

ROOF GARDEN

Sedum Hybrid Panels

Description

CCW's Sedum Hybrid Panel Green Roof system is the best of both worlds; combining the performance of a traditional system with the ease of installation and removal of a tray system. The Sedum Hybrid Panels are simply laid over a protection fabric and locked together with no tools required, giving a seamless installation. Weighing only 12 pounds per square foot fully saturated, Sedum Hybrid Panels can be easily removed, replaced or reconfigured at any time and can be used over a variety of structures.

Features and Benefits

- Arrives on the roof with full vegetative coverage
- Easy to install
- Locks together for a seamless appearance
- Performance as a traditional Green Roof with the convenience of a modular system

Installation

CCW's Sedum Hybrid Panels are hoisted to the rooftop, and placed over CCW 300HV protection fabric that has been overlapped a minimum of 2". Sedum Hybrid Panels are irrigated to the point of saturation immediately after installation. Sedum Hybrid Panels should be irrigated two to three times per week for the first three weeks to establish the root system.

Size and Coverage Rate

- 10.76 square feet per module
- 39" wide by 39" long
- 3" deep hybrid system
- Only 12 lbs/sq. ft. fully saturated
- Minimum 90% vegetative coverage

Plants

CCW's Sedum Hybrid Panels are planted with many different varieties of sedums. Some of the most commonly found varieties include:

- Sedum Acre
- Sedum Album
- Sedum Ellacombianum
- Sedum Reflexum
- Sedum Sexangular
- Sedum Spurius "Dragon's Blood"
- Sedum Pulchellum
