The Smart, Simple Way To Build In Energy Savings

With Proven Protection Against Termites And Fungal Decay

LP® TechShield® ZB Radiant Barrier Treated With Zinc Borate is created by laminating a thin layer of aluminum to LP® OSB roof sheathing panels treated with zinc borate, helping to ensure resistance to termite damage and fungal decay. Borate is a naturally occurring mineral that is odorless and colorless in wood. LP TechShield ZB installs like conventional sheathing and requires no special tools or handling. It's a highly effective radiant barrier. Backed by a 20-Year Transferable Limited Warranty, LP TechShield ZB is the ideal choice for built-in energy savings.

Without Radiant Barrier Sheathing

Radiant heat transferred through conventional roof sheathing panels.

With LP® TechShield® ZB Radiant Barrier Sheathing

LP® TechShield® ZB blocks up to 97% of the radiant heat in the panel from entering into the attic.
