

Medium Temperature Board

INSTALLATION AND DESIGN CONSIDERATIONS

- Insulation is secured using pins and clips with metal mesh.
- For temperatures over 400 degrees F (204 C), good insulation practice suggests double layer application, regardless of insulation type. Single layer installation of any type of insulation material requires good workmanship to minimize heat loss and hot spots at insulation joints. These insulations may be installed in either single or multiple layers at all temperatures up to 1200 F (649 C)
- See specific product application instructions for more detailed considerations.

PRODUCT OPTIONS

- ▶ 700 Series Insulation
- ▶ Fiberglass Insul-Quick Insulation
