**RE: Screw-Bolt+™ Anchor Replacement Option for Wedge-Bolt®+ Anchor**

To Whom It May Concern:

The Screw-Bolt+ anchor is now available for consideration as a direct replacement option for Wedge-Bolt+ anchor in concrete and masonry applications. The Wedge-Bolt+ has been discontinued.

The Screw-Bolt+ is a one piece, heavy duty screw anchor with a finished hex head. It is simple to install, easy to identify and fully removable. The patented thread design, designed for use with standard ANSI drill bits, reduces installation torque and enhances productivity. The steel threads along the anchor body tap into the hole during installation to provide keyed engagement and allow for reduced edge and spacing distances. The Screw-Bolt+ finish is available in bright zinc-plated and mechanically galvanized. A mechanically galvanized finish is often required by jurisdictions for attachments of pressure-preserve treated lumber that is in direct contact with concrete and masonry (e.g. sill plate attachments).

In the majority of concrete and masonry anchoring applications, the Screw-Bolt+ anchor has equivalent or higher published load values compared to the Wedge-Bolt+ anchor product. The Screw-Bolt+ has ICC-ES building and residential code approvals for concrete (ESR-3889) and masonry (ESR-4042) as well as regional listings for Florida and the City of LA. The approvals include recognition for both the zinc plated carbon steel anchors and the carbon steel anchors plated with a mechanically galvanized finish.

For additional information, please refer to the Screw-Bolt+ links or download a free copy of the DEWALT anchor software.
