TEXTURE CHART

Textures are formulated at different solid levels. This chart describes each texture's solids level at an equal viscosity (i.e. thickness). The higher solids level equates to greater stand-out (or more material-heavier texture) on the wall. The lower solids level typically equates to higher mileage (or less stand-out finer texture).

HIGH SOLIDS	Blue Line II, Green Line
MEDIUM SOLIDS	Green Line II
LOW SOLIDS	Blue Line, White Line

CEILING TEXTURES

Ceiling Textures are formulated with the original coarse aggregate at different ratios to solids. The chart describes each texture's aggregate ratio at an equal viscosity (i.e. thickness). The higher aggregate ratio typically equates to heavier texture appearance. The lower aggregate level typically equates to easier application.

HIGH AGGREGATE RATIO	Premium Ceiling - Tex
LOW AGGREGATE RATIO	Hopper - Tex
