Modified Truss Head Driller - Interior

Steel Framing and Lath to Heavy-Gauge Steel

Description	Attaches steel lath and heavy-gauge steel	i to beavy-gauge steel.
Specifications	Size Gauge: #8 to #12 Length: 1/2 in. to 5 in. Head Type: Modified Truss Head Recess Type: #2 Phillips Thread Type: Fine, Single Lead Finish: Clear Zinc	Quality Assurance: Grabber [®] fasteners are manufactured in ISO 9001 and ISO 14001 certified and approved factories. LEED Reporting: The post-consumer recycled steel content is 25%. Compliance: The fasteners comply with ASTM C954 and C1513 performance requirements. Specific fasteners are listed in ICC ESR-1271; please check the report for listed item numbers.
Applications	 Heavy-gauge steel framing to heavy-gauge steel Heavy-gauge steel studs to door frame jamb anchor clips 	 Heavy-gauge steel studs to track K-lath to heavy-gauge steel
Installation	 Use a standard screw gun with a depth-sensitive nose piece. Suggested screw gun specification for optimal performance: sizes #8 to #12, up to 2,500 RPM. Because of significantly higher torque output, care and caution should be exercised when using an impact driver; otherwise, screw failure or spin-out may occur. 	 The modified truss head is fully seated when the bearing surface is flush with the work surface. The fastener must penetrate beyond the steel three full thread pitches. Overdriving may result in failure of the fastener.
Features	 Modified truss head design provides a larger load-bearing surface for better holding power. Heavier shank ensures entry in clips of hard steel. 	 Self-tapping drill point is designed for penetration into heavy-gauge steel. Consistently formed extra-sharp drill point starts and drills easily into heavy-gauge steel.

Steel Framing and Lath to Heavy-Gauge Steel

Standard Corrosion Test Results

Finish	Test	Standard/Protocol	Results
Clear Zinc	Salt Spray	ASTM B117	12 hrs., no red rust

Note: Salt Spray Testing (SST) results are not intended to predict corrosion in real-world environments. The ASTM B117 standard for SST is recognized industry-wide as an effective tool for comparing different metals and different metal coatings in a tightly controlled, highly corrosive environment for specific periods of time. For more information about corrosion resistance, see the Grabber Guide to Corrosion Resistance for Fasteners.

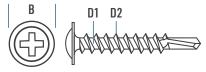

Pull-Out Test Data¹

Screw Gauge	TPI ²	Steel Gauge	Design Thickness	Tension	Shear
		18	0.0451 in.	94 lbs.	244 lbs.
		16	0.0566 in.	171 lbs.	344 lbs.
#8	18	14	0.0713 in.	215 lbs.	486 lbs.
		12	0.1017 in.	307 lbs.	827 lbs.
		10	0.1242 in.	375 lbs.	1,114 lbs.
		18	0.0451 in.	109 lbs.	263 lbs.
		16	0.0566 in.	198 lbs.	370 lbs.
