

Cam-Lock Self Centering D-Cone Ty

The AR Cam-Lock Self Centering D-Cone Ty features a high density polyethylene Cone Washer. This Cone Washer will not absorb moisture or stick to the concrete, preventing break back problems. A smooth, uniform hole results after break back, allowing easier grouting and faster, better finishing. The standard 25 mm (1") D-Cone comes with a 25 mm (1") break back. Self-centering tapered cones require a drill hole size of 21 mm (13/16").
