

Built-Up Roofing Asphalt

Bigger is better.

At Trumbull, built-up roofing asphalt has been our primary business since 1921. And over the decades we've grown to be one of the world's largest industrial-grade asphalt manufacturers. Our size enables us to invest more than any other company in our industry in things like research and development.

These investments have paid off in real product innovations that address our customers' biggest concerns. Every one of our asphalts meets or exceeds ASTM standards in every category. But in addition to offering standard built-up roofing asphalts for every slope of roof, we've developed an exclusive selection of high-performing, added-value products.

Our TruLo® asphalt features a patented low-fuming technology that creates a skim layer on the kettle to reduce fumes without affecting the asphalt or disrupting kettle operation.

TruMelt® asphalt offers our low fuming technology with an innovative no waste container. The container literally requires no preparation before going into the kettle. Just throw it in and watch it melt completely with no effect on the asphalt.

Exclusive low-fuming technology is only the beginning of the PermaMop® asphalt story. *PermaMop* is specially formulated so that it can be used on any slope. Plus it offers superior weatherability – lasting up to 60% longer than ordinary asphalts.

Less odor. Fewer complaints. Longer lasting. Better for the environment. Trumbull® Asphalt -- always thinking of new and better ways to make asphalt your built-up roofing material of choice.

TruLo®
Low-fuming asphalt

TruMelt®
Low-fuming asphalt
with no-waste packaging

PermaMop®
Low-fuming, superior-performing
all-slope asphalt

Standard Asphalts
Type I-IV
