

# STORMTITE®

Stormtite is a synthetic steep slope roof underlayment.

## Synthetic Roof Underlayment

IKO's Stormtite synthetic underlayment is engineered to be used under asphalt shingles and it has qualified as one of IKO's PROFORMAX Integrated Roofing Accessories. It is a cost-effective alternative to traditional #15 asphalt saturated felt. Specifically, Stormtite® is more resistant to tearing and shredding when installers walk on it.

## 5 Safety Information

**CAUTION:** Working at heights on sloped-roof surfaces can be dangerous. Do not install until all appropriate safety precautions are followed. Always wear appropriate personal protective equipment (PPE), including appropriate fall protection equipment.

## 6 Underlayment Installation

Stormtite must be installed according to all of IKO's application instructions. Some select installation requirements are highlighted here:

1. The space beneath the roof deck (i.e., attic) should be thoroughly ventilated to minimum local building code requirements.
2. Ensure a minimum of 4-inch side laps and 6-inch end laps.
3. Attach Stormtite to the roof with roofing nails or staples having one inch diameter plastic/metal caps.
4. In high wind zones or coastal areas, fastening spacing may need to be increased. Consult local building codes.
