

A-Bracket

The AR A-Bracket is used to hold a horizontal waler bar, or a vertical stud with any type of wall form. The built-in slot allows the bracket to slip over 4-3/4" L&W snapties, and can be installed before or after waler bars have been positioned. The swivel bracket allows the snaptie end to lock-in and tightens on the 2 x 4 waler. The swivel bracket allows for 5/8" of adjustment to compensate for lumber variations.
