

Application Tips

QC Release Powder II

Look below for some helpful tips so you can use QC Release Powder II to its fullest potential.

DO:

- ◆ Make sure the sub-grade is prepared as required as for any concrete slab on grade.
- ◆ Tamp and/or vibrate concrete (be careful not to overwork material), screed, then wood float to finished grade.

DO NOT:

- ◆ While QC Release Powder II may be used on vertical faces of step risers, curbs, etc., it is not practical for use on large areas of vertical surfaces.
- ◆ QC Release Powder II should remain in a dry state on the concrete surface, and should not be worked into the surface. Care should be taken not to trowel the release powder into the wet concrete.
