Applications

- Light-gauge steel framing
- Steel studs to door frame jamb anchor clips
- Sheet steel fabrication, HVAC
- Light-gauge steel-to-steel applications

Installation

- Suggested screw gun specification for optimal performance: sizes #7 and #10, up to 4,000 RPM.
- The head is fully seated when the bearing surface is flush with the work surface.
- The fastener must penetrate beyond the steel three full thread pitches.
- Overdriving may result in failure of the fastener or strip-out.

Features

- Grabber's #2 Phillips is a precision recess designed for better bit engagement, resulting in less wobble or strip-out.
- Grabber's LOX® recess was designed for today's screw guns and for applications where high torque is required. LOX® will not strip out like most other recesses.
- Extra-sharp, single lead 23° Streaker® point is designed to penetrate light-gauge steel quickly and easily.
- The super-sharp Vector Point™ starts and drives up to 40% faster than most other fine thread lath and steel framing screws.
- GrabberGard® exterior-grade coating provides additional protection against corrosion in most exterior applications.

Standard Corrosion Test Results

Finish	Test	Standard/Protocol	Results
GrabberGard®	Salt Spray	ASTM B117	1,000 hrs., no red rust

Note: Salt Spray Testing (SST) results are not intended to predict corrosion in real-world environments. The ASTM B117 standard for SST is recognized industry-wide as an effective tool for comparing different metals and different metal coatings in a tightly controlled, highly corrosive environment for specific periods of time. For more information about corrosion resistance, see the Grabber Guide to Corrosion Resistance for Fasteners.
