

GEO LAP™

ADHESIVE TAPE

GeoLap™ adhesive tape is a solution designed specifically for RhinoMat® and RhinoSkin™ geomembrane applications

- Incorporating high-strength adhesive, extra width and thickness, GeoLap™ tape is designed to be a smart choice for geomembrane patching, repair, and protection.
- Stable from -70° F to 200° F and VOC-free, GeoLap™ is a durable, polymeric-faced all-purpose tape utilizing a proprietary butyl adhesive backing.
- Standard 100-foot length rolls with a 4-inch width make GeoLap™ tape advantageous for secondary repairs, seam protection, pipe boot and penetration sealing, batten reinforcement, and other geomembrane adhesive needs.
- Easy-to-peel paper release liner allows for faster installation with professional-looking results.
- Designed for water retention and containment applications in conjunction with RhinoMat® and RhinoSkin® installations.
- Be sure to stick with caution - once GeoLap™ adhesive tape is applied, it does not come off easily!

Contact your Owens Corning RhinoMat® representative today to find out how to order GeoLap™ tape with your next shipment of geomembrane material.
