

FoamSealR™

A good percentage of a structure's heat loss is directly attributed to air infiltration. Use FoamSealR™ ridged sill gasket to fill the gap between the sill plate and foundation wall and prevent a significant part of this loss. As a polyethylene foam, *FoamSealR* is durable and moisture-resistant so it will provide a tight, uniform fit for years to come.

FoamSealR Sill Plate Gasket

- Thickness:** 1/4"
- Width:** 3 1/2", 5 1/2" or 7 1/2"
- Length:** 50'

Installation:

Smooth top surface of foundation wall to no greater variation than 1/4" and brush off loose debris. Unroll *FoamSealR* on top surface of foundation wall or fasten to bottom of sill plate on tilt-up wall sections with ridged side toward roughest surface. Butt all end and perpendicular joints tightly. Pierce *FoamSealR* at anchor bolt locations. Set and anchor sill plate to foundation wall.
