- **Respiratory protection:**
Provide ventilation to remove any vapours and fumes released during process.
Avoid breathing in process fumes. These can be irritating to eyes and respiratory tract if no ventilation is provided.
- **Protection of hands:**
The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
- **Material of gloves**
Contact the glove manufacturer for specific advice on glove selection.
Chemical resistant gloves are recommended and if the product is hot, thermally protective, chemical resistant gloves are used.
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
