

LP® SOLIDSTART® ENGINEERED WOOD LSL

Surpasses traditional framing lumber in length, strength and consistency.

- Straighter than traditional lumber
- Allows for taller walls and longer lengths
- Manufactured to a more consistent moisture content, which helps keep it from twisting, warping and shrinking
 - Helps windows and doors to function properly
 - Tile and drywall are less likely to crack
 - Cabinets and countertops are easier to install
 - Less prone to nail pops
- Straighter walls mean less need to scribe or shim cabinetry
- Edges and ends are sealed for additional moisture protection
- New zinc borate treated LP® SolidGuard® LSL now available for sill plates
- All of these advantages add up to fewer callbacks!

BEHIND EVERY GREAT ROOM ARE LP SOLIDSTART LSL STUDS.

LP SolidStart LSL studs are available in:

- 1.35E and 1.55E grades for tall walls
- 1.5" thick and depths to match traditional 2x lumber sizes
- Standard precut lengths up to 10'
- Long lengths available
