

Flat Head Streaker® - Interior

Sheathing, Subfloor, and Plywood to Light-Gauge Steel

GRABBER®
CONSTRUCTION PRODUCTS

Description Sheathing, subfloor, and plywood to light-gauge steel.

Specifications

Size | Gauge: #7 to #10
Length: 1 1/2 in. to 2 3/4 in.
Head Type: Flat Head
Recess Type: #2 Phillips, #2 LOX®
Thread Type: Fine, Single Lead
Finish: Clear Zinc, Yellow Zinc

Quality Assurance: Grabber® fasteners are manufactured in ISO 9001 and ISO 14001 certified and approved factories.
LEED Reporting: The post-consumer recycled steel content is 25%.
Compliance: The fasteners comply with ASTM C1513 performance requirements.

Applications

- Plywood or OSB to light-gauge steel runners
- Sheathing to light-gauge steel studs

Installation

- Use a standard screw gun with a depth sensitive nose piece. Suggested screw gun specification for optimal performance: sizes #7 to #10, up to 4,000 RPM.
- The head is fully seated when the top of the head is flush with the work surface.
- The fastener must penetrate beyond the steel three full thread pitches.
- Overdriving may result in failure of the fastener or strip-out.

Features

- Grabber's #2 Phillips is a precision recess designed for better bit engagement, resulting in less wobble or strip-out.
- Grabber's LOX® recess was designed for today's screw guns and for applications where high torque is required. LOX® will not strip out like most other recesses.
- The flat head design provides better holding power in sheathing to light-gauge steel applications.
- Extra-sharp, single lead 23° Streaker® point is designed to penetrate light-gauge steel quickly and easily.
- Plylite's DrawTite shank design lets the screw slide through and engage the steel stud, preventing sheathing ride-up.
- The Unique Tapping Point penetrates through sheathing and through the steel substrate with ease.

Standard Corrosion Test Results

Finish	Test	Standard/Protocol	Results
Clear Zinc	Salt Spray	ASTM B118	12 hrs., no red rust
Yellow Zinc	Salt Spray	ASTM B117	24 hrs., no red rust

Note: Salt Spray Testing (SST) results are not intended to predict corrosion in real-world environments. The ASTM B117 standard for SST is recognized industry-wide as an effective tool for comparing different metals and different metal coatings in a tightly controlled, highly corrosive environment for specific periods of time. For more information about corrosion resistance, see the Grabber Guide to Corrosion Resistance for Fasteners.
