM

Shield Expansion Anchor

PRODUCT DESCRIPTION

The Double is a dual expansion machine bolt anchor particularly suited for materials of questionable strength or consistence such as stone. It can be used in solid concrete, block, brick, and stone. Job site tests are recommended when used in base materials of questionable strength or consistence.

FEATURE AND BENEFITS

- Performs in base material of questionable strength
- Internally threaded anchor for easy removablility and service work
- Corrosion resistant body

APPROVALS AND LISTINGS

- Tested in accordance with ASTM E488
- Federal GSA Specification Meets descriptive and proof load requirements of CID A-A-1923A, Type 3

GUIDE SPECIFICATIONS

CSI Divisions: 03 16 00 - Concrete Anchors, 04 05 19.16 - Masonry Anchors and 05 05 19 - Post-Installed Concrete Anchors. Expansion anchors shall be Double as supplied by DEWALT, Towson, MD. Anchors shall be installed in accordance with published instructions and the Authority Having Jurisdiction.

Installation Guidelines

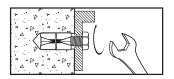

Drill a hole into the base material to the minimum depth required. The tolerances of the drill bit used should meet the requirements of ANSI Standard B212.15. Do not expand the anchor prior to installation. Do not over drill the hole unless the application calls for a subset anchor.

Insert anchor into the hole, threaded cone end first until the outer sleeve is flush with the surface of the base material.

Position fixture, then insert screw or bolt and tighten. For maximum expansion, the upper cone should protrude slightly before setting. The bolt must engage a minimum of 2/3 of the anchor threads.

PERFORMANCE DATA

Ultimate Load Capacities for Double Expansion Anchor in Normal-Weight Concrete^{1,2}

	Minimum		Mi	inimum Concrete Con	npressive Strength (f	(c)	Shear lbs. (kN) 1,335 (6.0)

(19.1)	(88.9)	(27.0)	(49.2)	(36.7)	(60.0)	(51.8)	(65.2)			

- 1. Tabulated load values are for anchors installed in uncracked concrete. Concrete compressive strength must be at the specified minimum at the time of installation.
- 2. Ultimate load capacities must be reduced by a minimum safety factor of 4.0 or greater to determine allowable working load. Consideration of safety factors of 20 or higher may be necessary depending upon the application such as life safety, overhead and in sustained tensile loading applications.

Allowable Load Capacities for Double Expansion Anchor in Normal-Weight Concrete^{1,2,3}

(19.1)	(88.9)	(6.8)	(12.3)	(9.2)	(15.0)	(13.0)	(16.3)		

- 1. Allowable load capacities listed are calculated using and applied safety factor of 4.0. Consideration of safety factors of 20 or higher may be necessary depending upon the application such as life safety, overhead and in sustained tensile loading applications.
- 2. Linear interpolation may be used to determine allowable loads for intermediate compressive strengths.
- 3. The tabulated load values are applicable to single anchors installed at critical edge and spacing distances. Allowable load capacities are multiplied by reduction factors when anchor spacing or edge distances are less than critical distances.

Ultimate and Allowable Load Capacities for Double Expansion Anchor in Hollow Concrete Masonry^{1,2,3}

Rod/Anchor	Minimum Embedment		f'm ≥ 1,500 p	si (10.4 MPa)

(12.7)	(38.1)	(12.2)	(14.1)	(2.4)	(2.8)

- Tabulated load values are for anchors installed in minimum 8-inch wide, minimum Grade N, Type II, lightweight, medium-weight or normal-weight concrete masonry units conforming to ASTM C 90. Mortar must be minimum Type N. Masonry cells may be grouted. Masonry compressive strength must be at the specified minimum at the time of installation (f'm ≥ 1,500 psi).
- 2. Allowable load capacities listed are calculated using and applied safety factor of 5.0. Consideration of safety factors of 20 or higher may be necessary depending upon the application such as life safety, and in sustained tensile loading applications.
- 3. Anchors with diameters of 3/8" and 1/2" installed in hollow concrete masonry units are limited to one anchor per unit cell.

Ultimate and Allowable Load Capacities for Double Expansion Anchor in Clay Brick Masonry^{1,2}

(19.1)	(88.9)	(26.7)	(35.7)	(5.3)	(7.1)

- 1. Tabulated load values are for anchors installed in multiple wythe, minimum Grade SW, solid clay brick masonry walls conforming to ASTM C 62. Mortar must be minimum Type N. Masonry compressive strength must be at the specified minimum at the time of installation (f'm \geq 1,500 psi).
- 2. Allowable load capacities listed are calculated using and applied safety factor of 5.0. Consideration of safety factors of 20 or higher may be necessary depending upon the application such as life safety, and in sustained tensile loading applications.

DESIGN CRITERIA (ALLOWABLE STRESS DESIGN)

Combined Loading

For anchors loaded in both shear and tension, the combination of loads should be proportioned as follows:

$$\left(\frac{Nu}{Nn}\right) + \left(\frac{Vu}{Vn}\right)$$

Where:

 $N_{\text{u}} = \text{Applied Service Tension Load}$ $N_n = Allowable$ Tension Load

V_u = Applied Service Shear Load

 $V_n = Allowable Shear Load$

LOAD ADJUSTMENT FACTORS FOR SPACING AND EDGE DISTANCE

Anchor Installed in Normal-Weight Concrete

Anchor Dimension	Load Type	Critical Distance (Full Anchor Capacity)	Critical Load Factor	Minimum Distance (Reduced Capacity)	Minimum Load Factor
Spacing (s)	Tension and Shear	$s_{cr} = 10d$	$F_{NS} = F_{VS} = 1.0$	$s_{min} = 5d$	$F_{NS} = F_{VS} = 0.50$
Edga Diatanaa (a)	Tension	$c_{cr} = 8d$	F _{NC} = 1.0	$c_{\text{min}} = 5d$	$F_{NC} = 0.80$
Edge Distance (c)	Shear	Ccr = 12d	Fvc = 1.0	$c_{min} = 5d$	Fvc = 0.50

^{1.} Allowable load values found in the performance data tables are multiplied by reduction factors when anchor spacing or edge distances are less than critical distances. Linear interpolation is allowed for intermediate anchor spacing and edge distances between critical and minimum distances. When an anchor is affected by both reduced spacing and edge distance, the spacing and edge reduction factors must be combined (multiplied). Multiple reduction factors for anchor spacing and edge distance may be required depending on the anchor group configuration.
