COMPANY/UNDERTAKING IDENTIFICATION:

| SUPPLIER/MANUFACTURER'S NAME:  | Pecora Corporation  |
| ADDRESS:                      | 165 Wambold Road, Harleysville, PA 19438 |
| EMERGENCY PHONE:              | 800-424-9300 (CHEMTREC, 24-hours) |
| BUSINESS PHONE:               | 215-723-6051 (Mon–Fri, 8 AM–5 PM ET) |
| PREPARATION DATE:             | September 8, 2011 |
| REVISION DATE:                | June 16, 2014 |

This product is sold for commercial use. This MSDS has been developed to address safety concerns of those individuals working with bulk quantities of this material, as well as those of potential users of this product in industrial/occupational settings. ALL United States Occupational Safety and Health Administration Standard (29 CFR 1910.1200), U.S. State equivalent Standards, and Canadian WHMIS [Controlled Products Regulations] and the Global Harmonization Standard required information is included in appropriate sections based on the U.S. ANSI Z400.1-2008 format. This product has been classified in accordance with the hazard criteria of the countries listed above.

2. HAZARD IDENTIFICATION

GLOBAL HARMONIZATION LABELING AND CLASSIFICATION: This product has been classified per GHS Standards.

Classification: Flammable Liquid Cat. 2, Reproductive Toxicty Cat. 2, Acute Oral Toxicity Cat. 5, STOT RE Cat. 2, Skin Irritation Cat. 3, Eye Irritation Cat. 1B, STOT (Inhalation-Central Nervous System, Respiratory Irritation) SE Cat. 3, Skin Sensitization Cat. 1B

Signal Word: Danger

Hazard Statement Codes: H225, H361f d, H303, H373, H316, H336, H335, H317

Hazard Symbols/Pictograms: GHS02, GHS07, GHS08

EMERGENCY OVERVIEW:

Physical Description: This product is a colorless, highly flammable liquid with a sweet, solvent odor.

Health Hazards: DANGER! Highly flammable liquid. This product may cause skin and eye irritation. Harmful or fatal if swallowed. May cause toxic systemic effects by skin absorption. Inhalation will cause adverse central nervous system effects. Contain compound that is a suspect carcinogen and reproductive toxin. Skin contact may cause sensitization and allergic reaction in susceptible individuals.

Flammability Hazard: This product is highly flammable and can ignite if exposed to temperature at or above 12.8°C (55°F) or direct flame.

Reactivity Hazard: This product is not normally reactive. Due to the high level of Methyl Ethyl Ketone, unstable peroxides, such as methyl ethyl ketone peroxide may form following prolonged storage, and in the presence of air.

Environmental Hazard: This product has not been tested for environmental impact. All release to the environment should be avoided.

Hazardous Materials Identification System (HMIS®)

See Section 16 for full text of Ingredient Hazard and Precautionary Statements

### PART II

**What should I do if a hazardous situation occurs?**

### 4. FIRST-AID MEASURES

**PROTECTION OF FIRST AID RESPONDERS:** Rescuers should not attempt to retrieve victims of exposure to this material without adequate personal protective equipment. Rescuers should be taken for medical attention, if necessary. Fire protective gear may be necessary.

**DESCRIPTION OF FIRST AID MEASURES:** Remove victim(s) to fresh air, as quickly as possible. Only trained personnel should administer supplemental oxygen and/or cardio-pulmonary resuscitation, if necessary. Remove and isolate contaminated clothing and shoes. Seek immediate medical attention. Take copy of label and MSDS to physician or other health professional with victim(s).

**INDICATION OF IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT IF NEEDED:** Treat symptoms and blood system conditions or skin problems may be aggravated by overexposure to this product.

**PROTECTION OF FIREFIGHTERS:** Firefighters should be equipped with adequate personal protective equipment and protective clothing. Fire protective gear may be necessary.

**Description of First Aid Measures:**

**Inhalation:** If mists, sprays or fumes of this material are inhaled, remove victim to fresh air. If necessary, use artificial respiration to support vital functions.

**Skin Exposure:** If the material contaminates the skin, immediately begin decontamination with running water. Minimum flushing is for 20 minutes. Do not interrupt flushing. Remove exposed or contaminated clothing, taking care not to contaminate eyes. Victim must seek immediate medical attention.

**Eye Exposure:** If this product enters the eyes, open victim's eyes while under gently running water. Use sufficient force to open eyelids. Have victim "roll" eyes. Minimum flushing is for 20 minutes. Do not interrupt flushing.

**Ingestion:** If this material is swallowed, CALL PHYSICIAN OR POISON CONTROL CENTER FOR MOST CURRENT INFORMATION. DO NOT INDUCE VOMITING, unless directly by medical personnel. Have victim rinse mouth with water or give several cupfuls of water, if conscious. Never induce vomiting or give diluents (milk or water) to someone who is unconscious, having convulsions, or unable to swallow. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration.

**MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:** Acute or chronic respiratory conditions, liver, intestinal, heart, kidney and blood system conditions or skin problems may be aggravated by overexposure to this product.

**INDICATION OF IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT IF NEEDED:** Treat symptoms and eliminate overexposure. Be observant for pulmonary edema. The following describes treatment recommendations available for Toluene.

Check for signs of impending pulmonary edema. Because of the aspiration hazard, avoid emetic drugs, whenever practical. For ingestion over-exposures in which Toluene contains another toxic component and induction of emesis is advisable: If the patient is not drowsy, comatose, or in respiratory difficulty, induce vomiting. If necessary, as an alternative treatment, remove Toluene from the stomach via gastric lavage. One or two ounces of mineral oil may be instilled and left to act as a lubricant. The patient should be given an emetic syrup to cause vomiting. Induction of emesis is advisable: If the patient is not drowsy, comatose, or in respiratory difficulty, induce vomiting. Never induce vomiting or give diluents (milk or water) to someone who is unconscious, having convulsions, or unable to swallow. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration.

**MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:** Acute or chronic respiratory conditions, liver, intestinal, heart, kidney and blood system conditions or skin problems may be aggravated by overexposure to this product.

**INDICATION OF IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT IF NEEDED:** Treat symptoms and eliminate overexposure. Be observant for pulmonary edema. The following describes treatment recommendations available for Toluene.

Check for signs of impending pulmonary edema. Because of the aspiration hazard, avoid emetic drugs, whenever practical. For ingestion over-exposures in which Toluene contains another toxic component and induction of emesis is advisable: If the patient is not drowsy, comatose, or in respiratory difficulty, induce vomiting. If necessary, as an alternative treatment, remove Toluene from the stomach via gastric lavage. One or two ounces of mineral oil may be instilled and left to act as a lubricant. The patient should be given an emetic syrup to cause vomiting. Induction of emesis is advisable: If the patient is not drowsy, comatose, or in respiratory difficulty, induce vomiting. Never induce vomiting or give diluents (milk or water) to someone who is unconscious, having convulsions, or unable to swallow. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration.

**MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:** Acute or chronic respiratory conditions, liver, intestinal, heart, kidney and blood system conditions or skin problems may be aggravated by overexposure to this product.

**INDICATION OF IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT IF NEEDED:** Treat symptoms and eliminate overexposure. Be observant for pulmonary edema. The following describes treatment recommendations available for Toluene.

Check for signs of impending pulmonary edema. Because of the aspiration hazard, avoid emetic drugs, whenever practical. For ingestion over-exposures in which Toluene contains another toxic component and induction of emesis is advisable: If the patient is not drowsy, comatose, or in respiratory difficulty, induce vomiting. If necessary, as an alternative treatment, remove Toluene from the stomach via gastric lavage. One or two ounces of mineral oil may be instilled and left to act as a lubricant. The patient should be given an emetic syrup to cause vomiting. Induction of emesis is advisable: If the patient is not drowsy, comatose, or in respiratory difficulty, induce vomiting. Never induce vomiting or give diluents (milk or water) to someone who is unconscious, having convulsions, or unable to swallow. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration.

**MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:** Acute or chronic respiratory conditions, liver, intestinal, heart, kidney and blood system conditions or skin problems may be aggravated by overexposure to this product.

### 5. FIRE-FIGHTING MEASURES

**FLASH POINT (closed cup):** -3°C (26.6°F)

**AUTOIGNITION:** Not known for product.

For Toluene: 480°C (896°F); For 2-Butanone: 404°C (759°F)

**FLAMMABLE LIMITS IN AIR:** Not known for product.

For Toluene: LEL: 1.1%,UEL: 7.1%; For 2-Butanone: LEL: 1.4%, UEL: 11.4%

**EXTINGUISHING MEDIA:**

**Suitable Extinguishing Media:** Use materials appropriate for surrounding materials. Water should be used for cooling of containers only due to formation of highly flammable dimethyline. Halons should not be used due to potential reaction with decomposition product, dimethyline.

**Unsuitable Extinguishing Media:** Water and halogenated media.

**PROTECTION OF FIREFIGHTERS:**

**Special Hazards Arising From the Product:** This is a highly flammable liquid which is also corrosive and so presents a contact hazard to fire-fighters. Not sensitive to mechanical impact under normal conditions. Vapors may form explosive mixtures in air. Vapors are heavier than air and can accumulate in confined spaces creating a toxicity and explosion hazard. Vapors can travel long distances and flashback to ignition source. Closed containers may develop pressure and rupture in event of fire or if contaminated with water.
5. FIRE-FIGHTING MEASURES (Continued)

PROTECTION OF FIREFIGHTERS (continued):

Special Protective Actions for Fire-Fighters: Incipient fire responders should wear eye protection. Structural firefighters must wear Self-Contained Breathing Apparatus and full protective equipment. Move containers from fire area if it can be done without risk to personnel. If possible, prevent runoff water from entering storm drains, bodies of water, or other environmentally sensitive areas.

6. ACCIDENTAL RELEASE MEASURES

PERSONAL PRECAUTIONS AND EMERGENCY PROCEDURES: An accidental release can result in a fire. Uncontrolled releases should be responded to by trained personnel using pre-planned procedures. Proper protective equipment should be used. Eliminate any possible sources of ignition, and provide maximum explosion-proof ventilation. Use only non-sparking tools and equipment during the response. The atmosphere must at least 19.5 percent Oxygen before non-emergency personnel can be allowed in the area without Self-Contained Breathing Apparatus and fire protection. Avoid contact with water.

PERSONAL PROTECTIVE EQUIPMENT: Responders should wear the level of protection appropriate to the type of chemical released, the amount of the material spilled, and the location where the incident has occurred.

Small Spills: For releases of 1 drum or less, Level D Protective Equipment (gloves, chemical resistant apron, boots, and eye protection) should be worn.

Large Spills: Minimum Personal Protective Equipment should be rubber gloves, rubber boots, face shield, and Tyvek suit. Minimum level of personal protective equipment for releases in which the level of oxygen is less than 19.5% or is unknown must be Level B: triple-gloves (rubber gloves and nitrile gloves over latex gloves), chemical resistant suit, fire-retardant clothing and boots, hard hat, and Self-Contained Breathing Apparatus.

METHODS FOR CLEAN-UP AND CONTAINMENT:

All Spills: Access to the spill area should be restricted. Spread should be limited by gently covering the spill with polyponds. Absorb spilled liquid with clay, sand, polyponds or other suitable inert absorbent materials. All contaminated absorbents and other materials should be placed in an appropriate container and seal. Do not mix with wastes from other materials. Dispose of in accordance with applicable Federal, State, and local procedures (see Section 13, Disposal Considerations). Dispose of recovered material and report spill per regulatory requirements. Remove all residue before decontamination of spill area. Clean spill area with soap and copious amounts of water. Monitor area for combustible vapor levels and confirm levels are below exposure limits given in Section 8 (Exposure Controls-Personal Protection), if applicable, and that levels are below applicable LEVs (see Section 5 – Fire Fighting Measures) before non-response personnel are allowed into the spill area. Purge equipment with inert gas prior to reuse.

ENVIRONMENTAL PRECAUTIONS: Minimize use of water to prevent environmental contamination. Prevent spill or rinsate from contaminating storm drains, sewers, soil or groundwater. Place all spill residues in a suitable container and seal. Do not discharge effluent containing this product into streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA.

OTHER INFORMATION: U.S. regulations may require reporting of spills of this material that reach surface waters if a sheen is formed. If necessary, the toll-free phone number for the US Coast Guard National Response Center is 1-800-424-8802.

REFERENCE TO OTHER SECTIONS: See information in Section 8 (Exposure Controls – Personal Protection) and Section 13 (Disposal Considerations) for additional information.

PART III

How can I prevent hazardous situations from occurring?

7. HANDLING and STORAGE

PRECAUTIONS FOR SAFE HANDLING: As with all chemicals, avoid getting this product ON YOU or IN YOU. Wash thoroughly after handling this product. Do not eat or drink while handling this material. Avoid contact with eyes, skin, and clothing. Avoid breathing fumes, dusts, vapors or mist. Do not taste or swallow. Use only with adequate ventilation. Contaminated clothing needs to be laundered prior to reuse. Keep away from heat and flame. In the event of a spill, follow practices indicated in Section 6: ACCIDENTAL RELEASE MEASURES.

CONDITIONS FOR SAFE STORAGE: Keep container tightly closed when not in use. Store containers in a cool, dry location, away from direct sunlight, sources of intense heat, or where freezing is possible. Material should be stored in secondary containers or in a diked area, as appropriate. Inspect all incoming containers before storage, to ensure containers are properly labeled and not damaged. Containers should be separated from oxidizing materials by a minimum distance of 20 ft. or by a barrier of non-combustible material at least 5 ft. high having a fire-resistance rating of at least 0.5 hours. Storage areas should be made of fire resistant materials. Local Fire Departments should be notified of the storage of this product on site. Storage and processing areas of this product should be identified with a NFPA 704 placard (diamond) large enough to be seen from a distance. Post warning and “NO SMOKING” signs in storage and use areas, as appropriate. Refer to NFPA 30, Flammable and Combustible Liquids Code, for additional information on storage. Have appropriate extinguishing equipment in the storage area (such as sprinkler systems or portable fire extinguishers). Inspect all incoming containers before storage to ensure containers are properly labeled and not damaged. Empty containers may contain residual product; therefore, empty containers should be handled with care.

PRODUCT USE: This product is used as a primer. Follow all industry standards for use of this product.

8. EXPOSURE CONTROLS - PERSONAL PROTECTION

EXPOSURE LIMITS/CONTROL PARAMETERS:

Ventilation and Engineering Controls: Use with adequate, explosion proof ventilation to ensure exposure levels are maintained below the limits provided further in this section.
8. EXPOSURE CONTROLS - PERSONAL PROTECTION (Continued)

NE = Not Established. See Section 16 for Definitions of Terms Used.

PERSONAL PROTECTIVE EQUIPMENT (PPE): The following information on appropriate Personal Protective Equipment is provided to assist employers in complying with OSHA regulations found in 29 CFR Subpart I (beginning at 1910.132, including the Respiratory Standard Z94.4-93-02, the CSA Eye Protection Standard Z94.3-M1982, Canadian CSA Foot Protection Standard Z195-M1984, Protective Footwear). Please reference applicable regulations and standards for relevant details.

**Eye/Face Protection:** Use approved safety glasses or safety glasses. If necessary, refer to appropriate regulations.

**Skin Protection:** Wear chemical impervious gloves (e.g., Nitrile or Neoprene). Use triple gloves for spill response. If necessary, refer to appropriate regulations.

**Body Protection:** Use body protection appropriate for task (e.g., lab coat, coveralls, Tyvek suit). If necessary, refer to the OSHA Technical Manual (Section VII: Personal Protective Equipment) or appropriate Standards of Canada. If a hazard of injury to the feet exists due to falling objects, rolling objects, where objects may pierce the soles of the feet or where employee’s feet may be exposed to electrical hazards, use foot protection, as described in appropriate regulations.

**Respiratory Protection:** If vapors or fumes from this product are created during use, use appropriate respiratory protection. If necessary, use only respiratory protection authorized in appropriate regulations. Oxygen levels below 19.5% are considered IDLH by OSHA. In such atmospheres, use of a full-facepiece pressure/demand SCBA or a full facepiece, supplied air respirator with auxiliary self-contained air supply is required under appropriate regulations. The following are NIOSH respiratory equipment guidelines are presented for additional assistance in respiratory protective equipment selection.

**2-BUTANONE**

- **CONCENTRATION**
- **RESPIRATORY PROTECTION**
- Up to 3000 ppm: Any SAR operated in a continuous-flow mode, any PAPR with organic vapor cartridge(s), any chemical cartridge respirator with a full facepiece and organic vapor cartridge(s), any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister, any SCBA with a full facepiece, or any SAR with a full facepiece. (continued on next page)

Emergency or Planned Entry into Unknown Concentrations or IDLH Conditions: Any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode or any SAR that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in pressure-demand or other positive-pressure mode.

- **Escape:** Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister, or any appropriate escape-type, SCBA.

**DIPROPYLENE GLYCOL MONOMETHYL ETHER:**

- **CONCENTRATION**
- **RESPIRATORY PROTECTION**
- Up to 600 ppm: Any Supplied-Air Respirator (SAR) or any Self-Contained Breathing Apparatus (SCBA) with a full facepiece.

Emergency or Planned Entry into Unknown Concentrations or IDLH Conditions: Any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode, or any SAR that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in pressure-demand or other positive-pressure mode.

- **Escape:** Any Air-Purifying, Full-Facepiece Respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister, or any Supplied-Air Respirator (SAR), or any Self-Contained Breathing Apparatus (SCBA) with a full facepiece.

**TOLUENE**

- **CONCENTRATION**
- **RESPIRATORY PROTECTION**
- Up to 500 ppm: Any Chemical Cartridge Respirator with organic vapor cartridge(s), or any Powered, Air-Purifying Respirator (PAPR) with organic vapor cartridge(s), or any Air-Purifying, Full-Facepiece Respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister, or any Supplied-Air Respirator (SAR), or any Self-Contained Breathing Apparatus (SCBA) with a full facepiece.
8. EXPOSURE CONTROLS - PERSONAL PROTECTION (Continued)

PERSONAL PROTECTIVE EQUIPMENT (continued):

Respiratory Protection (continued):

TOLUENE (continued)

CONCENTRATION  RESPIRATORY PROTECTION
Emergency or Planned entry into Unknown concentrations or IDLH Conditions: Any SCBA that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode, or any SAR that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary SCBA operated in pressure-demand or other positive-pressure mode.

Escape: Any Air-Purifying, Full-Facepiece Respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister, or any appropriate escape-type, SCBA.

9. PHYSICAL and CHEMICAL PROPERTIES

FORM: Liquid.
MOLECULAR WEIGHT: Mixture.
ODOR: Aromatic.
VAPOR DENSITY: (air = 1) = Not available.
FREEZING/MELTING POINT: Not available.
SPECIFIC GRAVITY @ 25°C (water = 1): 0.87
SOLUBILITY IN WATER: Not available.
VAPOR PRESSURE: Not available.
COEFFICIENT WATER/OIL DISTRIBUTION: Not available.
VOC (LESS WATER AND EXEMPT): <599 g/L
HOW TO DETECT THIS SUBSTANCE (WARNING PROPERTIES): The appearance and odor of this product may act as warning properties in the event of an accidental release.

10. STABILITY and REACTIVITY

CHEMICAL STABILITY: Stable under normal circumstances of use and handling. Due to the high level of Methyl Ethyl Ketone, unstable peroxides, such as methyl ethyl ketone peroxide may form following prolonged storage, and in the presence of air.

CONDITIONS TO AVOID: Avoid contact with incompatible chemicals and exposure to extreme temperatures.

INCOMPATIBLE MATERIALS: This product is not compatible with oxidizers, strong oxidizing agents, hydrogen peroxide or mixtures of hydrogen peroxide, solid potassium t-butoxide, 2-propanol, strong acids. Water, moisture, or humid air can cause hazardous vapors to form. Due to the high level of Methyl ethyl ketone, this product may attack plastics.

HAZARDOUS DECOMPOSITION PRODUCTS: Combustion: Thermal decomposition of this product can generate carbon, nitrogen and silicon oxides, hydrogen peroxide, aldehydes (formaldehyde, acetaldehyde and propionaldehyde), alcohols (methanol and ethanol), ketones (acetone, methyl vinyl ketone, diethyl ketone), vinyl acetate, methane, ethane and ethylene. Hydrolysis: None known.

POSSIBILITY OF HAZARDOUS POLYMERIZATION/REACTIONS: This product is not expected to undergo hazardous polymerization, decomposition, condensation or self-reactivity.

PART IV Is there any other useful information about this material?

11. TOXICOLOGICAL INFORMATION

POTENTIAL HEALTH EFFECTS: The most significant routes of occupational overexposure are inhalation and contact with skin and eyes. The symptoms of overexposure to this product are as follows:

Contact with Skin or Eyes: Depending on the duration of skin contact, skin exposures can cause reddening, discomfort or irritation. Repeated skin exposure to low concentration can cause dermatitis. Brief contact with the liquid or vapors from this product and the eyes can cause irritation, reddening, watering and vision disturbances. Skin contact may cause sensitization and allergic reaction.

Skin Absorption: Prolonged skin contact may cause adverse systemic toxicity by skin absorption as described under ingestion or inhalation.

Inhalation: Inhalation of vapors, mists, or sprays of this product can moderately to can irritate the mouth, throat, and other tissues of the gastro-intestinal system and may cause nausea, vomiting, and diarrhea as well as adverse effects on the central nervous system. Symptoms can include dizziness, vomiting and incoordination. Inhalation of large amounts may be harmful and cause systemic toxicity. Aspiration into the lungs after ingestion can pose a serious hazard of chemical and pulmonary edema. Ingestion of large amount may be fatal.

Ingestion: If the product is swallowed, it can irritate the mouth, throat, and other tissues of the gastro-intestinal system and may cause nausea, vomiting, and diarrhea as well as adverse effects on the central nervous system. Symptoms can include dizziness, vomiting and incoordination. Ingestion of large amounts may be harmful and cause systemic toxicity. Aspiration into the lungs after ingestion can pose a serious hazard of chemical and pulmonary edema. Ingestion of large amount may be fatal.

METHYL ETHYL KETONE

CONCENTRATION  SYMPTOM OF EXPOSURE
100 ppm: Brief (3–5 minute) exposure produced slight nose and throat irritation. Minor disturbances in time perception.
200 ppm: 4 hour exposure causes throat irritation, unpleasant odor, nausea, and headache (in order of frequency reported) as well as adverse neurobehavorial effects. This level is expected to cause central nervous system depression with symptoms such as headache, nausea, dizziness, drowsiness, and confusion.
350 ppm: Brief (3–5 minute) exposure produced definite nose and throat irritation.

TOLUENE

CONCENTRATION  SYMPTOM OF EXPOSURE
~50 ppm: Slight drowsiness and headache.
50-100 ppm: Irritation of the nose, throat and respiratory tract.
Above 100 ppm: Fatigue and dizziness.
11. TOXICOLOGICAL INFORMATION (Continued)

POTENTIAL HEALTH EFFECTS (continued):

Inhalation (continued):

TOLUENE (continued):

CONCENTRATION   SYMPTOM OF EXPOSURE

Over 200 ppm: Symptoms similar to drunkenness, giddiness, numbness, and mild nausea.
Over 500 ppm: Mental confusion and in-coordination, loss of appetite, a bad taste.
10,000 ppm (est.): At this concentration Toluene causes visual disturbances and further depression of the central nervous system which can result in unconsciousness and death.

Injection: Accidental injection of this product (e.g. puncture with a contaminated object) may cause burning, redness, and swelling in addition to the wound.

Target Organs: Acute: Skin, eyes, respiratory system. Chronic: Skin, respiratory and central nervous systems.

TOXICITY DATA: There are currently no toxicity data available for this product; the following toxicology data are available for components greater than 1% in concentration. Due to the large amount of data, only human data, LD50 Oral-Rat or Mouse, LD50 Skin-Rat or Mouse, LC50 Inhalation-Rat or Mouse and skin irritation data are provided in this SDS. Contact Pecora for more information.

2-BUTANONE:
- Standard Draize Test (Eye-Human) 350 ppm
- Standard Draize Test (Skin-Rabbit, adult) 500 mg/24 hours: Moderate irritation effects
- Standard Draize Test (Skin-Rabbit, adult) 402 mg/24 hours: Mild irritation effects
- Standard Draize Test (Skin-Rabbit, adult) 11,780 mg/24 hours open: Mild irritation effects
- Standard Draize Test (Eye-effects-Rabbit, adult) 80 mg
- LD50 (Oral-Rat) 2737 mg/kg
- LD50 (Oral-Mouse) 4050 mg/kg
- LD50 (Skin-Rabbit, adult) 6450 mg/kg
- LC50 (Inhalation-Rat) 23,500 mg/m³/8 hours

DIPROPYLENE GLYCOL MONOMETHYL ETHER:
- Standard Draize Test (Eye-Human) 8 mg: Mild
- Standard Draize Test (Eye-Rabbit) 500 mg/24 hours: Mild
- Open Irritation Test (Skin-Rabbit) 500 mg: Mild
- LD50 (Oral-Rat) 5,400 µL/kg
- LD50 (Oral-Rat) 5,5 mL/kg

CARCINOGENIC POTENTIAL: The following table summarizes the carcinogenicity listing for the components of this product. “NO” indicates that the substance is not considered to be or suspected to be a carcinogen by the listed agency, see section 16 for definitions of other ratings.

IARC-3: Unclassifiable as to Carcinogenicity in Humans. EPA-I (Data are Inadequate for an Assessment of Human Carcinogen Potential); EPA-II (Inadequate Information to Assess Carcinogenic Potential). ACGIH TLV-A3 (Confirmed Animal Carcinogen with Unknown Relevance to Humans). ACGIH TLV-A4: Not Classifiable as a Human Carcinogen. (NIC = Notice of Intended Change)

IRRITANCY OF PRODUCT: This product is irritating by all routes of exposure.

SENSITIZATION TO THE PRODUCT: This product may cause skin sensitivity and allergic reaction in susceptible individuals. Symptoms can include itching, redness, swelling, welts and rash.

TOXICOLOGICAL SYNERGISTIC PRODUCTS: Combined exposure to toluene and noise, Toluene and n-hexane, Toluene and aspirin or toluene, ethyl benzene and noise has caused a synergistic loss of hearing in animal studies. Increased hearing loss has also been observed in workers in some studies following long-term exposure to Toluene and noise. A major effect of 2-Butanone is its enhancement of the toxicity of other chemicals. There are several human case reports of neurological effects resulting from high exposure to methyl ethyl ketone in combination with other solvents. Animal studies have confirmed synergism between methyl ethyl ketone and ethyl n-butyl ketone, methyl n-butyl ketone, n-hexane, carbon tetrachloride, 2,5-hexanedione and chloroform. Principal target organs involved in the toxicological interactions are the nervous system, liver, kidneys and lungs.

REPRODUCTIVE TOXICITY INFORMATION: This product has not been tested for reproductive toxicity. The following information is available for some components.

Mutagenicity: Both positive and negative results have been obtained in studies for various mutagenic effects in peripheral blood lymphocytes of workers exposed to Toluene; mutagenicity cannot be determined.

Embryotoxicity/Teratogenicity: Toluene is a developmental toxicity hazard, based on information obtained from animal studies. Fetotoxicity (reduced fetal weight), behavioral effects (effects on learning and memory) and hearing loss (in males) have been observed in the offspring of rats exposed by inhalation to 1200 or 1800 ppm toluene. These effects were observed in the absence of maternal toxicity.

Reproductive Toxicity: No information is available.

BIOLICAL EXPOSURES INDICES (BEIs): Currently, the following BEI’s have been established for the Toluene component.

12. ECOLOGICAL INFORMATION

MOBILITY: This product has not been tested for mobility in soil. The following information is available for some components.

2-BUTANONE: Measured Koc values of 29 and 34 were obtained for this compound in silt loams. Based on a recommended classification scheme, this material is expected to have very high mobility in soil.

DIPROPYLENE GLYCOL MONOMETHYL ETHER: The high water solubility of Dipropylene Glycol Monomethyl Ether suggests that it will not sorb to soils or sediments and, therefore, would be expected to leach through soil.

TOLUENE: In association with clay minerals, Toluene's adsorption is inversely proportional to the pH of the soil. The reported Kocs are 178 in a sandy soil and as 37 (Wendover silty loam), 160 (Grimsby silt loam), 160 (Vanadreil sandy loam) and 46 (sandy soil), 166 in lake sediment. According to a classification scheme, this Koc data suggests that Toluene is expected to have high to moderate mobility in soil. Also, based on a classification scheme, Koc values of 37-178 measured in soil indicates that Toluene is expected to have high to moderate mobility in soil.

PERSISTENCE AND BIODEGRADABILITY: This product has not been tested for persistence or biodegradability. The following information is available for some components.

2-BUTANONE: Based on an experimental vapor pressure of 91 mm Hg at 25°C, this compound is expected to exist solely as a vapor in the ambient atmosphere. Vapor-phase material is degraded in the atmosphere by reaction with photochemically-produced hydroxyl radicals with an estimated atmospheric half-life of about 14 days. This compound is also expected to undergo photolysis in the atmosphere by natural sunlight. Photocatalytic degradation of this compound by natural sunlight is expected to occur at approximately 1/5 the rate of degradation by photochemically produced hydroxyl radicals. This material is expected to have very high mobility in soils based upon measured Koc values of 29 and 34 obtained in silt loams. Volatilization from dry soil surfaces is expected based upon the vapor pressure of this compound. Volatilization from moist soil surfaces is also expected based upon the measured Henry's Law constant of 4.7X10^-5 atm-cu m/mole. The volatilization half-life of this compound from silt and sandy loams was measured as 4.9 days. This compound is expected to biodegrade under aerobic and anaerobic conditions. In water, this material is not expected to adsorb to suspended solids or sediment based upon its measured Koc values. Volatilization from water surfaces is expected to be an important environmental fate process given its Henry's Law constant. Estimated half-lives for a model river and model lake are 19 and 197 hours, respectively.

DIPROPYLENE GLYCOL MONOMETHYL ETHER: Because of its high solubility and low vapor pressure, Dipropylene Glycol Monomethyl Ether would not be expected to sorb to sediments or to bioconcentrate. The main degradation mechanism in water is, in all likelihood, biodegradation, while photolysis and hydrolysis are probably insignificant. Evaporative transfer from water to the atmosphere is expected to be minimal. However, Dipropylene Glycol Monomethyl Ether in the atmosphere is estimated to have a half-life of approximately 3.4 hours. Besides photochemical reactions, Dipropylene Glycol Monomethyl Ether may be removed from the atmosphere by washout. In soil, Dipropylene Glycol Monomethyl Ether will be highly mobile, and hence, leach to groundwater. In moist soil, as in aquatic systems, biodegradation will probably be the primary removal mechanism. However, Dipropylene Glycol Monomethyl Ether which is on the surface of dry soil may evaporate.

TOLUENE: Volatilization of Toluene from moist soil surfaces is expected to be an important fate process given Toluene's Henry's Law constant of 6.64X10^-3 atm-cu m/mole. This compound may volatilize from dry soil surfaces based on a vapor pressure of 28.4 mm Hg at 25°C. Complete biodegradation of Toluene was observed in lab microcosm tests during a 40 hour incubation period using soils previously exposed to this material. The biodegradation half-life in various soils was reported as 7 to 9 days. Volatilization from water surfaces is expected based upon a Henry's Law constant of 6.6X10^-3 atm-cu m/mole. Using this Henry's Law constant and an estimation method, volatilization half-lives for a model river and model lake are 1 hour and 4 days, respectively. The half-life of Toluene in this material in aerobic and anaerobic water was reported as 4 and 56 days, respectively. According to a model of gas/particle partitioning of semi-volatile organic compounds in the atmosphere, Toluene, which has a vapor pressure of 28.4 mm Hg at 25°C, is expected to exist solely as a vapor in the ambient atmosphere. Vapor-phase material is degraded in the atmosphere by reaction with photochemically-produced hydroxyl radicals, nitrate radicals and ozone molecules. The half-life for the reaction with hydroxyl radicals is estimated to be 3 days, calculated from its rate constant of 5.96X10^-12 cm^2/molecule-sec at 25°C. The half-life for the nighttime reaction with nitrate radicals is estimated as 491 days calculated from its rate constant of 6.8X10^-17 cm/molecule-sec at 25°C.

BIO-ACCUMULATION POTENTIAL: This product has not been tested for bio-accumulation potential. The BCf's of the Toluene component in eels is 13 and in golden ide 90. The estimated BCf for 2-Butanone is 1. These values indicate low bioconcentration potential.

ECOTOXICITY: This product has not been tested for aquatic or animal toxicity. All release to terrestrial, atmospheric and aquatic environments should be avoided. The following aquatic toxicity data are available for the Toluene component. Only select data are given due to the large amount of data available. Please contact Pecora for more information.

Environmental exposure controls: Controls should be engineered to prevent release to the environment, including procedures to prevent spills, atmospheric release and release to waterways.

13. DISPOSAL CONSIDERATIONS

PREPARING WASTES FOR DISPOSAL: As supplied, this product would be a hazardous waste as defined by U.S. federal regulations (40 CFR 261) if discarded or disposed. It has the characteristic of Ignitibility. State and local regulations may differ from federal regulations. The generator of the waste is responsible for proper waste determination and management.

U.S. EPA WASTE NUMBER: D001.

14. TRANSPORTATION INFORMATION

U.S. DEPARTMENT OF TRANSPORTATION: This product is classified as Dangerous Goods, per U.S. DOT regulations, under 49 CFR 172.101. UN Identification Number: UN 1866

Resin solution, flammable

Proper Shipping Name: 3 (Flammable)

Packing Group: PG II

DOT Label(s) Required: Class 3 (Flammable)

North American Emergency Response Guidebook Number (2012): 127 Marine Pollutant: This material is not classified by the DOT as a Marine Pollutant (as defined by 49 CFR 172.101.)

TRANSPORT CANADA TRANSPORTATION OF DANGEROUS GOODS REGULATIONS: This product is classified as Dangerous Goods, per regulations of Transport Canada.

UN Identification Number: UN 11866

Resin solution, flammable

Proper Shipping Name:
14. TRANSPORTATION INFORMATION (Continued)

U.S. SARA Hazard Categories (Section 311/312, 40 CFR 370-21): ACUTE: Yes; CHRONIC: Yes; FIRE: Yes; REACTIVE: No; SUDDEN RELEASE: No

U.S. TSCA Inventory Status: All components of this product are in compliance with the inventory listing requirements of the U.S. Toxic Substances Control Act (TSCA) Chemical Substance Inventory.

U.S. CERCLA Reportable Quantity (RQ): 2-Butanone = 5000 lb (2270 kg); Toluene = 1000 lb (454 kg). The Dipropylene Glycol Monomethyl Ether component is a CERCLA Hazardous Substance under the general Glycol Ether category, although no specific Reportable Quantity has been designated.

U.S. Clean Air Act (CA 112r) Threshold Quantity (TQ): The 2-Butanone component is listed as a Hazardous Air Pollutant (HAP) and is subject to requirements under the Clean Air Act.

U.S. Federal Water Pollution Control Act: Toluene is listed as a Toxic Pollutant Designated pursuant to section 307(a)(1) of the Federal Water Pollution Control Act and is subject to effluent limitations. Toluene is designated as a hazardous substance under section 311(b)(2)(A) of the Federal Water Pollution Control Act and further regulated by the Clean Water Act Amendments of 1977 and 1978. These regulations apply to discharges of this substance. This designation includes any isomers and hydrates, as well as any solutions and mixtures containing this substance.

California Safe Drinking Water and Toxic Enforcement Act (Proposition 65): The Toluene component is on the California Proposition 65 lists.

WARNING: This product contains a chemical known to the State of California to cause developmental harm.
ADDITIONAL CANADIAN REGULATIONS:

Canadian DSL/NDSL Inventory Status: The components of this product are on the DSL Inventory.

Canadian Environmental Protection Act (CEPA) Priorities Substances Lists: The 2-Butanone component is Substances with Greatest Potential For Human Exposure Substances on Environment Canada/Health Canada Pilot Project List (CEPA 1999, Section 73). Meets categorization criteria: *may present, to individuals in Canada, the greatest potential for exposure; or *are persistent or bioaccumulative in accordance with the regulations, and inherently toxic to human beings or to non-human organisms, as determined by laboratory or other studies.

Canadian Environmental Protection Act (CEPA) Priorities Substances Lists (continued): In addition, the Toluene component is on the CEPA Priority Substances 1 list, not considered as "TOXIC" under Section 64 of CEPA.

Canadian WHMIS Regulations: This product is classified as a Controlled Product, Hazard Classes B2 (Flammable Liquid), D2A (Poisonous and Infectious Material, Other Effects/Very Toxic: Teratogenicity and Embryotoxicity), and D2B (Poisonous and Infectious Material, Other effects/Toxic: Skin Irritation) as per the Controlled Product Regulations.

ADDITIONAL MEXICAN REGULATIONS:

Mexican Workplace Regulations (NOM-018-STPS-2000): This product is classified as hazardous.

16. OTHER INFORMATION

U.S. ANSI STANDARD LABELING (Precautionary Statements): DANGER! FLAMMABLE LIQUID. MAY CAUSE EYE, SKIN AND RESPIRATORY IRRITATION. VAPORS MAY CAUSE CENTRAL NERVOUS SYSTEM EFFECTS. CONTAINS COMPOUND THAT IS A SUSPECT CARCINOGEN AND REPRODUCTIVE TOXIN. MAY CAUSE SKIN SENSITIZATION. Avoid contact with eyes, skin, and clothing. Avoid breathing mist, vapors or fume. Do not taste or swallow. Wash thoroughly after handling. Keep container tightly closed. Use only with adequate ventilation. Keep away from heat and flame. Wear gloves, eye protection, respiratory protection, and appropriate body protection. FIRST-AID: In case of contact, immediately flush skin and eyes with plenty of water. Remove contaminated clothing and shoes. Get medical attention if irritation develops or persists. If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. If swallowed, do not induce vomiting. Get medical attention. IN CASE OF FIRE: Use water fog, foam, dry chemical, or CO2. IN CASE OF SPILL: Absorb spilled product with polypads or other suitable absorbing material. Place all spill residue in an appropriate container and seal. Dispose of in accordance with U.S. Federal, State, and local hazardous waste disposal regulations and those of any Harmonization.

GLOBAL HARMONIZATION SYSTEM CLASSIFICATION:

Classification: Flammable Liquid Category 2, Reproductive Toxicity Category 2, Acute Oral Toxicity Category 5, Specific Target Organ Toxicity Repeated Exposure Category 2, Skin Irritation Category 3, Eye Irritation Category 1B, Specific Target Organ Toxicity Repeated (Inhalation-Central Nervous System) Single Exposure Category 3, Skin Sensitization Category 1B

Signal Word: Danger

Precautionary Statements:

Response: P303 + P361 + P353: IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower. P370 + P378: In case of fire: Use materials appropriate for surrounding fire for extinction. P308 + P313: IF exposed or concerned: Get medical advice/attention. P305 + P351 + P338: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. P337 + P313: If eye irritation persists: Get medical advice/attention. P304 + P340: If inhaled, remove victim to fresh air and keep at rest in a position comfortable for breathing. P302 + P352: IF ON SKIN: Wash with plenty of soap and water. P333 + P313: If skin irritation or rash occurs: Get medical advice/attention. P361 + P364: Take off immediately all contaminated clothing and wash before reuse. P312: Call a POISON CENTER or doctor/physician if you feel unwell. P321: Specific treatment (remove from exposure and treat symptoms).

Disposal: P501: Dispose of contents/containers in accordance with all local, regional, national and international regulations.

Hazard Symbols/Pictograms: GHS02, GHS07, GHS08

DISCLAIMER OF EXPRESSED AND IMPLIED WARRANTIES

The information presented in this Material Safety Data Sheet is presented in good faith based on data believed to be accurate as of the date this Material Safety Data Sheet was prepared. HOWEVER, NO WARRANTY OF MERCHANTABILITY, FITNESS FOR ANY PARTICULAR PURPOSE, OR ANY OTHER WARRANTY IS EXPRESSED OR IS TO BE IMPLIED REGARDING THE ACCURACY OR COMPLETENESS OF THE INFORMATION PROVIDED ABOVE, THE RESULTS TO BE OBTAINED FROM THE USE OF THIS INFORMATION OR THE PRODUCT, THE SAFETY OF THIS PRODUCT, OR THE HAZARDS RELATED TO ITS USE. In no case shall the descriptions, information, data or designs provided be considered a part of our terms and conditions of sale.

All materials may present hazards and should be used with caution. Because many factors may affect processing or application/use, we recommend that you make tests to determine the suitability of a product for your particular purpose prior to use. No responsibility is assumed for any damage or injury resulting from abnormal use or from any failure to adhere to recommended practices or applicable federal, state, or local laws or regulations.

The information provided above, and the product, are furnished on the condition that the person receiving them shall make their own determination as to the suitability of the product for their particular purpose and on the condition that they assume the risk of their use. In addition, no authorization is given nor implied to practice any patented invention without a license.

REFERENCES AND DATA SOURCES: Contact the supplier for information.

METHODS OF EVALUATING INFORMATION FOR THE PURPOSE OF CLASSIFICATION: Bridging principles were used to classify this product.

REVISION DETAILS: May 2012: Update and revise entire MSDS to include current GHS requirements. June 2014: Revision of SDS due to formulation change.

DATE OF PRINTING: June 23, 2014
DEFINITIONS OF TERMS

A large number of abbreviations and acronyms appear on a MSDS. Some of these, which are commonly used, include the following:

KEY ACRONYMS:
CHEMTREC: Chemical Transportation Emergency Center, a 24-hour emergency information and/or emergency assistance to emergency responders.
CEILING LEVEL: The concentration that shall not be exceeded during any part of the working day.

DFG MAKs: Federal Republic of Germany Maximum Concentration Values in the workplace. Exposure limits are given as TWA (Time-Weighted Average) or PEAK (short-term exposure) values.

DFG MAK Categories: 1: Toxic substances that have shown to increase the mutation frequency in the progeny of exposed humans. 2: Germl cell mutagens that have been shown to increase the mutant frequency in the progeny of exposed mammals. 3: Substances that are suspected of being germl cell mutagens because of their genotoxic mechanisms of action in vivo; in exceptional cases, substances for which there are no in vivo data, but that are clearly mutagenic in vitro and structurally related to known in vivo mutagens. 4: Not applicable (Category 4 carcinogenic substances are those with non-genotoxic mechanisms of action. By definition, germ cell mutagens are genotoxic. Therefore, a Category 4 for germ cell mutagens cannot apply. At some time in the future, it is conceivable that a Category 4 could be established for genotoxic substances with primary targets other than DNA [e.g. purely aneugenic substances] if research results make this seem sensible.) 5: Germ cell mutagens, the potency of which is considered to be so low that, provided the MAK value is observed, their contribution to genetic risk for humans is not significant to be.

DFG MAK Pregnancy Risk Group Classification: Group A: A risk of damage to the developing embryo or fetus has been unequivocally demonstrated. Exposure of pregnant women can lead to damage of the developing organism, even when MAK and BAT (Biological Tolerance Value for Working Materials) values are observed. Group B: Currently available information indicates a risk of damage to the developing embryo or fetus must be considered to be probable. Damage to the developing organism cannot be excluded when pregnant women are exposed, even when MAK and BAT values are observed. Group C: There is no reason to fear a damage to the developing embryo or fetus when MAK and BAT values are observed.

DFG MAK Skin Irritation Classification: Group D: Classification in one of the groups A-C is not yet possible because, although the data available may indicate a trend, they are not sufficient for final evaluation.

IDILH: Immediately Dangerous to Life and Health. This level represents a concentration from which one can escape within 30 minutes without suffering escape-preventing or permanent injury.

LOQ: Limit of Quantitation
NE: Not Established. When no exposure guidelines are established, an entry of NE is made for this column.
NIC: Notice of Intended Change.
NIOSH CEILING: The exposure that shall not be exceeded during any part of the workday. If instantaneous, feasible, the ceiling shall be defined as a maximum 15 min TWA exposure (unless otherwise specified) that shall not be exceeded at any time during a workday.

NIOSH RELs: NIOSH’s Recommended Exposure Limits.

PEL: OSHA Permissible Exposure Limits. The Permissible Exposure Limit value means exactly the same as a TLV, except that it is enforceable by OSHA. The OSHA Permissible Exposure Limits are based in the 1989 PELs and the June, 1993 Air Contaminants Rule (Federal Register 58: 35338-35351 and 58: 40191). Both the current PELs and the vacated PELs are indicated. The phrase, “Vacated 1989 PEL” is placed next to the vacated value. (See Court Order.)

SKIN: Used when there is a danger of cutaneous absorption.

STEL: Short Term Exposure Limit, usually a 15-min time-weighted average (TWA) exposure that could be exceeded at any time during a workday, even if the 8-hr TWA is within the TLV-TWA, PEL-TWA or REL-TWA.

TLV: Threshold Limit Value. An airborne concentration of a substance that represents conditions under which it is generally believed that nearly all workers may be repeatedly exposed without adverse effect. The duration must be considered, including the 8-hour.

TWA: Time Weighted Average exposure concentration for a conventional 8-hour (TWA; REL) or up to a 10-hr (REL) workday and a 40-hr workweek.

Workplace Occupational Exposure Limits from the AHA.

HAZARD RATINGS:

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM HAZARD RATINGS: This rating system was developed by the National Paint and Coating Association and has been adopted by this Division to identify the degree of chemical hazards.

HEALTH HAZARD:
0 Minimal Hazard: No significant health risk, irritation of skin or eyes only anticipated.
Skin Irritation: Essentially non-irritating. Mechanical irritation may occur. PII or Draize = 0.
Eye irritation: Essentially non-irritating; minimal effects clearing in < 24 hours. Mechanical irritation may occur. Draize = 0. Oral Toxicity LD50: Rat > 5000 mg/kg. Dermal Toxicity LD50: Rat or Rabbit > 2000 mg/kg. Inhalation Toxicity 4 hrs LC50: Rat > 20 mg/l. 1 Slight Hazard: Minor reversible injury may occur; may irritate the stomach if swallowed; may defat the skin and cause existing exudate to dry up; may cause eye irritation to be slight. Draze = 0, Oral Toxicity LD50 > 100-500 mg/kg. Dermal Toxicity LD50: Rat or Rabbit > 1000-2000 mg/kg. Inhalation Toxicity LC50: 4 hrs Rat > 2400 mg/l. Dermal Toxicity: Temporary or transitory injury may occur; prolonged exposure may affect the CNS. Skin Irritation: Moderately irritating; primary irritant; sensitizer. PII or Draize = 5, with no destruction of dermal tissue. Eye irritation: Moderately to severely irritating; reversible corneal opacity; corneal involvement or irritation clearing in 8-21 days. Draize = 26-100, with reversible effects. Oral Toxicity LD50: Rat > 50-500 mg/kg. Dermal Toxicity LD50: Rat or Rabbit > 200-1000 mg/kg. Inhalation Toxicity LC50: 4 hrs Rat > 0.5-2 mg/L. 3 Serious Hazard: Major injury likely unless prompt action is taken and medical treatment is given; high level of toxicity; contact with skin or eye causes immediate and serious injury or death; may cause irreversible eye damage and/or death; may cause death in 24 hours. Draze = 26-100, with reversible effects. Oral Toxicity LD50: Rat > 5-50 mg/kg. Dermal Toxicity LD50: Rat or Rabbit > 200-2000 mg/kg. Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/L. 4 Severe Hazard: Life-threatening, major or permanent damage may result from single or repeated exposures; extremely toxic; irreversible injury may result from brief contact. Skin Irritation: Poisoning; immediate death; severe eye damage; corneal involvement or irritation clearing in less than 24 days. Draize = 40-100, with severe effects. Oral Toxicity LD50: Rat ≤ 2 mg/kg. Dermal Toxicity LD50: Rat or Rabbit ≤ 20 mg/kg. Inhalation Toxicity LC50: 4 hrs Rat ≤ 0.05 mg/L.

HAZARDOUS MATERIALS IDENTIFICATION SYSTEM HAZARD RATINGS (continued):

FLAMMABILITY HAZARD: 0 Minimal Hazard: Materials that will not burn in air when exposure to a temperature of 815.5°C (1500°F) for a period of 5 minutes. 1 Slight Hazard: Materials that must be immediately contained when ignition can occur. Ignition may cause a fire that will burn all ambient temperature conditions before ignition and combustion can occur. This usually includes the following: Materials that will burn in air when exposed to a temperature of 815.5°C (1500°F) for a period of 5 minutes or less. Pecora P-100 Primer Page 10 of 11 June 16, 2014

2 Moderate Hazard: Materials that must be moderately heated or exposed to relatively high ambient temperature before ignition can occur. In this degree, the fire would not, under normal conditions, form large flames or columns of smoke in closed container, and the fire is not expected to spread to nearby flammable materials. 3 Severe Hazard: Fire that is likely to spread to nearby flammable materials or spontaneously ignite. 4 Extreme Hazard: Materials that are classed as extreme fire hazard or have a high risk to cause significant heat generation or explosion. 5 Flash Point: Materials that, when exposed to a temperature of 22.9°C (73°F) and having a boiling point at or above 38°C (100°F) and those liquids having a flash point at point at or above 22.9°C (73°F) and below 37.8°C (100°F) (i.e. OSHA Class IA and IB). When a liquid boils at or below 37.8°C (100°F) and is classified as a 2 or 3 flammable liquid, the group that is based on the flash point is adopted by industry to identify the degree of chemical hazards.

HF: Other. Materials that may explode in the presence of water. Materials that are capable of decomposition under specified conditions and reform or that do not have a mass explosion hazard.

Inhalation Toxicity LC50: 4 hrs Rat = > 1000, LC50: Rat = > 1000, LD50: Rat = > 1000, Oral Toxicity LD50: Rat = > 1000, LD50: Rat or Rabbit = > 1000-2000 mg/kg.

Inhalation Toxicity LC50: 4 hrs Rat > 2400 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.5-2 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/l.

Inhalation Toxicity LC50: 4 hrs Rat > 0.05-0.5 mg/l.
DEFINITIONS OF TERMS (Continued)

NATIONAL FIRE PROTECTION ASSOCIATION HAZARD RATINGS:

HEALTH HAZARD: 0 Materials that, under emergency conditions, would offer no hazard beyond that of ordinary combustible materials. Gases and vapors with an LC50 for acute inhalation toxicity greater than 10,000 ppm. Dusts and mists with an LC50 for acute inhalation toxicity greater than 200 mg/L. Liquids with an LC50 for acute dermal toxicity greater than 2,000 mg/kg. Materials with an LDI50 for acute oral toxicity greater than 2,000 mg/kg. Materials essentially non-irritating to the respiratory tract, eyes, and skin. 1 Materials that, under emergency conditions, can cause significant irritation. Gases and vapors with an LC50, for acute inhalation toxicity greater than 5,000 ppm but less than or equal to 10,000 ppm. Dusts and mists with an LC50 for acute inhalation toxicity greater than 5 mg/L but less than or equal to 20 mg/L. Materials with an LD50 for acute dermal toxicity greater than 1000 mg/kg but less than or equal to 2000 mg/kg. Materials that slightly to moderately irritate the respiratory tract, eyes, and skin. Materials with an LC50 for acute inhalation toxicity greater than 5.0 mg/L but less than or equal to 20 mg/L. 2 Materials that, under emergency conditions, can cause temporary incapacitation or residual injury. Gases with an LC50 for acute inhalation toxicity greater than 3,000 ppm but less than or equal to 5,000 ppm. Any liquid that has a saturated vapor concentration at 20°C (68°F) is equal to or greater than one-fifth its LC50 for acute inhalation toxicity, if its LC50 is less than or equal to 5000 ppm and that does not meet the criteria for either degree of hazard 3 or degree of hazard 4. 3 Materials that have acute oral toxicity greater than 2 mg/kg but less than or equal to 10 mg/kg. Materials with an LC50 for acute inhalation toxicity greater than 0.5 mg/L but less than or equal to 2 mg/L. Materials with an LD50 for acute dermal toxicity greater than 40 mg/kg but less than or equal to 200 mg/kg. Materials that are corrosive to the eyes or lachrymators. Materials that are primary skin irritants or sensitizers. Materials whose LC50 for acute oral toxicity is greater than 50 mg/kg but less than or equal to 500 mg/kg. 3 Materials that, under emergency conditions, can cause serious or permanent injury. Gases and vapors with an LC50 for acute inhalation toxicity greater than 1,000 ppm but less than or equal to 3,000 ppm. Any liquid that has a saturated vapor concentration at 20°C (68°F) is equal to or greater than one-fifth its LC50 for acute inhalation toxicity, if its LC50 is less than or equal to 3000 ppm and that does not meet the criteria for any of the above categories of materials. 4 Materials that, under emergency conditions, can cause permanent injury or death. Gases and vapors with an LC50 for acute inhalation toxicity less than or equal to 1,000 ppm. Any liquid that has a saturated vapor concentration at 20°C (68°F) is equal to or greater than one-fifth its LC50 for acute inhalation toxicity, if its LC50 is less than or equal to 3000 ppm and that does not meet the criteria for any of the above categories of materials.

INSTABILITY HAZARD: 0 Materials that in themselves are normally stable, even under fire conditions. Materials that have an instantaneous power density (product of heat of reaction and reaction rate) at 250°C (482°F) below 0.01 W/mL. Materials that do not exhibit an exotherm at temperatures less than or equal to 500°C (932°F) and that have been tested by differential scanning calorimetry. Materials that in themselves are normally stable, but that can become unstable at elevated temperatures and pressures. Materials that have an instantaneous power density (product of heat of reaction and reaction rate) at 250°C (482°F) at or above 0.01 W/mL and below 10 W/mL. 1 Materials that readily undergo violent chemical change at elevated temperatures and pressures. Materials that have an instantaneous power density (product of heat of reaction and reaction rate) at 250°C (482°F) at or above 10 W/mL and below 100 W/mL. 2 Materials that are sensitive to thermal or mechanical shock at elevated temperatures and pressures. Materials that have an estimated instantaneous power density (product of heat of reaction and reaction rate) at 250°C (482°F) of 100 W/mL or greater.

FLAMMABILITY LIMITS IN AIR:

Much of the information related to fire and explosion is derived from the National Fire Protection Association (NFPA). Flash Point: Minimum temperature at which a liquid gives off sufficient vapor to form an ignitable mixture with air near the surface of the liquid or within the test vessel used. Autoignition Temperature: Minimum temperature of a solid, liquid, or gas required to initiate or cause self-sustained combustion in air in the absence of other source of ignition. LEI: Lowest concentration of a flammable vapor or gas-air mixture that will ignite and burn with a flame. UEL: Upper flammability limit. Lower flammability limit.

TOXICOLOGICAL INFORMATION:

Human and Animal Toxicology: Possible health hazards as derived from human data, animal studies, or from the results of studies with similar compounds are presented. LD50: Lethal Dose (solids) represents the dose of the material that causes death in 50% of the exposed animals. LC50: Lethal Concentration (gases) that kills 50% of the exposed animals. ppm: Concentration expressed in parts per million of air or water. mg/L: Concentration expressed in weight of substance per volume of air. mg/kg: Quantity of material, by weight, administered to a test subject, based on their body weight in kg. TdLo: Lowest dose to cause a symptom. TdL, TdLO, and TdLo or TC, Tco, LC50, and LC100 Lowest dose (or concentration) to cause lethal or toxic effects. Cancer Information: IARC: International Agency for Research on Cancer. NTP: National Toxicology Program. RTECS: Registry of Toxic Effects of Chemical Substances. IARC and NTP rate chemicals on a scale of decreasing potential to cause human cancer with rankings from 1 to 4. Substances (2A, 2B, etc.) are also used. Other Information: BEI: ACGIH Biological Exposure Indices, represent the levels of contaminants which are most likely to be observed in speccimens collected from a healthy worker who has been exposed to chemicals to the same extent as a worker with inhalation exposure to the TLV.

REPRODUCTIVE INFORMATION: A mutagen is a chemical that causes permanent changes to genetic material (DNA) such that the changes will propagate through generational lines. An embroyotoxic is a chemical that causes damage to a developing embryo (i.e. within the first eight weeks of pregnancy in humans), but the damage does not propagate across generational lines. A teratogen is a chemical that causes damage to a developing fetus, but the damage does not propagate across generational lines. A reproductive toxin is any substance that interferes in any way with the reproductive process.

ECOLOGICAL INFORMATION:

LC: Effect concentration in water. BCF: Bioccentration Factor, which is used to determine if a chemical will concentrate in life forms that consume contaminated plant or animal material. Toxicity Values (current edition): means LDLo, LC50, NOEC, and LOEC. The toxicity values are median lethal concentration of the test species.0: Lowest concentration to cause a symptom. Tco, TcL, and TcLo: Lowest concentration to cause lethal or toxic effects. Cancer Information: IARC: International Agency for Research on Cancer. NTP: National Toxicology Program. BEI: ACGIH Registry of Toxic Effects of Chemical Substances. IARC and NTP rate chemicals on a scale of decreasing potential to cause human cancer with rankings from 1 to 4. Substances (2A, 2B, etc.) are also used. Other Information: BEI: ACGIH Biological Exposure Indices, represent the levels of contaminants which are most likely to be observed in speccimens collected from a healthy worker who has been exposed to chemicals to the same extent as a worker with inhalation exposure to the TLV.

REGULATORY INFORMATION: This section explains the impact of various laws and regulations on the material.

U.S.:

EPA: U.S. Environmental Protection Agency. ACGIH: American Conference of Governmental Industrial Hygienists, a professional association that establishes exposure limits. OSHA: U.S. Department of Labor, Occupational Safety and Health Administration. NIOSH: National Institute of Occupational Safety and Health, which is the research arm of OSHA. DOT: U.S. Department of Transportation. TCA: Transport Canada. SARA: Superfund Amendments and Reauthorization Act. TSCA: Toxic Substance Control Act. CERCLA: Comprehensive Environmental Response, Compensation, and Liability Act. Marine pollutant status according to the DOT; CERCLA or Superfund; and various state regulations. This section also includes information on the precautionary warnings that appear on a material’s package label.

CANADA:
