Reissued August 2023

Revised August 25, 2023

A Subsidiary of the International Code Council

ICC-ES Evaluation Report ESR-2385

This report is subject to renewal August 2025.

DIVISION: 07 00 00—THERMAL AND MOISTURE

PROTECTION

Section: 07 41 13—Metal Roof Panels

REPORT HOLDER:

METAL SALES MANUFACTURING CORPORATION

EVALUATION SUBJECT:

METAL SALES MANUFACTURING CORPORATION'S STEEL ROOF PANELS

1.0 EVALUATION SCOPE

1.1 Compliance with the following codes:

- 2021, 2018, 2015, 2012 and 2009 International Building Code[®] (IBC)
- 2021, 2018, 2015, 2012 and 2009 International Residential Code® (IRC)

For evaluation for compliance with codes adopted by Los Angeles Department of Building Safety (LADBS), see ESR-2385 LABC and LARC Supplement.

Properties evaluated:

- Weather resistance
- Fire classification
- Structural
- Wind uplift resistance

1.2 Evaluation to the following green code:

■ 2022 California Green Building Standards Code (CALGreen), Title 24, Part 11

Attributes verified:

■ See Section 3.1

2.0 USES

The panels are used as roof coverings over solid or closely fitted decking and spaced supports.

3.0 DESCRIPTION

3.1 General:

The panels and the clips used with the panels are coldformed from steel and/or aluminum conforming to the product specifications, galvalume or zinc coatings, and base-metal thicknesses noted in Tables 1 and 2. See Figures 1 through 13 for panel and clip configurations.

The attributes of the metal roofing panels have been verified as conforming to the provisions of CALGreen Section A5.406.1.2 for reduced maintenance. Note that decisions on compliance for those areas rest with the user of this report. The user is advised of the project-specific provisions that may be contingent upon meeting specific conditions, and the verification of those conditions is outside the scope of this report. These codes or standards often provide supplemental information as guidance.

3.2 Material:

Solid or closely fitted decking must be a minimum of ¹⁵/₃₂-inch-thick (11.9 mm) plywood or lumber sheathing complying with 2021, 2018 and 2015 IBC Section 2304.8.2 [2012 and 2009 IBC Section 2304.7.2] or IRC Section R803, or minimum No. 22 gauge [0.030 inch thick (0.76 mm)] steel complying with IBC Section 2210.1.1.2.

3.3 Underlayment and Flashing:

Underlayment must be in accordance with IBC Section 1507.4.5 or IRC Section R905.10.5, as applicable. Where specified in Table 5, the underlayment is VersaShield® Fire-Resistant Roof Deck Protection (ESR-2053). Flashing must be in accordance with IBC Section 1503.2 or IRC Section R903.2, as applicable.

4.0 DESIGN AND INSTALLATION

4.1 Installation:

Installation of the roof panels and panel clips must be in accordance with this report, IBC Section 1507.4 or IRC Section R905.10, and the manufacturer's published installation instructions. The manufacturer's installation instructions must be available at the jobsite at all times during installation.

The panels must be installed on roofs with a minimum slope as noted in Table 2. Penetrations and terminations of the panels must be flashed and made weathertight in accordance with the manufacturer's published installation instructions and IBC Section 1503.2 or IRC Section R903.2, as applicable.

4.2 Live Loads:

The Magna-Loc, Magna-Loc 180, Clip-Loc, and IC72-Panel, when installed as a three-span condition with spans 5 feet (1.52 m) on center, are capable of withstanding the

minimum uniform distributed live load of 20 psf (0.958 kPa) noted in Table 1607.1 of the IBC, and the minimum concentrated live load of 300 lbf (1.33 kN).

When panels are installed over solid or closely fitted deck sheathing, the capacity is limited to the capacity of the sheathing.

4.3 Wind Uplift Resistance:

The allowable wind uplift pressures of the panels are provided in Table 4.

4.4 Fire Classification:

When installed as specified in Table 5, the steel and aluminum roof panels are components of roof assemblies classified as Class A or B roof assemblies in accordance with ASTM E108 or UL 790.

5.0 CONDITIONS OF USE

The Metal Sales Manufacturing Corporation's roof panels described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

- 5.1 Installation must comply with the applicable code, this report and the manufacturer's published installation instructions. In the event of conflict between this report and the manufacturer's instructions, this report governs.
- 5.2 The metal panels must be installed only by applicators approved by Metal Sales Manufacturing Corporation.
- 5.3 Design wind uplift pressure on any roof area, including edge and corner zones, must not exceed the allowable wind pressure for the system installed in that particular area. Refer to the allowable wind uplift pressure for the metal panels as listed in Table 4.
- 5.4 The allowable wind uplift pressures listed in Table 3 are for the roof covering only. The deck and framing to which the roof covering is attached must be designed for the applicable components and cladding wind loads in accordance with the IBC or IRC, as applicable.

- 5.5 Calculations demonstrating that the required wind resistance is less than the allowable wind resistance must be submitted to the code official.
- **5.6** See Table 1 for panel manufacturing locations. The manufacturing is under a quality-control program with inspections by ICC-ES.

6.0 EVIDENCE SUBMITTED

Data in accordance with the ICC-ES Acceptance Criteria for Metal Roof Coverings (AC166), dated October 2012 (editorially revised January 2018).

7.0 IDENTIFICATION

- 7.1 The ICC-ES mark of conformity, electronic labeling, or the evaluation report number (ICC-ES ESR-2835) along with the name, registered trademark, or registered logo of the report holder must be included in the label.
- 7.2 In addition, the panels are identified with a label bearing the product name, the material type, and the manufacturer's name (Metal Sales Manufacturing Corporation).
- **7.3** The report holder's contact information is the following:

ICC-ES Evaluation Report

ESR-2385 LABC and LARC Supplement

Issued August 2023

Revised August 25, 2023

This report is subject to renewal August 2025.

www.icc-es.org | (800) 423-6587 | (562) 699-0543

A Subsidiary of the International Code Council®

DIVISION: 07 00 00—THERMAL AND MOISTURE PROTECTION

Section: 07 41 13—Metal Roof Panels

REPORT HOLDER:

METAL SALES MANUFACTURING CORPORATION

EVALUATION SUBJECT:

METAL SALES MANUFACTURING CORPORATION'S STEEL ROOF PANELS

1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that Metal Sales Manufacturing Corporation's Steel Roof Panels, described in ICC-ES evaluation report <u>ESR-2385</u>, has/have also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:

- 2023 City of Los Angeles Building Code (LABC)
- 2023 City of Los Angeles Residential Code (LARC)

2.0 CONCLUSIONS

The Metal Sales Manufacturing Corporation's Steel Roof Panels, described in Sections 2.0 through 7.0 of the evaluation report <u>ESR-2385</u>, comply with the LABC Chapter 15, and the LARC Chapter 9, and are subject to the conditions of use described in this supplement.

3.0 CONDITIONS OF USE

The Metal Sales Manufacturing Corporation's Steel Roof Panels described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report <u>ESR-2385</u>.
- The design, installation, conditions of use and identification of the Metal Sales Manufacturing Corporation's Steel Roof Panels are in accordance with the 2021 International Building Code[®] (IBC) provisions noted in the evaluation report ESR-2385.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- The Metal Sales Manufacturing Corporation's Steel Roof Panels must not be installed over existing wood shakes or wood shingles in accordance with LABC Section 1512.
- The installation of the Metal Sales Manufacturing Corporation's Steel Roof Panels must comply with City of Los Angeles Information Bulletin P/BC 2020-16, "Dwellings in High Wind Velocity Areas (HWA)".

This supplement expires concurrently with the evaluation report, reissued August 2023 and revised August 25, 2023.

ICC-ES Evaluation Report

ESR-2385 CBC and CRC Supplement

Reissued August 2023 Revised August 25, 2023

This report is subject to renewal and revised August 2025.

METAL SALES MANUFACTURING CORPORATION'S STEEL ROOF PANELS

1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that Metal Sales Manufacturing Corporation's Steel Roof Panels, described in ICC-ES evaluation report ESR-2385, have also been evaluated for compliance with the codes noted below.

Applicable code editions:

■ 2022 California Building Code (CBC)

For evaluation of applicable Chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) AKA: California Department of Health Care Access and Information (HCAI) and the Division of State Architect (DSA), see Sections 2.1.1 and 2.1.2 below.

■ 2022 California Residential Code (CRC)

2.0 CONCLUSIONS

2.1 CBC:

The Metal Sales Manufacturing Corporation's Steel Roof Panels described in Sections 2.0 through 7.0 of the evaluation report ESR-2385, may be used where the CBC requires a Class A roof covering complying with CBC Section 1505.1.1 or a Class C roof covering complying with CBC Section 1505.1.2, provided the design and installation are in accordance with the 2021 *International Building Code*® (IBC) provisions noted in the evaluation report and the additional requirements of CBC Chapters 16 and 17, as applicable.

- **2.1.1 OSHPD:** The applicable OSHPD Sections and Chapters of the CBC are beyond the scope of this supplement.
- 2.1.2 DSA: The applicable DSA Sections and Chapters of the CBC are beyond the scope of this supplement.

2.2 CRC:

The Metal Sales Manufacturing Corporation's Steel Roof Panels described in Sections 2.0 through 7.0 of the evaluation report ESR-2385, may be used where the CRC requires a Class A roof covering complying with CRC Section R902.1.1 or a Class C roof covering complying with CRC Section R902.1.2, provided the design and installation are in accordance with the 2021 *International Residential Code*® (IRC) provisions noted in the evaluation report and the additional requirements of CRC Section R905.10, as applicable.

This supplement expires concurrently with the evaluation report, reissued August 2023 and revised August 25, 2023.
